

- Preface p. xi
- Chapter 1 Microcomputer Systems p. 1
- 1.1 Introduction p. 1
- 1.2 Microcontroller systems p. 1
- 1.3 Microcontroller features p. 3
- 1.4 Microcontroller architectures p. 7
- 1.5 The PIC microcontroller family p. 8
- 1.6 Minimum PIC configuration p. 12
- 1.7 PIC 16F84 microcontroller p. 16
- 1.7.1 Pin configuration p. 16
- 1.7.2 OPTION_REG register p. 18
- 1.7.3 INTCON register p. 19
- 1.7.4 TRISA and PORTA registers p. 20
- 1.7.5 TRISB and PORTB registers p. 20
- 1.7.6 Timer module and TMR0 register p. 20
- 1.8 PIC16F877 microcontroller p. 21
- 1.8.1 Pin configuration p. 21
- 1.9 Using C language to program PIC microcontrollers p. 24
- 1.9.1 FED C compiler variables p. 25
- 1.9.2 Comments in programs p. 26
- 1.9.3 Arrays p. 27
- 1.9.4 Constants p. 28
- 1.9.5 Enumerated constants p. 28
- 1.9.6 Operators p. 28
- 1.9.7 Program control in FED C p. 29
- 1.9.8 Header files p. 35
- 1.9.9 PIC PORT commands p. 35
- 1.9.10 Built-in functions p. 35
- 1.9.11 Using a LCD display p. 36
- 1.9.12 Structures p. 40
- 1.9.13 Unions p. 41
- 1.9.14 User functions p. 41
- 1.9.15 Pointers p. 43
- 1.9.16 The pre-processor p. 44
- 1.10 PIC C project development tools p. 45
- 1.11 Structure of a microcontroller based C program p. 46
- 1.12 Program Description Language p. 48
- 1.12.1 Start-End p. 48
- 1.12.2 Sequencing p. 49
- 1.12.3 If-Then-Else-Endif p. 49
- 1.12.4 Do-Enddo p. 49
- 1.12.5 Repeat-Until p. 50
- 1.12.6 Select p. 51
- 1.13 Example LCD project p. 51

- 1.14 Exercises p. 53
- 1.15 Further reading p. 54
- Chapter 2 Temperature and its Measurement p. 55
- 2.1 Temperature scales p. 55
- 2.2 Types of temperature sensors p. 56
- 2.3 Measurement errors p. 59
- 2.3.1 Calibration errors p. 59
- 2.3.2 Sensor self heating p. 59
- 2.3.3 Electrical noise p. 60
- 2.3.4 Mechanical stress p. 60
- 2.3.5 Thermal coupling p. 60
- 2.3.6 Sensor time constant p. 60
- 2.3.7 Sensor leads p. 60
- 2.4 Selecting a temperature sensor p. 61
- Chapter 3 Thermocouple Temperature Sensors p. 63
- 3.1 Thermocouple types p. 66
- 3.2 Thermocouple junction mounting p. 68
- 3.3 Thermocouple insulation p. 68
- 3.3.1 Standard insulating materials p. 69
- 3.3.2 Mineral insulated thermocouples p. 69
- 3.4 Extension cables p. 69
- 3.5 Thermocouple response times p. 69
- 3.6 Thermocouple styles p. 70
- 3.7 Thermocouple temperature voltage relationships p. 71
- 3.7.1 Using thermocouple reference tables p. 71
- 3.7.2 Using power series method p. 71
- 3.7.3 Using linear approximation p. 75
- 3.8 The theory of the cold junction compensation p. 76
- 3.9 Microcontroller based practical thermocouple circuits p. 79
- 3.10 PROJECT - Measuring temperature using a thermocouple and a microcontroller p. 80
- 3.10.1 The specifications p. 80
- 3.10.2 The hardware design p. 81
- 3.10.3 The software design p. 82
- 3.11 Exercises p. 84
- Chapter 4 RTD Temperature Sensors p. 87
- 4.1 RTD principles p. 87
- 4.2 RTD types p. 88
- 4.3 RTD temperature resistance relationship p. 89
- 4.4 RTD standards p. 92
- 4.4.1 Class A standard p. 94
- 4.4.2 Class B standard p. 95
- 4.5 Practical RTD circuits p. 96
- 4.5.1 Simple current source circuit p. 96
- 4.5.2 Simple voltage source circuit p. 97

- 4.5.3 Four-wire RTD measurement p. 98
- 4.5.4 Simple RTD bridge circuit p. 98
- 4.5.5 Three-wire RTD bridge circuit p. 98
- 4.6 Microcontroller based RTD temperature measurement p. 99
- 4.7 PROJECT - Designing a microcontroller based temperature measurement system using an RTD p. 100
 - 4.7.1 Specifications p. 100
 - 4.7.2 Design p. 100
 - 4.7.3 The circuit diagram p. 101
 - 4.7.4 Operation of the circuit p. 102
 - 4.7.5 Program listing p. 102
- 4.8 Exercises p. 105
- Chapter 5 Thermistor Temperature Sensors p. 107
 - 5.1 Thermistor principles p. 107
 - 5.2 Thermistor types p. 108
 - 5.3 Self-heating p. 110
 - 5.4 Thermal time constant p. 111
 - 5.5 Thermistor temperature-resistance relationship p. 111
 - 5.5.1 Temperature-resistance table p. 111
 - 5.5.2 Steinhart-Hart equation p. 111
 - 5.5.3 Using temperature-resistance characteristic formula p. 114
 - 5.5.4 Thermistor linearization p. 116
 - 5.6 Practical thermistor circuits p. 116
 - 5.6.1 Constant current circuit p. 116
 - 5.6.2 Constant voltage circuit p. 117
 - 5.6.3 Bridge circuit p. 117
 - 5.6.4 Non-inverting operational amplifier circuit p. 118
 - 5.6.5 Inverting operational amplifier circuit p. 119
 - 5.7 Microcontroller based temperature measurement p. 119
 - 5.8 PROJECT - Designing a microcontroller based temperature measurement system using a thermistor p. 120
 - 5.8.1 Specifications p. 120
 - 5.8.2 Design p. 121
 - 5.8.3 The circuit diagram p. 122
 - 5.8.4 Operation of the circuit p. 123
 - 5.8.5 Program listing p. 124
 - 5.9 Exercises p. 126
- Chapter 6 Integrated Circuit Temperature Sensors p. 129
 - 6.1 Voltage output temperature sensors p. 130
 - 6.1.1 Applications of voltage output temperature sensors p. 131
 - 6.2 Current output temperature sensors p. 132
 - 6.2.1 Applications of current output temperature sensors p. 133
 - 6.3 Digital output temperature sensors p. 134
 - 6.3.1 Applications of digital output temperature sensors p. 135

- 6.4 PROJECT - Using a digital output sensor to measure the temperature p. 138
- 6.4.1 The hardware p. 138
- 6.4.2 The software p. 138
- 6.5 Exercises p. 142
- Chapter 7 Digital Control Systems and the z-transform p. 145
- 7.1 The sampling process p. 146
- 7.2 The z-transform p. 148
- 7.2.1 Properties of the z-transform p. 150
- 7.2.2 z-transform from the Laplace transform p. 152
- 7.3 Inverse z-transform p. 154
- 7.3.1 Power series method p. 154
- 7.3.2 Partial fraction expansion method p. 156
- 7.4 The pulse transfer function p. 157
- 7.4.1 Open-loop digital control systems p. 158
- 7.4.2 Open-loop time response p. 160
- 7.4.3 Closed-loop control systems p. 162
- 7.4.4 Closed loop time response p. 165
- 7.5 Exercises p. 168
- Chapter 8 Stability p. 171
- 8.1 Jury's stability test for small systems p. 171
- 8.2 The root-locus technique p. 175
- 8.3 Digital control algorithms p. 179
- 8.4 Temperature control using digital computers p. 180
- 8.4.1 Bang-bang control of temperature p. 183
- 8.4.2 Control of temperature using continuously variable controllers p. 184
- 8.4.2.1 Ziegler--Nichols PID tuning algorithm p. 186
- 8.5 Digital realizations p. 190
- 8.5.1 Direct programming p. 191
- 8.5.2 Serial programming p. 191
- 8.5.3 Parallel programming p. 192
- 8.5.4 Canonical programming p. 193
- 8.6 Realization of the discrete PID controller p. 194
- 8.7 Problems with the standard PID controller p. 195
- 8.8 Choosing a sampling interval p. 197
- 8.9 Exercises p. 198
- Chapter 9 Case Study: Temperature Control Project p. 201
- 9.1 Overview p. 201
- 9.2 The mathematical model p. 202
- 9.2.1 Mathematical model of the tank p. 202
- 9.2.2 Mathematical model of the heater p. 203
- 9.2.3 Mathematical model of the temperature sensor p. 207
- 9.3 The circuit diagram p. 207
- 9.4 Identification of the system p. 208
- 9.5 Pulse width output of the microcontroller p. 209

- 9.6 Design of a PI controller p. 210
- 9.6.1 The software of the PI controller p. 211
- 9.6.1.1 Results p. 214
- 9.7 Design of a PID controller p. 215
- 9.7.1 The software of the PID controller p. 216
- 9.7.1.1 Results p. 216
- 9.8 Compensating for heat losses p. 219
- 9.9 Other considerations p. 219
- 9.10 Exercises p. 219
- Appendix A Platinum RTD Sensor Resistances ($\alpha = 0.00385$) p. 221
- Appendix B ASCII Code p. 223
- Appendix C FED C Compiler Library Functions p. 227
- Glossary p. 231
- Index p. 235
