

- Preface to the second edition p. xiii
- Preface to the first edition p. xv
- 1 Introduction p. 1
- Digital television p. 1
- Why digital? p. 1
- More channels p. 3
- Wide-screen pictures p. 3
- 'Cinema' sound p. 4
- Associated services p. 4
- Conditional access p. 6
- Transmission techniques p. 6
- Receiver technology p. 6
- The future ... p. 7
- 2 Foundations of television p. 8
- A brief history of television p. 8
- The introduction of colour p. 9
- The physics of light p. 9
- Physiology of the eye p. 10
- Psychology of vision--colour perception p. 12
- Metamerism--the great colour swindle p. 13
- Persistence of vision p. 14
- The physics of sound p. 14
- Fourier p. 16
- Transients p. 16
- Physiology of the ear p. 17
- Psychology of hearing p. 18
- Masking p. 19
- Temporal masking p. 20
- Film and television p. 21
- Television p. 22
- Television signals p. 24
- H sync and V sync p. 24
- Colour television p. 26
- NTSC and PAL colour systems p. 27
- SECAM colour system p. 31
- Shadowmask tube p. 32
- Vestigial sideband modulation p. 33
- Audio for television p. 34
- NICAM 728 digital stereo sound p. 35
- Recording television signals p. 35
- Colour under p. 36
- Audio tracks p. 38
- Timecode p. 38
- Longitudinal timecode p. 38

- Vertical interval timecode p. 40
- PAL and NTSC p. 40
- User bits p. 40
- Teletext p. 40
- Analogue high definition television p. 41
- MAC p. 43
- PALplus p. 43
- 1125/60 and 1250/50 HDTV systems p. 44
- 1250/50 European HDTV p. 44
- 625-line television wide screen signalling p. 44
- The WSS signal p. 44
- Data structure p. 44
- Telecine and 'pulldown' p. 46
- 3 Digital video and audio coding p. 50
- Digital fundamentals p. 50
- Sampling theory and conversion p. 51
- Theory p. 51
- The mechanism of sampling p. 53
- Aliasing p. 54
- Quantization p. 54
- Digital-to-analogue conversion p. 55
- Jitter p. 56
- Aperture effect p. 56
- Dither p. 56
- Digital video interfaces p. 57
- Video timing reference signals (TRS) p. 59
- Clock signal p. 61
- Filter templates p. 61
- Parallel digital interface p. 62
- Serial digital interface p. 63
- HDTV serial interface p. 65
- Digital audio interfaces p. 65
- AES/EBU or IEC958 type 1 interface p. 66
- SPDIF or IEC958 type 2 interface p. 67
- Data p. 68
- Practical digital audio interface p. 70
- Toslink optical interface p. 70
- Unbalanced (75 ohm) AES interface p. 71
- Serial multi-channel audio digital interface (MADI) p. 72
- Data format p. 73
- Scrambling and synchronization p. 76
- Electrical format p. 77
- Fibre optic format p. 77
- Embedded audio in video interface p. 77

- Error detection and handling (EDH) p. 80
- EDH codeword generation p. 81
- EDH flags p. 83
- 4 Digital signal processing p. 85
  - Introduction p. 85
  - Digital manipulation p. 86
  - Digital filtering p. 86
  - Digital image processing p. 88
  - Point operations p. 88
  - Window operations p. 89
  - Transforming between time and frequency domains p. 93
  - Fourier transform p. 93
  - Phase p. 95
  - Windowing p. 96
  - 2-D Fourier transforms p. 98
  - More about digital filtering and signal processing p. 99
  - Convolution p. 100
  - Impulse response p. 100
  - FIR and IIR filters p. 101
  - Design of digital filters p. 102
  - Frequency response p. 103
  - Derivation of band-pass and high-pass filters p. 105
  - Designing an IIR filter p. 106
  - IIR filter design example p. 107
  - High-pass filter example p. 109
  - Digital frequency domain analysis--the z-transform p. 110
  - Problems with digital signal processing p. 110
- 5 Video data compression p. 112
  - Basic concepts p. 112
  - Entropy, redundancy and artefacts p. 112
  - Lossless compression p. 113
  - De-correlation p. 114
  - Lossless DPCM and lossy DPCM p. 116
  - Frame differences and motion compensation p. 117
  - Fourier transform-based methods of compression p. 119
  - Transform coding p. 119
  - A practical mix p. 123
  - JPEG p. 125
  - Motion JPEG (MJPEG) p. 127
  - MPEG p. 127
  - Levels and Profiles p. 128
  - Main profile at main level p. 129
  - Main level at 4:2:2 profile (ML@4:2:2P) p. 129
  - Frames or fields p. 129

- MPEG coding p. 131
- MPEG coding hardware p. 135
- Mosquito noise p. 135
- Statistical multiplexing p. 136
- DV, DVCAM and DVCPRO p. 137
- 6 Audio data compression p. 139
  - Compression based on logarithmic representation p. 139
  - NICAM p. 140
  - Psychoacoustic masking systems p. 140
  - MPEG layer I compression (PASC) p. 141
  - MPEG layer II audio coding (MUSICAM) p. 142
  - MPEG layer III p. 143
  - Dolby AC-3 p. 143
- 7 Digital audio production p. 145
  - Digital line-up levels and metering p. 145
    - The VU meter p. 146
    - The PPM meter p. 147
    - Opto-electronic level indication p. 148
    - Standard operating levels and line-up tones p. 149
  - Digital line-up p. 149
  - Switching and combining audio signals p. 150
  - Digital audio consoles p. 151
  - Sound mixer architecture p. 151
  - Mixer automation p. 152
  - Digital tape machines p. 153
  - Digital two-track recording p. 153
  - Digital multi-tracks p. 154
  - Digital audio workstations p. 155
  - Audio file formats p. 156
    - WAV files p. 156
    - AU files p. 157
    - AIFF and AIFC p. 157
    - MPEG p. 157
    - VOC p. 158
    - Raw PCM data p. 158
  - Surround-sound formats p. 158
    - Dolby Surround p. 158
    - Dolby digital (AC-3) p. 161
  - Rematrixing p. 161
  - Dynamic range compression p. 161
  - MPEG-II extension to multi-channel audio p. 162
  - Pro logic compatibility p. 162
  - IEC 61937 interface p. 162
  - Dynamic range compression p. 163

- Multilingual support p. 163
- Editing MPEG layer II audio p. 163
- 8 Digital video production p. 164
- Switching and combining video signals p. 164
- Digital video effects p. 166
- What is a video transition? p. 166
- The cut p. 167
- The dissolve p. 167
- The fade p. 169
- Wipes p. 169
- Split-screens p. 170
- Keys p. 170
- Posterize p. 171
- Chroma-key p. 172
- Off-line editing p. 174
- Computer video standards p. 175
- Vector and bitmap graphics--what's the difference? p. 177
- Graphic file formats p. 178
- Windows Bitmap (.BMP) p. 179
- PCX p. 179
- TARGA p. 179
- GIF p. 179
- JPEG p. 180
- Computer generated images (CGI) and animation p. 180
- Types of animation p. 181
- Software p. 182
- 2D systems p. 182
- Paint-system functions p. 182
- Compositing p. 188
- Morphing and warping p. 189
- Rotorscoping p. 190
- 3D graphics and animation p. 191
- Matrices p. 192
- Imaging p. 194
- Light p. 195
- Ray tracing p. 197
- Hard disk technology p. 198
- Winchester hard disk drive technology p. 199
- Other disk technologies p. 199
- Hard drive interface standards p. 200
- IDE drives p. 200
- SCSI p. 201
- Fibre channel p. 201
- Firewire p. 201

- RAID p. 202
- RAID 1 (mirroring) p. 203
- RAID 2 (bit striping with error correction) p. 203
- RAID 3 (bit striping with parity) p. 203
- RAID 4 (striping with fixed parity) p. 204
- RAID 5 (striping with striped parity) p. 204
- Media server p. 204
- Open media framework p. 205
- Virtual sets p. 205
- The master control room p. 205
- Automation p. 206
- Editing and switching of MPEG-II bitstreams p. 208
- The ATLANTIC Project p. 208
- 'Mole' p. 209
- 9 The MPEG multiplex p. 210
  - A 'packetized' interface p. 210
  - Deriving the MPEG-II multiplex p. 211
  - The PES packet format p. 211
  - Transport stream p. 213
  - Packet synchronization p. 213
  - Packet identification p. 213
  - Program association tables and program map tables p. 213
  - Error handling p. 214
  - The adaptation header p. 214
  - Synchronization and timing signals p. 214
  - System and program clock references p. 215
  - Presentation timestamps p. 215
  - Splicing bitstreams p. 216
  - Conditional access table p. 216
  - DVB service information p. 216
  - Conditional access p. 217
  - SimulCrypt and MultiCrypt p. 217
  - Channel coding p. 218
  - Randomization (scrambling) p. 218
  - Reed-Solomon encoding p. 219
  - Convolutional interleaving p. 220
  - Standard electrical interfaces for the MPEG-II transport stream p. 221
  - Synchronous parallel interface p. 221
  - Synchronous serial interface p. 222
  - The asynchronous serial interface (ASI) p. 223
- 10 Broadcasting digital video p. 225
  - Digital modulation p. 225
  - Quadrature amplitude modulation p. 225
  - Modulation for satellite and cable systems p. 229

- Establishing reference phase p. 230
- Convolutional or Viterbi coding p. 230
- Terrestrial transmission p. 231
- Coded orthogonal frequency division multiplexing p. 232
- Practical COFDM p. 233
- Adding a guard period to OFDM modulation p. 233
- The advantages of COFDM p. 234
- 8-VSB modulation p. 235
- 16-VSB p. 235
- Hierarchical modulation p. 237
- Interoperability p. 238
- Interoperability with ATM p. 238
- ATM cell and transport packet structures p. 239
- 11 Consumer digital technology p. 240
- Receiver technology p. 240
- Current set-top box design p. 242
- Circuit descriptions p. 243
- Set-top box--modern trends p. 253
- Digital tuner p. 253
- Incorporation of hard disk drives p. 257
- COFDM front-end for DTV-T p. 257
- D-VHS p. 258
- DVD p. 259
- Track structure p. 259
- Data rates and picture formats p. 260
- Audio p. 261
- Control p. 262
- Regional codes p. 262
- The DVD player p. 263
- CPSA (content protection system architecture) p. 264
- Analogue copy protection p. 264
- Copy generation management system (CGMS) p. 264
- Content scrambling system p. 265
- DVD Recordable (DVD-R) p. 266
- General servicing issues p. 267
- Static and safety p. 267
- Golden rules p. 267
- Equipment p. 268
- DVD faults p. 268
- PSU faults p. 269
- 12 The future p. 270
- Leaning forward and leaning back p. 270
- Hypertext and hypermedia p. 271
- HTML documents p. 271

- Anchor tags p. 272
- Images p. 272
- MPEG-IV--object oriented television coding p. 273
- Objects and scenes p. 274
- The language p. 275
- Virtual reality modelling language (VRML) p. 275
- Practical VRML files p. 282
- MPEG-IV audio p. 284
- Structured audio p. 285
- Structured audio orchestra language p. 285
- Text-to-speech systems p. 286
- Audio scenes p. 288
- MPEG-VII and metadata p. 289
- Index p. 291
