

- Preface
- Applied Mathematics: Basic arithmetic
- Fractions, decimals and percentages
- Indices and standard form
- Assignment
- 1 Calculations and evaluation of formulae
- Algebra
- Simple equations
- Transposition of formulae
- Assignment
- 2 Simultaneous equations
- Straight-line graphs
- Trigonometry
- Assignment
- 3 Areas of plane figures
- The circle
- Volumes of common solids
- Assignment
- 4 Multi-choice questions on Applied Mathematics
- Mechanical Applications: SI units and density
- Atomic structures of matter
- Speed and velocity
- Acceleration
- Force, mass and acceleration
- Assignment
- 5 Forces acting at a point
- Work, energy and power
- Simply supported beams
- Assignment
- 6 Linear and angular motion
- Friction
- Simple machines
- Assignment
- 7 The effects of forces on materials
- Linear momentum and impulse
- Assignment
- 8 Torque
- Pressure in fluids
- Heat energy and transfer
- Assignment
- 9 Thermal expansion
- Ideal gas laws
- The measurements of temperature
- Assignment

- 10 Electrical Applications: An introduction to electric circuits
- Resistance variation
- Chemical effects of electricity
- Series and parallel networks
- Assignment
- 11 Kirchhoff's laws
- Electromagnetism
- Electromagnetic induction
- Assignment
- 12 Alternating voltages and currents
- Capacitors and inductors
- Electrical measuring instruments and measurements
- Assignment
- 13 Engineering Systems: Introduction to engineering systems
- List of main formulae
- Answers to exercises
- Index
