

Table of Contents

- List of Figures p. vii
- List of Tables p. viii
- Preface p. ix
- Acknowledgments p. x
- Introduction p. 1
- Part I Highway Traffic Flow p. 7
 - 1. An Engineering Model of Traffic Flow p. 9
 - 2. Highway Traffic Flow and the 'Uneconomic' Region of Production p. 15
 - 3. An Empirical Model of Highway Traffic Flow p. 23
- Part II Commuter Choice of Tollways Versus Freeways p. 35
 - 4. Theory of Route Choice and the Value of Time p. 37
 - 5. An Empirical Study of the Choice of Tollway or Freeway p. 43
- Part III Congestion Pricing in the Short Run p. 51
 - 6. Congestion Pricing in the Short Run: the Basic Model p. 53
 - 7. Urban Highway Congestion: An Analysis of Second-Best Tolls p. 67
 - 8. Mathematical Formulation of a Multipleperiod Congestion Pricing Model p. 85
 - 9. A Simulation Study of Peak and Off-Peak Congestion Pricing p. 97
 - 10. The California SR-91 Example of Value Pricing p. 115
- Part IV Road Capacity and Pricing in the Long Run p. 133
 - 11. Road Capacity with Efficient Tolls p. 135
 - 12. The comparison of Optimal Road Capacities: no Toll Versus the Optimal Toll p. 141
 - 13. The Long-Run Two-Road Model of Traffic Congestion p. 159
 - 14. Optimal Road Capacity with Hypercongestion in the Absence of Tolls p. 171
 - 15. A Model of Demand for Traffic Density p. 181
- Appendix A Long-Run, Two-Road Model p. 191
 - 16. Demand Uncertainty, Optimal Capacity, and Congestion Tolls p. 205
 - 17. Optimal Capacity for a Bottleneck and Sub-Optimal Congestion Tolls p. 219
- Summary and Conclusions p. 233
- Author Index p. 237
- Subject Index p. 239
