

- Preface p. ix
- List of Contributors p. xi
- References p. 4
- 1 Understanding Task Analysis for Human-Computer Interaction p. 5
- 2 Working Through Task-Centered System Design p. 49
- References p. 66
- Appendix: Sample Goms Model p. 110
- References p. 115
- II It Industry Perspectives p. 175
- The Handbook of Task Analysis for Human-Computer Interaction p. xv
- References p. 45
- 4 Goms Models and Task Analysis p. 83
- I Foundations p. 1
- 3 Hierarchical Task Analysis p. 67
- References p. 81
- 7 Dutch: Designing for Users and Tasks from Concepts to Handles p. 155
- 5 Scenario-Based Task Analysis p. 117
- References p. 133
- 6 Comparing Task Models for User Interface Design p. 135
- Appendix: Overview of the Entity-Relationship-Attribute Model p. 152
- References p. 153
- References p. 172
- References p. 178
- 8 A Multicultural Approach to Task Analysis: Capturing User Requirements for a Global Software Application p. 179
- References p. 192
- 9 The Jiet Design Process for E-Business Applications p. 193
- References p. 220
- 10 User-System Interaction Scripts p. 221
- References p. 230
- 11 Task Layer Maps: a Task Analysis Technique for the Rest of Us p. 231
- Appendix: Formal Definitions of the Properties of Partial Ordering p. 245
- References p. 246
- 12 Task Analysis for E-Commerce and the Web p. 247
- References p. 261
- 13 Using Task Data in Designing the Swanwick Air Traffic Control Centre p. 263
- References p. 274
- III Human Perspectives p. 275
- References p. 278
- 14 Task Analysis Through Cognitive Archeology p. 279
- References p. 289
- 15 Cognitive Task Analysis in Interacting Cognitive Subsystems p. 291
- Appendix A a Specification of Ics p. 308
- Appendix B Glossary of Ics Terms p. 320

- References p. 324
- 16 Critical Decision Method Data Analysis p. 327
- References p. 344
- 17 Using Task Analysis for Information Requirements Specification: the Sub-Goal Template (sgt) Method p. 347
- References p. 366
- 18 Task Analysis for Error Identification p. 367
- References p. 379
- 19 Trigger Analysis: Understanding Broken Tasks p. 381
- References p. 399
- 20 The Application of Human Ability Requirements to Virtual Environment Interface Design and Evaluation p. 401
- Appendix: Definition of Human Abilities Required for Active Locomotion p. 418
- References p. 420
- 21 Activity Theory: Another Perspective on Task Analysis p. 423
- References p. 439
- IV Computing Perspectives p. 441
- References p. 444
- 22 Choosing the Right Task-Modeling Notation: a Taxonomy p. 445
- References p. 464
- 23 Environments for the Construction and Use of Task Models p. 467
- References p. 480
- 24 Concurtasktrees: an Engineered Notation for Task Models p. 483
- References p. 500
- 25 Using Formal Specification Techniques for the Modeling of Tasks and the Generation of Human-Computer User Interface Specifications p. 503
- References p. 527
- 26 One Goal, Many Tasks, Many Devices: from Abstract User Task Specification to User Interfaces p. 531
- References p. 550
- 27 Linking Task and Dialogue Modeling: Toward an Integrated Software Engineering Method p. 551
- References p. 565
- V Today and Tomorrow p. 567
- Reference p. 568
- 28 The Psychology of Task Analysis Today p. 569
- References p. 583
- 29 Experiences People Value: the New Frontier of Task Analysis p. 585
- References p. 601
- 30 Wishing on a Star: the Future of Task Analysis p. 603
- References p. 618
- Author Index p. 621
- Subject Index p. 631
