

Table of Contents

- Special Features p. xv
- List of Topics p. xvii
- Acknowledgments p. xxxix
- A Note to the Reader p. xliii
- Part I Introduction to the Cell
- 1. The Evolution of the Cell p. 3
- 2. Small Molecules, Energy, and Biosynthesis p. 41
- 3. Macromolecules: Structure, Shape, and Information p. 89
- 4. How Cells Are Studied p. 139
- Part II Molecular Genetics
- 5. Protein Function p. 195
- 6. Basic Genetic Mechanisms p. 223
- 7. Recombinant DNA Technology p. 291
- 8. The Cell Nucleus p. 335
- 9. Control of Gene Expression p. 401
- Part III Internal Organization of the Cell
- 10. Membrane Structure p. 477
- 11. Membrane Transport of Small Molecules and the Ionic Basis of Membrane Excitability p. 507
- 12. Intracellular Compartments and Protein Sorting p. 551
- 13. Vesicular Traffic in the Secretory and Endocytic Pathways p. 599
- 14. Energy Conversion: Mitochondria and Chloroplasts p. 653
- 15. Cell Signaling p. 721
- 16. The Cytoskeleton p. 787
- 17. The Cell-Division Cycle p. 863
- 18. The Mechanics of Cell Division p. 911
- Part IV Cells in Their Social Context
- 19. Cell Junctions, Cell Adhesion, and the Extracellular Matrix p. 949
- 20. Germ Cells and Fertilization p. 1011
- 21. Cellular Mechanisms of Development p. 1037
- 22. Differentiated Cells and the Maintenance of Tissues p. 1139
- 23. The Immune System p. 1195
- 24. Cancer p. 1255
- Glossary p. 1
- Index p. 1
