

Table of Contents

- Preface p. iii
- Unit Conversion Factors p. xvi
- 1. Basic Concepts p. 1
 - I. Fundamentals p. 1
 - A. Basic Laws p. 1
 - B. Experience p. 2
 - II. Objective p. 2
 - III. Phenomenological Rate or Transport Laws p. 3
 - A. Fourier's Law of Heat Conduction p. 4
 - B. Fick's Law of Diffusion p. 5
 - C. Ohm's Law of Electrical Conductivity p. 5
 - D. Newton's Law of Viscosity p. 6
 - IV. The "System" p. 9
 - V. Turbulent Macroscopic (Convective) Transport Models p. 10
 - Problems p. 11
 - Notation p. 13
- 2. Dimensional Analysis and Scale-up p. 15
 - I. Introduction p. 15
 - II. Units and Dimensions p. 16
 - A. Dimensions p. 16
 - B. Units p. 18
 - C. Conversion Factors p. 19
 - III. Conservation of Dimensions p. 20
 - A. Numerical Values p. 21
 - B. Consistent Units p. 22
 - IV. Dimensional Analysis p. 22
 - A. Pipeline Analysis p. 25
 - B. Uniqueness p. 28
 - C. Dimensionless Variables p. 28
 - D. Problem Solution p. 29
 - E. Alternative Groups p. 29
 - V. Scale-Up p. 30
 - VI. Dimensionless Groups in Fluid Mechanics p. 35
 - VII. Accuracy and Precision p. 35
 - Problems p. 40
 - Notation p. 52
- 3. Fluid Properties in Perspective p. 55
 - I. Classification of Materials and Fluid Properties p. 55
 - II. Determination of Fluid Viscous (Rheological) Properties p. 59
 - A. Cup-and-Bob (Couette) Viscometer p. 60
 - B. Tube Flow (Poiseuille) Viscometer p. 63
 - III. Types of Observed Fluid Behavior p. 64
 - A. Newtonian Fluid p. 65
 - B. Bingham Plastic Model p. 65

- C. Power Law Model p. 66
- D. Structural Viscosity Models p. 67
- IV. Temperature Dependence of Viscosity p. 71
- A. Liquids p. 71
- B. Gases p. 72
- V. Density p. 72
- Problems p. 73
- Notation p. 83
- References p. 84
- 4. Fluid Statics p. 85
- I. Stress and Pressure p. 85
- II. The Basic Equation of Fluid Statics p. 86
- A. Constant Density Fluids p. 88
- B. Ideal Gas--Isothermal p. 89
- C. Ideal Gas--Isentropic p. 90
- D. The Standard Atmosphere p. 90
- III. Moving Systems p. 91
- A. Vertical Acceleration p. 91
- B. Horizontally Accelerating Free Surface p. 92
- C. Rotating Fluid p. 93
- IV. Buoyancy p. 94
- V. Static Forces on Solid Boundaries p. 94
- Problems p. 96
- Notation p. 104
- 5. Conservation Principles p. 105
- I. The System p. 105
- II. Conservation of Mass p. 106
- A. Macroscopic Balance p. 106
- B. Microscopic Balance p. 107
- III. Conservation of Energy p. 108
- A. Internal Energy p. 110
- B. Enthalpy p. 112
- IV. Irreversible Effects p. 113
- A. Kinetic Energy Correction p. 116
- V. Conservation of Momentum p. 120
- A. One-Dimensional Flow in a Tube p. 121
- B. The Loss Coefficient p. 123
- C. Conservation of Angular Momentum p. 127
- D. Moving Boundary Systems and Relative Motion p. 128
- E. Microscopic Momentum Balance p. 130
- Problems p. 134
- Notation p. 146
- 6. Pipe Flow p. 149
- I. Flow Regimes p. 149
- II. General Relations for Pipe Flows p. 151
- A. Energy Balance p. 151

- B. Momentum Balance p. 152
- C. Continuity p. 153
- D. Energy Dissipation p. 153
- III. Newtonian Fluids p. 154
- A. Laminar Flow p. 154
- B. Turbulent Flow p. 155
- C. All Flow Regimes p. 164
- IV. Power Law Fluids p. 164
- A. Laminar Flow p. 165
- B. Turbulent Flow p. 166
- C. All Flow Regimes p. 166
- V. Bingham Plastics p. 167
- A. Laminar Flow p. 168
- B. Turbulent Flow p. 169
- C. All Reynolds Numbers p. 169
- VI. Pipe Flow Problems p. 169
- A. Unknown Driving Force p. 170
- B. Unknown Flow Rate p. 172
- C. Unknown Diameter p. 174
- D. Use of Tables p. 177
- Notation p. 192
- VII. Tube Flow (Poiseuille) Viscometer p. 177
- VIII. Turbulent Drag Reduction p. 178
- Problems p. 184
- References p. 193
- 7. Internal Flow Applications p. 195
- I. Noncircular Conduits p. 195
- A. Laminar Flows p. 195
- B. Turbulent Flows p. 198
- II. Most Economical Diameter p. 200
- A. Newtonian Fluids p. 203
- B. Non-Newtonian Fluids p. 205
- III. Friction Loss in Valves and Fittings p. 206
- A. Loss Coefficient p. 207
- B. Equivalent L/D Method p. 207
- C. Crane Method p. 208
- D. 2-K (Hooper) Method p. 209
- E. 3-K (Darby) Method p. 209
- IV. Non-Newtonian Fluids p. 214
- V. Pipe Flow Problems with Fittings p. 215
- A. Unknown Driving Force p. 216
- B. Unknown Flow Rate p. 217
- C. Unknown Diameter p. 218
- VI. Slack Flow p. 221
- VII. Pipe Networks p. 225
- Problems p. 228

- Notation p. 237
- References p. 238
- 8. Pumps and Compressors p. 239
 - I. Pumps p. 239
 - A. Positive Displacement Pumps p. 239
 - B. Centrifugal Pumps p. 240
 - II. Pump Characteristics p. 241
 - III. Pumping Requirements and Pump Selection p. 243
 - A. Required Head p. 244
 - B. Composite Curves p. 245
 - IV. Cavitation and Net Positive Suction Head (NPSH) p. 247
 - A. Vapor Lock and Cavitation p. 247
 - B. NPSH p. 248
 - C. Specific Speed p. 249
 - D. Suction Specific Speed p. 250
 - V. Compressors p. 252
 - A. Isothermal Compression p. 254
 - B. Isentropic Compression p. 254
 - C. Staged Operation p. 255
 - D. Efficiency p. 256
 - Problems p. 256
 - Notation p. 265
 - References p. 266
- 9. Compressible Flows p. 267
 - I. Gas Properties p. 267
 - A. Ideal Gas p. 267
 - B. The Speed of Sound p. 268
 - II. Pipe Flow p. 270
 - A. Isothermal Flow p. 271
 - E. Ideal Adiabatic Flow p. 277
 - B. Adiabatic Flow p. 273
 - C. Choked Flow p. 273
 - D. The Expansion Factor p. 275
 - III. Generalized Expressions p. 279
 - A. Governing Equations p. 279
 - B. Applications p. 281
 - C. Solution of High-Speed Gas Problems p. 283
 - Problems p. 286
 - Notation p. 290
 - References p. 291
- 10. Flow Measurement and Control p. 293
 - I. Scope p. 293
 - II. The Pitot Tube p. 293
 - III. The Venturi and Nozzle p. 295
 - IV. The Orifice Meter p. 304
 - A. Incompressible Flow p. 305

- B. Compressible Flow p. 306
- V. Loss Coefficient p. 308
- VI. Orifice Problems p. 310
- A. Unknown Pressure Drop p. 311
- B. Unknown Flow Rate p. 311
- C. Unknown Diameter p. 312
- VII. Control Valves p. 312
- A. Valve Characteristics p. 313
- B. Valve Sizing Relations p. 314
- C. Compressible Fluids p. 327
- D. Viscosity Correction p. 330
- Problems p. 333
- Notation p. 338
- References p. 339
- 11. External Flows p. 341
- I. Drag Coefficient p. 341
- A. Stokes Flow p. 342
- B. Form Drag p. 343
- C. All Reynolds Numbers p. 343
- D. Cylinder Drag p. 344
- E. Boundary Layer Effects p. 345
- II. Falling Particles p. 347
- A. Unknown Velocity p. 348
- B. Unknown Diameter p. 349
- C. Unknown Viscosity p. 349
- III. Correction Factors p. 350
- A. Wall Effects p. 350
- B. Drops and Bubbles p. 351
- IV. Non-Newtonian Fluids p. 352
- A. Power Law Fluids p. 352
- B. Wall Effects p. 357
- C. Carreau Fluids p. 358
- D. Bingham Plastics p. 358
- Problems p. 361
- Notation p. 363
- References p. 364
- 12. Fluid-Solid Separations by Free Settling p. 365
- I. Fluid-Solid Separations p. 365
- II. Gravity Settling p. 366
- III. Centrifugal Separation p. 367
- A. General Characteristics p. 375
- A. Fluid-Solid Separation p. 367
- B. Separation of Immiscible Liquids p. 371
- IV. Cyclone Separations p. 375
- B. Aerocyclones p. 376
- C. Hydrocyclones p. 382

- Problems p. 385
- Notation p. 389
- References p. 390
- 13. Flow in Porous Media p. 391
 - I. Description of Porous Media p. 391
 - A. Hydraulic Diameter p. 392
 - B. Porous Medium Friction Factor p. 393
 - C. Porous Medium Reynolds Number p. 394
 - II. Friction Loss in Porous Media p. 394
 - A. Laminar Flow p. 394
 - B. Turbulent Flow p. 395
 - C. All Reynolds Numbers p. 395
 - III. Permeability p. 395
 - IV. Multidimensional Flow p. 396
 - V. Packed Columns p. 398
 - VI. Filtration p. 401
 - A. Governing Equations p. 401
 - B. Constant Pressure Operation p. 405
 - C. Constant Flow Operation p. 406
 - D. Cycle Time p. 406
 - E. Plate-and-Frame Filters p. 407
 - F. Rotary Drum Filter p. 408
 - G. Compressible Cake p. 408
 - Problems p. 409
 - Notation p. 417
 - References p. 418
- 14. Fluidization and Sedimentation p. 419
 - I. Fluidization p. 419
 - A. Governing Equations p. 420
 - B. Minimum Bed Voidage p. 421
 - C. Nonspherical Particles p. 421
 - II. Sedimentation p. 423
 - A. Hindered Settling p. 423
 - B. Fine Particles p. 425
 - C. Coarse Particles p. 428
 - D. All Flow Regimes p. 428
 - III. Generalized Sedimentation/Fluidization p. 430
 - IV. Thickening p. 430
 - Problems p. 436
 - Notation p. 441
 - References p. 442
- 15. Two-Phase Flow p. 443
 - I. Scope p. 443
 - II. Definitions p. 444
 - III. Fluid-Solid Two-Phase Pipe Flows p. 447
 - A. Pseudohomogeneous Flows p. 447

- B. Heterogeneous Liquid-Solid Flows p. 449
- C. Pneumatic Solids Transport p. 454
- IV. Gas-Liquid Two-Phase Pipe Flow p. 459
- A. Flow Regimes p. 459
- Problems p. 474
- Notation p. 475
- References p. 477
- Appendixes
- A. Viscosities and Other Properties of Gases and Liquids p. 479
- B. Generalized Viscosity Plot p. 499
- C. Properties of Gases p. 501
- D. Pressure-Enthalpy Diagrams for Various Compounds p. 505
