

- Preface p. v
- Part I. Thin Plates
- 1 Introduction p. 1
- 1.1 General p. 1
- 1.2 History of Plate Theory Development p. 4
- 1.3 General Behavior of Plates p. 7
- 1.4 Survey of Elasticity Theory p. 8
- References p. 14
- 2 The Fundamentals of the Small-Deflection Plate Bending Theory p. 17
- 2.1 Introduction p. 17
- 2.2 Strain-Curvature Relations (Kinematic Equations) p. 17
- 2.3 Stresses, Stress Resultants, and Stress Couples p. 20
- 2.4 The Governing Equation for Deflections of Plates in Cartesian Coordinates p. 24
- 2.5 Boundary Conditions p. 27
- 2.6 Variational Formulation of Plate Bending Problems p. 36
- Problems p. 41
- References p. 42
- 3 Rectangular Plates p. 43
- 3.1 Introduction p. 43
- 3.2 The Elementary Cases of Plate Bending p. 43
- 3.3 Navier's Method (Double Series Solution) p. 47
- 3.4 Rectangular Plates Subjected to a Concentrated Lateral Force P p. 54
- 3.5 Levy's Solution (Single Series Solution) p. 60
- 3.6 Continuous Plates p. 71
- 3.7 Plates on an Elastic Foundation p. 76
- 3.8 Plates with Variable Stiffness p. 81
- 3.9 Rectangular Plates Under Combined Lateral and Direct Loads p. 84
- 3.10 Bending of Plates with Small Initial Curvature p. 88
- Problems p. 90
- References p. 92
- 4 Circular Plates p. 95
- 4.1 Introduction p. 95
- 4.2 Basic Relations in Polar Coordinates p. 95
- 4.3 Axisymmetric Bending of Circular Plates p. 98
- 4.4 The Use of Superposition for the Axisymmetric Analysis of Circular Plates p. 109
- 4.5 Circular Plates on Elastic Foundation p. 113
- 4.6 Asymmetric Bending of Circular Plates p. 116
- 4.7 Circular Plates Loaded by an Eccentric Lateral Concentrated Force p. 119
- 4.8 Circular Plates of Variable Thickness p. 122
- Problems p. 128
- References p. 132
- 5 Bending of Plates of Various Shapes p. 133
- 5.1 Introduction p. 133
- 5.2 Elliptical Plates p. 133
- 5.3 Sector-Shaped Plates p. 135
- 5.4 Triangular Plates p. 137

- 5.5 Skew Plates p. 139
- Problems p. 140
- References p. 141
- 6 Plate Bending by Approximate and Numerical Methods p. 143
- 6.1 Introduction p. 143
- 6.2 The Finite Difference Method (FDM) p. 144
- 6.3 The Boundary Collocation Method (BCM) p. 152
- 6.4 The Boundary Element Method (BEM) p. 156
- 6.5 The Galerkin Method p. 166
- 6.6 The Ritz Method p. 171
- 6.7 The Finite Element Method (FEM) p. 175
- Problems p. 186
- References p. 188
- 7 Advanced Topics p. 191
- 7.1 Thermal Stresses in Plates p. 191
- 7.2 Orthotropic and Stiffened Plates p. 197
- 7.3 The Effect of Transverse Shear Deformation on the Bending of Elastic Plates p. 207
- 7.4 Large-Deflection Theory of Thin Plates p. 215
- 7.5 Multilayered Plates p. 231
- 7.6 Sandwich Plates p. 233
- Problems p. 237
- References p. 239
- 8 Buckling of Plates p. 241
- 8.1 Introduction p. 241
- 8.2 General Postulations of the Theory of Stability of Plates p. 241
- 8.3 The Equilibrium Method p. 245
- 8.4 The Energy Method p. 255
- 8.5 Buckling Analysis of Orthotropic and Stiffened Plates p. 259
- 8.6 Postbuckling Behavior of Plates p. 265
- 8.7 Buckling of Sandwich Plates p. 270
- Problems p. 272
- References p. 273
- 9 Vibration of Plates p. 275
- 9.1 Introduction p. 275
- 9.2 Free Flexural Vibrations of Rectangular Plates p. 276
- 9.3 Approximate Methods in Vibration Analysis p. 278
- 9.4 Free Flexural Vibrations of Circular Plates p. 284
- 9.5 Forced Flexural Vibrations of Plates p. 286
- Problems p. 288
- References p. 289
- Part II. Thin Shells
- 10 Introduction to the General Linear Shell Theory p. 291
- 10.1 Shells in Engineering Structures p. 291
- 10.2 General Definitions and Fundamentals of Shells p. 293
- 10.3 Brief Outline of the Linear Shell Theories p. 294
- 10.4 Loading-Carrying Mechanism of Shells p. 299

- References p. 300
- 11 Geometry of the Middle Surface p. 303
 - 11.1 Coordinate System of the Surface p. 303
 - 11.2 Principal Directions and Lines of Curvature p. 304
 - 11.3 The First and Second Quadratic Forms of Surfaces p. 307
 - 11.4 Principal Curvatures p. 310
 - 11.5 Unit Vectors p. 311
 - 11.6 Equations of Codazzi and Gauss. Gaussian Curvature p. 312
 - 11.7 Classification of Shell Surfaces p. 313
 - 11.8 Specialization of Shell Geometry p. 316
 - Problems p. 324
 - References p. 324
- 12 The General Linear Theory of Shells p. 325
 - 12.1 Basic Assumptions p. 325
 - 12.2 Kinematics of Shells p. 326
 - 12.3 Statics of Shells p. 333
 - 12.4 Strain Energy of Shells p. 340
 - 12.5 Boundary Conditions p. 341
 - 12.6 Discussion of the Governing Equations of the General Linear Shell Theory p. 344
 - 12.7 Types of State of Stress for Thin Shells p. 346
 - Problems p. 347
 - References p. 347
- 13 The Membrane Theory of Shells p. 349
 - 13.1 Preliminary Remarks p. 349
 - 13.2 The Fundamental Equations of the Membrane Theory of Thin Shells p. 350
 - 13.3 Applicability of the Membrane Theory p. 351
 - 13.4 The Membrane Theory of Shells of Revolution p. 352
 - 13.5 Symmetrically Loaded Shells of Revolution p. 356
 - 13.6 Membrane Analysis of Cylindrical and Conical Shells p. 361
 - 13.7 The Membrane Theory of Shells of an Arbitrary Shape in Cartesian Coordinates p. 368
 - Problems p. 371
 - References p. 372
- 14 Application of the Membrane Theory to the Analysis of Shell Structures p. 373
 - 14.1 Membrane Analysis of Roof Shell Structures p. 373
 - 14.2 Membrane Analysis of Liquid Storage Facilities p. 390
 - 14.3 Axisymmetric Pressure Vessels p. 402
 - Problems p. 405
 - References p. 409
- 15 Moment Theory of Circular Cylindrical Shells p. 411
 - 15.1 Introduction p. 411
 - 15.2 Circular Cylindrical Shells Under General Loads p. 412
 - 15.3 Axisymmetrically Loaded Circular Cylindrical Shells p. 421
 - 15.4 Circular Cylindrical Shell of Variable Thickness Under Axisymmetric Loading p. 443
 - Problems p. 446

- References p. 448
- 16 The Moment Theory of Shells of Revolution p. 449
- 16.1 Introduction p. 449
- 16.2 Governing Equations p. 450
- 16.3 Shells of Revolution Under Axisymmetrical Loads p. 454
- 16.4 Approximate Method for Solution of the Governing Equations (16.30) p. 460
- 16.5 Axisymmetric Spherical Shells, Analysis of the State of Stress at the Spherical-to-Cylindrical Junction p. 464
- 16.6 Axisymmetrically Loaded Conical Shells p. 475
- 16.7 Axisymmetric Deformation of Toroidal Shells p. 478
- Problems p. 479
- References p. 481
- 17 Approximate Theories of Shell Analysis and Their Applications p. 483
- 17.1 Introduction p. 483
- 17.2 The Semi-Membrane Theory of Cylindrical Shells p. 483
- 17.3 The Donnell-Mushtari-Vlasov Theory of Thin Shells p. 494
- 17.4 Theory of Shallow Shells p. 497
- 17.5 The Theory of Edge Effect p. 507
- Problems p. 511
- References p. 514
- 18 Advanced Topics p. 515
- 18.1 Thermal Stresses in Thin Shells p. 515
- 18.2 The Geometrically Nonlinear Shell Theory p. 522
- 18.3 Orthotropic and Stiffened Shells p. 531
- 18.4 Multilayered Shells p. 538
- 18.5 Sandwich Shells p. 541
- 18.6 The Finite Element Representations of Shells p. 543
- 18.7 Approximate and Numerical Methods for Solution of Nonlinear Equations p. 553
- Problems p. 561
- References p. 562
- 19 Buckling of Shells p. 565
- 19.1 Introduction p. 565
- 19.2 Basic Concepts of Thin Shells Stability p. 565
- 19.3 Linear Buckling Analysis of Circular Cylindrical Shells p. 573
- 19.4 Postbuckling Analysis of Circular Cylindrical Shells p. 585
- 19.5 Buckling of Orthotropic and Stiffened Cylindrical Shells p. 590
- 19.6 Stability of Cylindrical Sandwich Shells p. 595
- 19.7 Stability of Shallow Shells Under External Normal Pressure p. 597
- 19.8 Buckling of Conical Shells p. 599
- 19.9 Buckling of Spherical Shells p. 600
- 19.10 Design Stability Analysis p. 602
- Problems p. 606
- References p. 607
- 20 Vibrations of Shells p. 609
- 20.1 Introduction p. 609
- 20.2 Free Vibrations of Cylindrical Shells p. 610

- 20.3 Free Vibrations of Conical Shells p. 618
- 20.4 Free Vibrations of Shallow Shells p. 619
- 20.5 Free Vibrations of Stiffened Shells p. 622
- 20.6 Forced Vibrations of Shells p. 624
- Problems p. 627
- References p. 627
- Appendix A. Some Reference Data p. 629
- A.1 Typical Properties of Selected Engineering Materials at Room Temperatures (U.S. Customary Units) p. 630
- A.2 Typical Properties of Selected Engineering Materials at Room Temperatures (International System (SI) Units) p. 631
- A.3 Units and Conversion Factors p. 632
- A.4 Some Useful Data p. 632
- A.5 Typical Values of Allowable Loads p. 632
- A.6 Failure Criteria p. 632
- Appendix B. Fourier Series Expansion p. 635
- B.1 Dirichlet's Conditions p. 635
- B.2 The Series Sum p. 635
- B.3 Coefficients of the Fourier Series p. 636
- B.4 Modification of Relations for the Coefficients of Fourier's Series p. 636
- B.5 The Order of the Fourier Series Coefficients p. 637
- B.6 Double Fourier Series p. 639
- B.7 Sharpening of Convergence of the Fourier Series p. 640
- References p. 640
- Appendix C. Verification of Relations of the Theory of Surfaces p. 641
- C.1 Geometry of Space Curves p. 641
- C.2 Geometry of a Surface p. 643
- C.3 Derivatives of Unit Coordinate Vectors p. 645
- C.4 Verification of Codazzi and Gauss Equations p. 649
- Appendix D. Derivation of the Strain-Displacement Relations p. 651
- D.1 Variation of the Displacements Across the Shell Thickness p. 651
- D.2 Strain Components of the Shell p. 653
- Appendix E. Verification of Equilibrium Equations p. 655
- Index p. 659
