

- Preface to the Third Edition p. v
- Preface to the Second Edition p. vii
- Preface to the First Edition p. ix
- 1. Introduction p. 1
- 2. Stoichiometry p. 5
- I. Units and Fundamental Relationships p. 5
- A. Units p. 5
- B. Gas Laws p. 5
- C. Energy p. 10
- II. Systems Analysis p. 19
- A. General Approach p. 19
- B. Analyses p. 21
- III. Material Balances p. 29
- A. Balances Based on Fuel Analysis p. 29
- B. Balances Based on Flue Gas Analysis p. 33
- C. Cross-Checking Between Fuel and Flue Gas Analysis p. 35
- IV. Energy Balances p. 35
- V. Equilibrium p. 42
- VI. Combustion Kinetics p. 49
- A. Introduction to Kinetics p. 51
- B. Kinetics of Carbon Monoxide Oxidation p. 56
- C. Kinetics of Soot Oxidation p. 60
- D. Kinetics of Waste Pyrolysis and Oxidation p. 61
- 3. Selected Topics on Combustion Processes p. 73
- I. Gaseous Combustion p. 73
- A. The Premixed (Bunsen) Laminar Flame p. 74
- B. The Diffusion Flame p. 74
- II. Liquid Combustion p. 77
- A. Pool Burning p. 77
- B. Droplet Burning p. 79
- III. Solid Combustion p. 83
- A. Thermal Decomposition p. 85
- B. Particle Burning Processes p. 97
- C. Mass Burning Processes p. 99
- 4. Waste Characterization p. 101
- I. General p. 105
- A. Chemistry p. 105
- B. Heat of Combustion p. 106
- C. Ash Fusion Characteristics p. 109
- D. Smoking Tendency p. 114
- II. Solid Waste p. 115
- A. Solid Waste Composition p. 116
- B. Solid Waste Properties p. 123
- III. Biological Wastewater Sludge p. 148
- A. Sludge Composition p. 150
- B. Sludge Properties p. 150

- 5. Combustion System Enclosures and Heat Recovery p. 159
 - I. Enclosures p. 159
 - A. Refractory Enclosure Systems p. 160
 - B. Water-Cooled Enclosures and Heat Recovery Systems p. 177
 - II. Heat Transfer p. 189
 - A. Conduction p. 189
 - B. Convection p. 192
 - C. Radiation p. 192
 - D. Heat Transfer Implications in Design p. 193
 - III. Slagging and Fouling p. 194
- 6. Fluid Flow Considerations in Incinerator Applications p. 197
 - I. Driven Flow p. 197
 - A. Jet Flow p. 197
 - B. Swirling Flows p. 230
 - II. Induced Flow p. 237
 - A. Jet Recirculation p. 238
 - B. Buoyancy p. 243
 - III. Mixing and Residence Time p. 245
 - A. Fundamental Distribution Relationships p. 245
 - B. Common Distribution Functions p. 246
 - C. Failure Modes p. 246
 - D. Residence Time Scenarios p. 247
- 7. Materials Preparation and Handling p. 251
 - I. Solid Wastes p. 251
 - A. General p. 251
 - B. Pit and Crane Handling of Solid Wastes p. 252
 - C. Size Reduction of Municipal Solid Wastes p. 255
 - D. Conveying of Solid Wastes p. 259
 - E. Size Classification and Screening p. 265
 - F. Ferrous Metal Separation p. 267
 - II. Sludge Handling p. 268
 - A. General p. 268
 - B. Sludge Pumping in Pipes p. 269
- 8. Incineration Systems for Municipal Solid Wastes p. 273
 - I. Performance Objectives p. 274
 - A. Throughput and Refuse Heat Content p. 275
 - B. The Firing Diagram: The Overall Process Envelope p. 277
 - C. Plant Availability p. 277
 - II. Site Design Considerations p. 280
 - A. Site Grading p. 280
 - B. Site Drainage p. 281
 - C. Site Traffic and Road Considerations p. 281
 - III. Collection and Delivery of Refuse p. 281
 - IV. Refuse Handling and Storage p. 283
 - A. Tipping Floor-Based Waste Storage and Reclaim Systems p. 283
 - B. Pit and Crane-Based Waste Storage and Reclaim Systems p. 284

- C. Bin Storage and Reclaim Systems for RDF p. 285
- V. Size Control and Salvage p. 286
- VI. Incinerator Feed Systems p. 286
- A. Feed Systems for Floor Dump Receipt and Storage p. 286
- B. Feed Systems for Pit and Crane Receipt and Storage Systems p. 287
- VII. Grates and Hearths p. 293
- A. Stationary Hearth p. 293
- B. Rotary Kiln p. 293
- C. Stationary Grates p. 294
- D. Mechanical Grates: Batch Operations p. 294
- E. Mechanical Grates: Continuous Operations p. 295
- F. O'Conner Rotary Combustor (Kiln) p. 302
- G. Fluid Bed Systems p. 302
- VIII. Incinerator Furnace Enclosures p. 303
- A. Refractory Enclosures p. 304
- B. Other Enclosure-Related Design Considerations p. 306
- IX. Energy Markets and Energy Recovery p. 312
- A. Market Size p. 312
- B. Market Type p. 313
- C. Market Reliability p. 313
- D. Revenue Reliability p. 314
- X. Combustion Air p. 314
- A. Underfire Air p. 314
- B. Overfire Air p. 315
- C. Secondary Air p. 315
- D. Combustion Air Fans p. 316
- E. Air Preheat p. 316
- XI. Ash Removal and Handling p. 318
- A. Overview of Ash Problems p. 318
- B. Ash Properties p. 319
- C. Bottom Ash p. 324
- D. Siftings p. 327
- E. Fly Ash p. 327
- F. Materials Recovery from Ash p. 327
- XII. Flue Gas Conditioning p. 330
- A. Cooling by Water Evaporation p. 330
- B. Cooling by Air Dilution p. 335
- C. Cooling by Heat Withdrawal p. 335
- D. Steam Plumes p. 336
- XIII. Environmental Pollution Control p. 338
- A. Air Pollution p. 339
- B. Water Pollution p. 342
- C. Noise Pollution p. 343
- XIV. Induced Draft Fan p. 343
- A. Fan Types p. 343
- B. Inlet and Outlet Connections p. 344

- C. Fan Control p. 344
- XV. Incinerator Stacks p. 345
- XVI. Refuse-Derived Fuel Systems p. 347
- A. RDF Processing p. 349
- B. RDF Combustion Systems p. 349
- XVII. Instrumentation and Control p. 357
- A. Instrumentation and Control System Design Approach p. 357
- B. Process Measurements and Field Instruments p. 358
- C. Control System Levels p. 359
- D. General Control Philosophy p. 361
- E. Portable Instruments p. 369
- F. Summary p. 370
- XVIII. Operations p. 370
- A. Mass Burn Incineration p. 370
- B. RDF Incineration p. 370
- 9. Incineration Systems for Sludge Wastes p. 375
- I. Multiple-Hearth Furnace (MHF) Systems p. 377
- A. Process Characteristics p. 377
- B. Process Relationships p. 383
- II. Fluid Bed Systems p. 389
- A. Process Characteristics p. 391
- B. Process Relationships (Oxidizing Mode) p. 395
- C. Operating Characteristics p. 403
- D. General Environmental Considerations p. 405
- III. Slagging Combustion Systems for Biological Sludge p. 406
- A. Kubota System p. 406
- B. Itoh Takuma System p. 407
- 10. Incineration Systems for Liquid and Gaseous Wastes p. 409
- I. Liquid Waste Incinerators p. 409
- A. Liquid Storage p. 409
- B. Atomization p. 410
- C. Ignition Tiles p. 414
- D. Combustion Space p. 415
- E. Incinerator Types p. 416
- II. Incinerators for Gases (Afterburners) p. 416
- A. Energy Conservation Impacts on Afterburner Design p. 417
- B. Current Afterburner Engineering Technology p. 419
- C. Afterburner Systems p. 424
- D. Potential Applications p. 433
- III. Operations and Safety p. 434
- 11. Incineration Systems for Hazardous Wastes p. 437
- I. General p. 437
- A. Receiving and Storage Systems p. 439
- B. Firing Systems p. 442
- C. Control Systems p. 445
- D. Refractory p. 446

- E. Air Pollution Control for Hazardous Waste Incinerators p. 447
- F. Evaluation Tests and POHC Selection p. 448
- II. Rotary Kiln Systems p. 451
 - A. Sludge Incineration Applications p. 454
 - B. Solid Waste Incineration Applications p. 455
- III. Circulating Fluid Bed p. 459
 - A. CFB Hydrodynamics p. 460
- IV. Thermal Desorption p. 461
 - A. Soil Parameters p. 461
 - B. Thermal Desorption Systems p. 464
 - C. Operating Parameters p. 466
 - D. Remediation Performance p. 468
- V. Plasma Technology p. 468
- 12. Other Incineration Systems for Solid Wastes p. 471
 - I. Multiple Chamber (Hearth or Fixed Grate) p. 471
 - II. Multiple Chamber (Moving Grate) p. 474
 - III. Modular Starved Air p. 474
 - IV. Open Pit Type p. 475
 - V. Conical (Tepee) Type p. 478
 - VI. Gasification Processes for MSW p. 479
 - A. General p. 481
 - B. Gasification of an RDF by Partial Combustion p. 482
 - C. Gasification of an RDF by Pyrolysis and Steam Reforming (Battelle) p. 488
 - D. Gasification of Raw MSW by Pyrolysis p. 492
- 13. Air Pollution Aspects of Incineration Processes p. 501
 - I. Air Pollutants from Combustion Processes p. 501
 - A. Particulate Matter p. 503
 - B. Combustible Solids, Liquids, and Gases p. 517
 - C. Gaseous Pollutants Related to Fuel Chemistry p. 520
 - D. Nitrogen Oxides p. 523
 - II. Air Toxics p. 529
 - A. Metal Emission Rates p. 531
 - B. Emissions of Organic Compounds p. 544
- 14. Air Pollution Control for Incineration Systems p. 553
 - I. Equipment Options for Incinerator Air Pollution Control p. 555
 - A. Settling Chambers p. 555
 - B. Cyclones and Inertial Collectors p. 555
 - C. Wet Scrubbers p. 558
 - D. Electrostatic Precipitators p. 568
 - E. Fabric Filter (Baghouse) p. 576
 - F. Absorbers p. 583
 - G. Specialized Abatement Technology p. 589
 - II. Control Strategies for Incinerator Air Pollution Control p. 598
 - A. Air Pollution Control through Process Optimization p. 598
 - B. Control Selections for Incinerator Types p. 599
 - C. Continuous-Emission Monitoring p. 603

- D. Air Pollution Control to Achieve Air-Quality Objectives p. 604
- 15. Approaches to Incinerator Selection and Design p. 615
- I. Characterize the Waste p. 615
- II. Lay Out the System in Blocks p. 616
- III. Establish Performance Objectives p. 616
- IV. Develop Heat and Material Balances p. 616
- V. Develop Incinerator Envelope p. 616
- VI. Evaluate Incinerator Dynamics p. 616
- VII. Develop the Designs of Auxiliary Equipment p. 617
- VIII. Develop Incinerator Economics p. 617
- A. General p. 618
- IX. Build and Operate p. 622
- Appendices
- A. Symbols: A Partial List p. 623
- B. Conversion Factors p. 627
- C. Periodic Table of Elements p. 631
- D. Combustion Properties of Coal, Oil, Natural Gas, and Other Materials p. 633
- E. Pyrometric Cone Equivalent p. 645
- F. Spreadsheet Templates for Use in Heat and Material Balance Calculations p. 647
- A. Heat and Material Balance Spreadsheets p. 648
- B. Heat of Combustion Calculator: HCOMB.xls p. 651
- C. Moisture Correction in Refuse Analyses: Moisture.xls p. 651
- D. Equilibrium Constant Estimation: Equil.xls p. 655
- E. Steam.exe Program p. 659
- G. Thermal Stability Indices p. 659
- Notes and References p. 677
- Index p. 701
