

- Preface p. iii
- Contributors p. xv
- 1 Introduction: An Overview of Classical Sliding Mode Control A.J. Fossard and T. Floquet p. 1
 - 1.1 Introduction and historical account p. 1
 - 1.2 An introductory example p. 4
 - 1.3 Dynamics in the sliding mode p. 7
 - 1.3.1 Linear systems p. 7
 - 1.3.2 Nonlinear systems p. 11
 - 1.3.3 The chattering phenomenon p. 12
 - 1.4 Sliding mode control design p. 14
 - 1.4.1 Reachability condition p. 14
 - 1.4.2 Robustness properties p. 17
 - 1.5 Trajectory and model following p. 21
 - 1.5.1 Trajectory following p. 21
 - 1.5.2 Model following p. 22
 - 1.6 Conclusion p. 24
 - References p. 25
- 2 Differential Inclusions and Sliding Mode Control T. Zolezzi p. 29
 - 2.1 Introduction p. 29
 - 2.2 Discontinuous differential equations and differential inclusions p. 31
 - 2.3 Differential inclusions and Filippov solutions p. 33
 - 2.4 Viability and equivalent control p. 39
 - 2.5 Robustness and discontinuous control p. 44
 - 2.6 Numerical treatment p. 47
 - 2.7 Mathematical appendix p. 48
 - 2.8 Bibliographical comments p. 49
 - References p. 50
- 3 Higher-Order Sliding Modes L. Fridman and A. Levant p. 53
 - 3.1 Introduction p. 53
 - 3.2 Definitions of higher order sliding modes p. 56
 - 3.2.1 Sliding modes on manifolds p. 56
 - 3.2.2 Sliding modes with respect to constraint functions p. 57
 - 3.3 Higher order sliding modes in control systems p. 59
 - 3.3.1 Ideal sliding p. 59
 - 3.3.2 Real sliding and finite time convergence p. 62
 - 3.4 Higher order sliding stability in relay systems p. 64
 - 3.4.1 2-sliding stability in relay systems p. 65
 - 3.4.2 Relay system instability with sliding order more than 2 p. 66
 - 3.5 Sliding order and dynamic actuators p. 66
 - 3.5.1 Stability of 2-sliding modes in systems with fast actuators p. 66
 - 3.5.2 Systems with fast actuators of relative degree 3 and higher p. 69
 - 3.6 2-sliding controllers p. 74
 - 3.6.1 2-sliding dynamics p. 74
 - 3.6.2 Twisting algorithm p. 76
 - 3.6.3 Sub-optimal algorithm p. 78

- 3.6.4 Super-twisting algorithm p. 80
- 3.6.5 Drift algorithm p. 81
- 3.6.6 Algorithm with a prescribed convergence law p. 82
- 3.6.7 Examples p. 84
- 3.7 Arbitrary-order sliding controllers p. 84
 - 3.7.1 The problem statement p. 87
 - 3.7.2 Controller construction p. 87
 - 3.7.3 Examples p. 92
- 3.8 Conclusions p. 96
- References p. 96
- 4 Sliding Mode Observers J-P. Barbot and M. Djemai and T. Boukhobza p. 103
 - 4.1 Introduction p. 103
 - 4.2 Preliminary example p. 105
 - 4.3 Output and output derivative injection form p. 106
 - 4.3.1 Nonlinear observer p. 106
 - 4.3.2 Sliding observer for output and output derivative nonlinear injection form p. 108
 - 4.4 Triangular input observer form p. 113
 - 4.4.1 Sliding mode observer design for triangular input observer form p. 114
 - 4.4.2 Observer matching condition p. 118
 - 4.5 Simulations and comments p. 119
 - 4.6 Conclusion p. 123
 - 4.7 Appendix p. 123
 - 4.7.1 Proof of Proposition 39 p. 123
 - 4.7.2 Proof of Theorem 41 p. 124
 - 4.7.3 Proof of Theorem 49 p. 125
 - References p. 126
- 5 Dynamic Sliding Mode Control and Output Feedback C. Edwards and S.K. Spurgeon p. 131
 - 5.1 Introduction p. 131
 - 5.2 Static output feedback of uncertain systems p. 133
 - 5.3 Output feedback sliding mode control for uncertain systems via dynamic compensation p. 140
 - 5.3.1 Dynamic compensation (observer based) p. 143
 - 5.3.2 Control law construction p. 145
 - 5.3.3 Design example p. 148
 - 5.4 Dynamic sliding mode control for nonlinear systems p. 150
 - 5.4.1 Design example p. 157
 - 5.5 Conclusions p. 160
 - References p. 161
- 6 Sliding Modes, Passivity, and Flatness H. Sira-Ramirez p. 163
 - 6.1 Introduction p. 163
 - 6.2 The permanent magnet stepper motor p. 164
 - 6.2.1 The simpler D-Q nonlinear model of the PM stepper motor p. 165
 - 6.2.2 The control problem p. 166
 - 6.2.3 A passivity canonical model of the PM stepper motor p. 166
 - 6.2.4 A controller based on "energy shaping plus damping injection" p. 167

- 6.2.5 Differential flatness of the system p. 169
- 6.2.6 A dynamic passivity plus flatness based controller p. 169
- 6.2.7 Simulation results p. 170
- 6.2.8 A pulse width modulation implementation p. 173
- 6.3 The "boost" DC-to-DC power converter p. 175
- 6.3.1 Flatness of the "boost" converter p. 176
- 6.3.2 Passivity properties through flatness p. 177
- 6.3.3 A passivity-based sliding mode controller p. 178
- 6.3.4 Non-minimum phase output stabilization p. 181
- 6.3.5 Trajectory planning p. 181
- 6.3.6 Simulation results p. 182
- 6.3.7 Dc-to-ac power conversion p. 183
- 6.3.8 An iterative procedure for generating a suitable inductor current reference p. 184
- 6.3.9 Simulation results p. 186
- 6.4 Conclusions p. 188
- References p. 188
- 7 Stability and Stabilization W. Perruquetti p. 191
- 7.1 Introduction p. 191
- 7.2 Notation p. 193
- 7.3 Generalized regular form p. 194
- 7.3.1 Obtention of the regular form p. 194
- 7.3.2 Effect of perturbations on the regular form p. 197
- 7.4 Estimation of initial sliding domain p. 199
- 7.4.1 Problem formulation p. 199
- 7.4.2 Sliding domain and initial domain of sliding motion p. 200
- 7.4.3 Application p. 202
- 7.5 Stabilization p. 205
- 7.5.1 Stabilization in the case $d = m$ p. 205
- 7.5.2 Stabilization in the case $d \neq m$ p. 208
- 7.6 Conclusion p. 211
- References p. 212
- 8 Discretization Issues J-P. Barbot and T. Boukhobza p. 217
- 8.1 Introduction p. 217
- 8.2 Mathematical recalls p. 218
- 8.3 Classical sliding modes in discrete time p. 221
- 8.4 Second-order sliding mode under sampling p. 225
- 8.5 The sampled "twisting algorithm" p. 229
- References p. 230
- 9 Adaptive and Sliding Mode Control G. Bartolini p. 233
- 9.1 Introduction p. 233
- 9.2 Identification of continuous linear systems in I/O form p. 235
- 9.3 MRAC model reference adaptive control p. 238
- 9.3.1 MRAC with accessible states p. 239
- 9.3.2 Adaptive control for SISO plant in I/O form: an introductory example with relative degree equal to one p. 241
- 9.3.3 Generalization to system of relative degree greater than one p. 246

- 9.4 Sliding mode and adaptive control p. 247
- 9.5 Combining sliding mode with adaptive control p. 249
- 9.6 Conclusions p. 259
- References p. 260
- 10 Steady Modes in Relay Systems with Delay L. Fridman and E. Fridman and E. Shustin p. 263
- 10.1 Introduction p. 263
- 10.2 Steady modes and stability p. 266
- 10.2.1 Steady modes p. 266
- 10.2.2 Stability p. 268
- 10.3 Singular perturbation in relay systems with time delay p. 269
- 10.3.1 Existence of stable zero frequency periodic steady modes for a singularly perturbed multidimensional system p. 269
- 10.3.2 Existence of stable zero frequency steady modes in systems of arbitrary order p. 271
- 10.4 Design of delay controllers of relay type p. 272
- 10.4.1 Stabilization of the simplest unstable system p. 272
- 10.4.2 Stable systems with bounded perturbation and relay controllers with delay p. 273
- 10.4.3 Statement of the adaptive control problem p. 274
- 10.4.4 The case of definite systems p. 275
- 10.4.5 The case of indefinite systems p. 276
- 10.5 Generalizations and open problems p. 276
- 10.5.1 The case when $|F(x)| \leq 1$ for some x p. 276
- 10.5.2 Systems and steady modes of the second order p. 276
- 10.5.3 Stability and instability of steady modes for multidimensional case p. 277
- 10.6 Conclusions p. 278
- 10.7 Appendix: proofs p. 278
- References p. 290
- 11 Sliding Mode Control for Systems with Time Delay F. Gouaisbaut and W. Perruquetti and J.-P. Richard p. 295
- 11.1 Introduction p. 295
- 11.2 SMC under delay effect: a case study p. 298
- 11.2.1 Problem formulation p. 298
- 11.2.2 A case study p. 299
- 11.2.3 An example with simulation p. 302
- 11.3 A SMC design for linear time delay systems p. 306
- 11.3.1 Regular form p. 306
- 11.3.2 Asymptotic stability of systems with small delays p. 307
- 11.3.3 Sliding mode controller synthesis p. 308
- 11.3.4 Example: delay in the state p. 315
- 11.4 Conclusion p. 317
- References p. 319
- 12 Sliding Mode Control of Infinite-Dimensional Systems Y. Orlov p. 325
- 12.1 Introduction p. 325
- 12.2 Motivation: disturbance rejection in Hilbert space p. 329
- 12.3 Mathematical description of sliding modes in Hilbert space p. 331

- 12.3.1 Semilinear differential equation p. 331
- 12.3.2 Discontinuous control input and sliding mode equation p. 332
- 12.4 Unit control synthesis for uncertain systems with a finite-dimensional unstable part p. 335
- 12.4.1 Disturbance rejection in exponentially stabilizable systems p. 336
- 12.4.2 Disturbance rejection in minimum phase systems p. 340
- 12.5 Conclusions p. 346
- References p. 346
- 13 Application of Sliding Mode Control to Robotic Systems N. M'Sirdi and N. Nadjar-Gauthier p. 351
- 13.1 Introduction p. 351
- 13.2 Modeling and properties of robotic systems p. 353
- 13.2.1 Dynamics of mechanical systems p. 353
- 13.2.2 Control design approach p. 354
- 13.2.3 Examples p. 358
- 13.3 Sliding mode for robot control p. 365
- 13.3.1 Sliding mode control for a pneumatic system p. 366
- 13.3.2 Sliding mode control of a hydraulic robot p. 369
- 13.3.3 Simulation results p. 370
- 13.4 SM observers based control p. 372
- 13.4.1 Observer design p. 373
- 13.4.2 Tracking error equation: observer and control p. 376
- 13.4.3 Stability of observer based control p. 376
- 13.4.4 Simulation results p. 379
- 13.4.5 Conclusion p. 380
- 13.5 Appendix p. 381
- 13.5.1 Pneumatic actuators model p. 381
- 13.5.2 Hydraulic manipulator model p. 383
- 13.5.3 Proof of lemma p. 385
- References p. 386
- 14 Sliding Modes Control of the Induction Motor: a Benchmark Experimental Test A. Glumineau and L. C. De Souza Marques and R. Boisliveau p. 391
- 14.1 Introduction p. 391
- 14.2 Sliding modes control p. 392
- 14.3 Application to the induction motor p. 396
- 14.4 Benchmark "horizontal handling" p. 398
- 14.4.1 Speed and flux references and load disturbance p. 399
- 14.4.2 Induction motor parameters (squirrel cage rotor) p. 399
- 14.4.3 Variations of the parameters for robustness test p. 400
- 14.5 Simulation and experimentation results p. 400
- 14.5.1 Results of simulations p. 400
- 14.5.2 Experimental results p. 403
- 14.6 Conclusion p. 404
- References p. 405
