

- Preface p. v
- Symbols p. xvii
- Chapter 1 Classification and Selection of Bearings p. 1
 - 1.1 Introduction p. 1
 - 1.2 Dry and Boundary Lubrication Bearings p. 5
 - 1.3 Hydrodynamic Bearing p. 6
 - 1.4 Hydrostatic Bearing p. 9
 - 1.5 Magnetic Bearing p. 12
 - 1.6 Rolling Element Bearings p. 14
 - 1.7 Selection Criteria p. 17
 - 1.8 Bearings for Precision Applications p. 19
 - 1.9 Noncontact Bearings for Precision Application p. 20
 - 1.10 Bearing Subjected to Frequent Starts and Stops p. 21
 - 1.11 Example Problems p. 22
- Chapter 2 Lubricant Viscosity p. 33
 - 2.1 Introduction p. 33
 - 2.2 Simple Shear Flow p. 34
 - 2.3 Boundary Conditions of Flow p. 36
 - 2.4 Viscosity Units p. 37
 - 2.5 Viscosity--Temperature Curves p. 38
 - 2.6 Viscosity Index p. 40
 - 2.7 Viscosity as a Function of Pressure p. 41
 - 2.8 Viscosity as a Function of Shear Rate p. 43
 - 2.9 Viscoelastic Lubricants p. 43
- Chapter 3 Fundamental Properties of Lubricants p. 47
 - 3.1 Introduction p. 47
 - 3.2 Crude Oils p. 48
 - 3.3 Base Oil Components p. 49
 - 3.4 Synthetic Oils p. 50
 - 3.5 Greases p. 56
 - 3.6 Additives to Lubricants p. 58
- Chapter 4 Principles of Hydrodynamic Lubrication p. 67
 - 4.1 Introduction p. 67
 - 4.2 Assumptions of Hydrodynamic Lubrication Theory p. 69
 - 4.3 Hydrodynamic Long Bearing p. 72
 - 4.4 Differential Equation of Fluid Motion p. 72
 - 4.5 Flow in a Long Bearing p. 74
 - 4.6 Pressure Wave p. 79
 - 4.7 Plane-Slider Load Capacity p. 81
 - 4.8 Viscous Friction Force in a Plane-Slider p. 81
 - 4.9 Flow Between Two Parallel Plates p. 82
 - 4.10 Fluid-Film Between a Cylinder and Flat Plate p. 84
 - 4.11 Solution in Dimensionless Terms p. 86
- Chapter 5 Basic Hydrodynamic Equations p. 94

- 5.1 Navier--Stokes Equations p. 94
- 5.2 Reynolds Hydrodynamic Lubrication Equation p. 97
- 5.3 Wide Plane-Slider p. 103
- 5.4 Fluid Film Between a Flat Plate and a Cylinder p. 104
- 5.5 Transition to Turbulence p. 105
- 5.6 Cylindrical Coordinates p. 110
- 5.7 Squeeze-Film Flow p. 111
- Chapter 6 Long Hydrodynamic Journal Bearing p. 118
- 6.1 Introduction p. 118
- 6.2 Reynolds Equation for a Journal Bearing p. 120
- 6.3 Journal Bearing with Rotating Sleeve p. 121
- 6.4 Combined Rolling and Sliding p. 122
- 6.5 Pressure Wave in a Long Journal Bearing p. 125
- 6.6 Sommerfeld Solution of the Pressure Wave p. 127
- 6.7 Journal Bearing Load Capacity p. 129
- 6.8 Load Capacity Based on Sommerfeld Conditions p. 131
- 6.9 Friction in a Long Journal Bearing p. 132
- 6.10 Power Loss on Viscous Friction p. 134
- 6.11 Sommerfeld Number p. 134
- 6.12 Practical Pressure Boundary Conditions p. 135
- Chapter 7 Short Journal Bearings p. 147
- 7.1 Introduction p. 147
- 7.2 Short-Bearing Analysis p. 149
- 7.3 Flow in the Axial Direction p. 153
- 7.4 Sommerfeld Number of a Short Bearing p. 153
- 7.5 Viscous Friction p. 154
- 7.6 Journal Bearing Stiffness p. 155
- Chapter 8 Design Charts for Finite-Length Journal Bearings p. 161
- 8.1 Introduction p. 161
- 8.2 Design Procedure p. 162
- 8.3 Minimum Film Thickness p. 163
- 8.4 Raimondi and Boyd Charts and Tables p. 164
- 8.5 Fluid Film Temperature p. 181
- 8.6 Peak Temperature in Large, Heavily Loaded Bearings p. 188
- 8.7 Design Based on Experimental Curves p. 190
- Chapter 9 Practical Applications of Journal Bearings p. 196
- 9.1 Introduction p. 196
- 9.2 Hydrodynamic Bearing Whirl p. 197
- 9.3 Elliptical Bearings p. 198
- 9.4 Three-Lobe Bearings p. 199
- 9.5 Pivoted-Pad Journal Bearing p. 200
- 9.6 Bearings Made of Compliant Materials p. 202
- 9.7 Foil Bearings p. 203
- 9.8 Analysis of a Foil Bearing p. 204

- 9.9 Foil Bearings in High-Speed Turbines p. 207
- 9.10 Design Example of a Compliant Bearing p. 209
- Chapter 10 Hydrostatic Bearings p. 212
- 10.1 Introduction p. 212
- 10.2 Hydrostatic Circular Pads p. 214
- 10.3 Radial Pressure Distribution and Load Capacity p. 214
- 10.4 Power Losses in the Hydrostatic Pad p. 218
- 10.5 Optimization for Minimum Power Loss p. 219
- 10.6 Long Rectangular Hydrostatic Bearings p. 222
- 10.7 Multidirectional Hydrostatic Support p. 223
- 10.8 Hydrostatic Pad Stiffness for Constant Flow-Rate p. 226
- 10.9 Constant-Pressure-Supply Pads with Restrictors p. 233
- 10.10 Analysis of Stiffness for a Constant Pressure Supply p. 235
- 10.11 Journal Bearing Cross-Stiffness p. 243
- 10.12 Applications p. 244
- 10.13 Hydraulic Pumps p. 244
- 10.14 Gear Pump Characteristics p. 248
- 10.15 Flow Dividers p. 252
- 10.16 Case Study: Hydrostatic Shoe Pads in Large Rotary Mills p. 252
- Chapter 11 Bearing Materials p. 267
- 11.1 Fundamental Principles of Tribology p. 267
- 11.2 Wear Mechanisms p. 273
- 11.3 Selection of Bearing Materials p. 275
- 11.4 Metal Bearings p. 279
- 11.5 Nonmetal Bearing Materials p. 283
- Chapter 12 Rolling Element Bearings p. 308
- 12.1 Introduction p. 308
- 12.2 Classification of Rolling-Element Bearings p. 314
- 12.3 Hertz Contact Stresses in Rolling Bearings p. 323
- 12.4 Theoretical Line Contact p. 324
- 12.5 Ellipsoidal Contact Area in Ball Bearings p. 331
- 12.6 Rolling-Element Speed p. 340
- 12.7 Elastohydrodynamic Lubrication in Rolling Bearings p. 342
- 12.8 Elastohydrodynamic Lubrication of a Line Contact p. 345
- 12.9 Elastohydrodynamic Lubrication of Ball Bearings p. 351
- 12.10 Force Components in an Angular Contact Bearing p. 361
- Chapter 13 Selection and Design of Rolling Bearings p. 378
- 13.1 Introduction p. 378
- 13.2 Fatigue Life Calculations p. 390
- 13.3 Bearing Operating Temperature p. 395
- 13.4 Rolling Bearing Lubrication p. 399
- 13.5 Bearing Precision p. 411
- 13.6 Internal Clearance of Rolling Bearings p. 414
- 13.7 Vibrations and Noise in Rolling Bearings p. 416

- 13.8 Shaft and Housing Fits p. 418
- 13.9 Stress and Deformation Due to Tight Fits p. 429
- 13.10 Bearing Mounting Arrangements p. 436
- 13.11 Adjustable Bearing Arrangement p. 440
- 13.12 Examples of Bearing Arrangements in Machinery p. 447
- 13.13 Selection of Oil Versus Grease p. 458
- 13.14 Grease Lubrication p. 460
- 13.15 Grease Life p. 467
- 13.16 Liquid Lubrication Systems p. 471
- 13.17 High-Temperature Applications p. 478
- 13.18 Speed Limit of Standard Bearings p. 479
- 13.19 Materials for Rolling Bearings p. 481
- 13.20 Processes for Manufacturing High-Purity Steel p. 484
- 13.21 Ceramic Materials for Rolling Bearings p. 485
- 13.22 Rolling Bearing Cages p. 490
- 13.23 Bearing Seals p. 490
- 13.24 Mechanical Seals p. 498
- Chapter 14 Testing of Friction and Wear p. 502
- 14.1 Introduction p. 502
- 14.2 Testing Machines for Dry and Boundary Lubrication p. 503
- 14.3 Friction Testing Under High-Frequency Oscillations p. 505
- 14.4 Measurement of Journal Bearing Friction p. 509
- 14.5 Testing of Dynamic Friction p. 511
- 14.6 Friction-Testing Machine with a Hydrostatic Pad p. 512
- 14.7 Four-Bearings Measurement Apparatus p. 514
- 14.8 Apparatus for Measuring Friction in Linear Motion p. 517
- Chapter 15 Hydrodynamic Bearings Under Dynamic Conditions p. 521
- 15.1 Introduction p. 521
- 15.2 Analysis of Short Bearings Under Dynamic Conditions p. 522
- 15.3 Journal Center Trajectory p. 526
- 15.4 Solution of Journal Motion by Finite-Difference Method p. 526
- Chapter 16 Friction Characteristics p. 531
- 16.1 Introduction p. 531
- 16.2 Friction in Hydrodynamic and Mixed Lubrication p. 532
- 16.3 Friction of Plastic Against Metal p. 537
- 16.4 Dynamic Friction p. 537
- Chapter 17 Modeling Dynamic Friction p. 540
- 17.1 Introduction p. 540
- 17.2 Dynamic Friction Model for Journal Bearings p. 542
- 17.3 Development of the Model p. 543
- 17.4 Modeling Friction at Steady Velocity p. 546
- 17.5 Modeling Dynamic Friction p. 548
- 17.6 Comparison of Model Simulations and Experiments p. 550
- Chapter 18 Case Study: Composite Bearing--Rolling Element and Fluid Film in Series p. 556

- 18.1 Introduction p. 556
- 18.2 Composite-Bearing Designs p. 558
- 18.3 Previous Research in Composite Bearings p. 563
- 18.4 Composite Bearing with Centrifugal Mechanism p. 564
- 18.5 Performance Under Dynamic Conditions p. 568
- 18.6 Thermal Effects p. 576
- Chapter 19 Non-Newtonian Viscoelastic Effects p. 582
- 19.1 Introduction p. 582
- 19.2 Viscoelastic Fluid Models p. 584
- 19.3 Analysis of Viscoelastic Fluid Flow p. 586
- 19.4 Pressure Wave in a Journal Bearing p. 590
- 19.5 Squeeze-Film Flow p. 592
- Chapter 20 Orthopedic Joint Implants p. 596
- 20.1 Introduction p. 596
- 20.2 Artificial Hip Joint as a Bearing p. 598
- 20.3 History of the Hip Replacement Joint p. 599
- 20.4 Materials for Joint Implants p. 601
- 20.5 Dynamic Friction p. 602
- Appendix A Units and Definitions of Material Properties p. 605
- Appendix B Numerical Integration p. 609
- Bibliography p. 615
- Index p. 625
