

- Preface p. v
- Contributors p. xvii
- 1 Anti-windup for Exponentially Unstable Linear Systems with Rate and Magnitude Input Limits C. Barbu and R. Reginatto and A.R. Teel and L. Zaccarian p. 1
  - 1.1. Introduction p. 1
  - 1.2. The Anti-windup Construction p. 4
    - 1.2.1. Problem Statement p. 4
    - 1.2.2. The Anti-windup Compensator p. 6
    - 1.2.3. Main Result p. 8
  - 1.3. Anti-windup Design for an Unstable Aircraft p. 14
    - 1.3.1. Aircraft Model and Design Goals p. 14
    - 1.3.2. Selection of the Operating Region p. 16
    - 1.3.3. The Nominal Controller p. 18
  - 1.4. Simulations p. 21
  - 1.5. Conclusions p. 22
  - 1.6. Proof of the Main Result p. 24
  - References p. 28
- 2 Selecting the Level of Actuator Saturation for Small Performance Degradation of Linear Designs Y. Eun and C. Gokcek and P.T. Kabamba and S.M. Meerkov p. 33
  - 2.1. Introduction p. 33
  - 2.2. Problem Formulation p. 35
  - 2.3. Main Result p. 37
  - 2.4. Examples p. 38
  - 2.5. Conclusions p. 41
  - 2.6. Appendix p. 41
  - References p. 44
- 3 Null Controllability and Stabilization of Linear Systems Subject to Asymmetric Actuator Saturation T. Hu and A. N. Pitsillides and Z. Lin p. 47
  - 3.1. Introduction p. 47
  - 3.2. Preliminaries and Notation p. 49
  - 3.3. Null Controllable Regions p. 51
    - 3.3.1. General Description of Null Controllable Regions p. 51
    - 3.3.2. Systems with Only Real Eigenvalues p. 54
    - 3.3.3. Systems with Complex Eigenvalues p. 56
  - 3.4. Domain of Attraction under Saturated Linear State Feedback p. 58
  - 3.5. Semiglobal Stabilization on the Null Controllable Region p. 67
    - 3.5.1. Second Order Anti-stable Systems p. 67
    - 3.5.2. Higher Order Systems with Two Exponentially Unstable Poles p. 74
  - 3.6. Conclusions p. 75
  - References p. 75
- 4 Regional  $H_2$  Performance Synthesis T. Iwasaki and M. Fu p. 77
  - 4.1. Introduction p. 77
  - 4.2. Analysis p. 78
    - 4.2.1. A General Framework p. 78
    - 4.2.2. Applications--Linear and Circle Analyses p. 80
  - 4.3. Synthesis p. 83

- 4.3.1. Problem Formulation and a Critical Observation p. 83
- 4.3.2. Proof of Theorem 4.1 p. 86
- 4.3.3. Fixed-gain Control p. 87
- 4.3.4. Switching Control p. 92
- 4.4. Design Examples p. 95
- 4.4.1. Switching Control with Linear Analysis p. 95
- 4.4.2. Switching Control with Circle Analysis p. 96
- 4.4.3. Fixed Gain Control with Accelerated Convergence p. 100
- 4.5. Further Discussion p. 102
- References p. 105
- 5 Disturbance Attenuation with Bounded Actuators: An LPV Approach F. Jobbari p. 109
- 5.1. Introduction p. 109
- 5.2. Preliminaries p. 111
- 5.3. Parameter-independent Lyapunov Functions p. 113
- 5.4. Parameter-dependent Compensators and Lyapunov Functions p. 117
- 5.5. Numerical Example p. 118
- 5.6. Rate Bounds p. 119
- 5.7. Scheduled Controllers: State Feedback Case p. 122
- 5.7.1. Obtaining the Controller p. 126
- 5.7.2. Special case: Constant Q p. 128
- 5.7.3. A Simple Example p. 129
- 5.8. Conclusion p. 131
- References p. 131
- 6 LMI-Based Control of Discrete-Time Systems with Actuator Amplitude and Rate Nonlinearities H. Pan and V. Kapila p. 135
- 6.1. Introduction p. 135
- 6.2. State Feedback Control of Discrete-Time Systems with Actuator Amplitude and Rate Nonlinearities p. 137
- 6.3. State Feedback Controller Synthesis for Discrete-Time Systems with Actuator Amplitude and Rate Nonlinearities p. 141
- 6.4. Dynamic Output Feedback Control of Discrete-Time Systems with Actuator Amplitude and Rate Nonlinearities p. 146
- 6.5. Dynamic Output Feedback Controller Synthesis for Discrete-Time Systems with Actuator Amplitude and Rate Nonlinearities p. 148
- 6.6. Illustrative Numerical Examples p. 154
- 6.7. Conclusion p. 157
- References p. 159
- 7 Robust Control Design for Systems with Saturating Nonlinearities T. Pare and H. Hindi and J. How p. 163
- 7.1. Introduction p. 163
- 7.2. Problems of Local Control Design p. 167
- 7.3. The Design Approach p. 170
- 7.4. System Model p. 171
- 7.5. Design Algorithms p. 173
- 7.5.1. Stability Region (SR) p. 174
- 7.5.2. Disturbance Rejection (DR) p. 175

- 7.5.3. Local  $L_2$ -Gain (EG) p. 177
- 7.5.4. Controller Reconstruction p. 178
- 7.5.5. Optimization Algorithms p. 179
- 7.6.  $L_2$ -Gain Control Example p. 179
- 7.7. Conclusions p. 181
- 7.8. Appendix p. 182
- 7.8.1. Preliminaries p. 182
- 7.8.2. Region of Convergence Design p. 183
- 7.8.3. Local Disturbance Rejection Design p. 184
- 7.8.4. Local  $L_2$ -Gain Design p. 184
- References p. 184
- 8 Output Regulation of Linear Plants Subject to State and Input Constraints A. Saberi and A.A. Stoorvogel and G. Shi and P. Sannuti p. 189
- 8.1. Introduction p. 190
- 8.2. System Model and Primary Assumptions p. 191
- 8.3. A Model for Actuator Constraints p. 194
- 8.4. Statements of Problems p. 197
- 8.5. Taxonomy of Constraints p. 200
- 8.6. Low-gain and Low-high Gain Design for Linear Systems with Actuators Subject to Both Amplitude and Rate Constraints p. 202
- 8.6.1. Static Low-gain State Feedback p. 203
- 8.6.2. A New Version of Low-gain Design p. 205
- 8.6.3. A New Low-high Gain Design p. 207
- 8.6.4. Scheduled Low-gain Design p. 208
- 8.7. Main Results for Right-invertible Constraints p. 209
- 8.7.1. Results p. 210
- 8.7.2. Proofs of Theorems p. 212
- 8.8. Output Regulation with Non-right-invertible Constraints p. 219
- 8.9. Tracking Problem with Non-minimum Phase Constraints p. 221
- 8.10. Conclusions p. 223
- References p. 224
- 9 Optimal Windup and Directionality Compensation in Input-Constrained Nonlinear Systems M. Soroush and P. Daoutidis p. 227
- 9.1. Introduction p. 227
- 9.2. Directionality and Windup p. 228
- 9.2.1. Directionality p. 228
- 9.2.2. Windup p. 230
- 9.2.3. Organization of this Chapter p. 231
- 9.3. Optimal Directionality Compensation p. 231
- 9.3.1. Scope p. 231
- 9.3.2. Directionality p. 232
- 9.3.3. Optimal Directionality Compensation p. 232
- 9.3.4. Application to Two Plants p. 236
- 9.4. Windup Compensation p. 240
- 9.4.1. Scope p. 240
- 9.5. Nonlinear Controller Design p. 240

- 9.5.1. Application to a Nonlinear Chemical Reactor p. 242
- References p. 244
- 10 Output Feedback Compensators for Linear Systems with Position and Rate Bounded Actuators S. Tarbouriech and G. Garcia p. 247
- 10.1. Introduction p. 247
- 10.2. Problem Statement p. 249
- 10.2.1. Nomenclature p. 249
- 10.2.2. Problem Statement p. 249
- 10.3. Mathematical Preliminaries p. 256
- 10.4. Control Strategy via Riccati Equations p. 259
- 10.5. Control Strategy via Matrix Inequalities p. 264
- 10.6. Illustrative Examples p. 267
- 10.7. Concluding Remarks p. 269
- References p. 270
- 11 Actuator Saturation Control via Linear Parameter-Varying Control Methods F. Wu and K.M. Grigoriadis p. 273
- 11.1. Introduction p. 273
- 11.2. LPV System Analysis and Control Synthesis p. 276
- 11.2.1. Induced  $L_2$  Norm Analysis p. 277
- 11.2.2. LPV Controller Synthesis p. 277
- 11.3. LPV Anti-Windup Control Design p. 281
- 11.4. Application to a Flight Control Problem p. 285
- 11.4.1. Single Quadratic Lyapunov Function Case p. 288
- 11.4.2. Parameter-Dependent Lyapunov Function Case p. 291
- 11.5. Conclusions p. 293
- References p. 295
- Index p. 299
