

- Foreword Robert W. Cahn p. iii
- Preface p. v
- Contributors p. ix
- 1. Introduction Xiao-Dong Xiang and Ichiro Takeuchi p. 1
- 2. Multiple-Sample Concept: The Forerunner of Combinatorial Materials Science Joseph J. Hanak p. 7
- 3. The Continuous Composition Spread Approach R. Bruce van Dover and Lynn F. Schneemeyer p. 35
- 4. Combinatorial Approach to Ferroelectric/Dielectric Materials Hauyee Chang and Ichiro Takeuchi p. 69
- 5. Parallel Synthesis of Artificially Designed Lattices and Devices Mikk Lippmaa and Masashi Kawasaki and Hideomi Koinuma p. 91
- 6. Combinatorial Synthesis of Display Phosphors Ted X. Sun p. 141
- 7. Combinatorial Ion Synthesis and Ion Beam Analysis of Materials Libraries Chang-Ming Chen and Xin-Quan Liu and Min-Qian Li p. 177
- 8. Mapping of Physical Properties: Composition Phase Diagrams of Complex Materials Systems Using Continuous Composition Materials Chips Young K. Yoo and Xiao-Dong Xiang p. 213
- 9. Temperature-Dependent Materials Research with Micromachined Array Platforms Steve Semancik p. 263
- 10 X-Ray Techniques for Characterization of Combinatorial Materials Libraries William Chang p. 297
- 11 High-Throughput Screening of Electrical Impedance of Functional Materials by Evanescent Microwave Probe Gang Wang and Xiao-Dong Xiang p. 329
- 12 Combinatorial Computational Chemistry Approach in the Design of New Catalysts and Functional Materials Rodion V. Belosludov and Seiichi Takami and Momoji Kubo and Akira Miyamoto p. 363
- 13 Computational Informatics: Guided Discovery for Combinatorial Experiments Krishna Rajan p. 435
- Index p. 459
