

- Preface p. v
- Section I Fundamentals of Heat Transfer
- 1 Fundamentals of Heat Transfer p. 1
- 1.1 Conduction p. 1
- 1.2 Convection p. 4
- 1.3 Radiation p. 6
- 1.4 Combined Convection and Radiation p. 9
- Section II Conduction
- 2 The General Heat Conduction Equation p. 13
- 2.1 Introduction p. 13
- 2.2 Governing Differential Equation of Heat Conduction p. 13
- 2.3 Laplace Equation p. 15
- 2.4 Poisson's Equation p. 15
- 2.5 Fourier's Equation p. 15
- 2.6 Initial and Boundary Conditions p. 16
- 2.7 First Kind (Dirichlet) Boundary Conditions p. 17
- 2.8 Second Kind (Neumann) Boundary Conditions p. 17
- 2.9 Third Kind (Robin or Mixed) Boundary Conditions p. 18
- 2.10 Temperature-Dependent Thermal Conductivity p. 19
- 2.11 Dimensionless Heat Conduction Numbers p. 21
- 3 One-Dimensional Steady-State Heat Conduction p. 27
- 3.1 The Slab (One-Dimensional Cartesian Coordinates) p. 27
- 3.2 The Cylinder (One-Dimensional Cylindrical Coordinates) p. 28
- 3.3 The Sphere (One-Dimensional Spherical Coordinates) p. 29
- 3.4 Thermal Resistance p. 30
- 3.5 Conduction Through a Slab from One Fluid to Another Fluid p. 32
- 3.6 Composite Medium p. 33
- 3.7 Thermal Contact Resistance p. 35
- 3.8 Standard Method of Determining the Thermal Conductivity in a Solid p. 36
- 3.9 Temperature-Dependent Thermal Conductivity p. 37
- 3.10 Critical Radius of Insulation p. 43
- 3.11 Effects of Radiation p. 44
- 3.12 One-Dimensional Extended Surfaces p. 45
- 4 Two-Dimensional Steady and One-Dimensional Unsteady Heat Conduction p. 61
- 4.1 Method of Separation of Variables p. 61
- 4.2 Steady-State Heat Conduction in a Rectangular Region p. 64
- 4.3 Heat Flow p. 67
- 4.4 Separation into Simpler Problems p. 70
- 4.5 Summary of Steps Used in the Method of Separation of Variables p. 71
- 4.6 Steady-State Heat Conduction in a Two-Dimensional Fin p. 72
- 4.7 Transient Heat Conduction in a Slab p. 76
- 5 Numerical Analysis in Conduction p. 83
- 5.1 Introduction p. 83
- 5.2 Finite Difference of Derivatives p. 83

- 5.3 Finite Difference Equations for 2-D Rectangular Steady-State Conduction p. 86
- 5.4 Finite Difference Representation of Boundary Conditions p. 88
- 5.5 Solution of Finite Difference Equations p. 92
- 5.6 Finite Difference Equations for 1-D Unsteady-State Conduction in Rectangular Coordinates p. 101
- 5.7 Finite Difference of 2-D Unsteady-State Problems in Rectangular Coordinates p. 109
- 5.8 Finite Difference Method Applied in Cylindrical Coordinates p. 113
- 5.9 Truncation Errors and Round-Off Errors in Finite Difference Method p. 115
- 5.10 Stability and Convergence p. 117
- Section III Convection
- 6 Equations for Convection p. 125
- 6.1 Continuity p. 125
- 6.2 Momentum Equations p. 126
- 6.3 Energy Equation p. 131
- 6.4 Summary of Governing Equations p. 137
- 6.5 Dimensionless Numbers p. 140
- 6.6 The Boundary Layer Equations p. 143
- 7 External Forced Convection p. 149
- 7.1 Momentum Integral Method of Analysis p. 149
- 7.2 Integral Method of Analysis for Energy Equation p. 154
- 7.3 Hydrodynamic and Thermal Boundary Layers on a Flat Plate, Where Heating Starts at $x = x_0$ p. 157
- 7.4 Similarity Solution p. 179
- 8 Internal Forced Convection p. 191
- 8.1 Couette Flow p. 191
- 8.2 Heat Transfer and Velocity Distribution in Hydrodynamically and Thermally Developed Laminar Flow in Conduits p. 197
- 8.3 The Circular Tube Thermal-Entry-Length, with Hydrodynamically Fully Developed Laminar Flow p. 205
- 8.4 The Rectangular Duct Thermal-Entry Length, with Hydrodynamically Fully Developed Laminar Flow p. 211
- 9 Natural Convection p. 221
- 9.1 Boundary Layer Concept for Free Convection p. 221
- 9.2 Similarity Solution: Boundary Layer with Uniform Temperature p. 225
- 9.3 Similarity Solution: Boundary Layer with Uniform Heat Flux p. 230
- 9.4 Integral Method of Solution p. 234
- 10 Numerical Analysis in Convection p. 243
- 10.1 Introduction p. 243
- 10.2 Burgers Equation p. 244
- 10.3 Convection Equations p. 245
- 10.4 Numerical Algorithms p. 247
- 10.5 Boundary Layer Equations p. 253
- 10.6 Convection with Incompressible Flow p. 259
- 10.7 Two-Dimensional Convection with Incompressible Flow p. 261

- 10.8 Convection in a Two-Dimensional Porous Medium p. 262
- Section IV Radiation
- 11 Basic Relations of Radiation p. 275
- 11.1 Thermal Radiation p. 275
- 11.2 Radiation Intensity and Blackbody p. 276
- 11.3 Reflectivity, Absorptivity, Emissivity and Transmissivity p. 281
- 11.4 Kirchhoff's Law of Radiation p. 284
- 12 Radiative Exchange in a Non-Participating Medium p. 287
- 12.1 Radiative Exchange Between Two Differential Area Elements p. 287
- 12.2 Concept of View Factor p. 291
- 12.3 Properties of Diffuse View Factors p. 293
- 12.4 Determination of Diffuse View Factor by Contour Integration p. 295
- 12.5 Relations Between View Factors p. 304
- 12.6 Diffuse View Factor Between an Elemental Surface and an Infinitely Long Strip p. 307
- 12.7 Diffuse View Factor Algebra p. 308
- 13 Radiation Exchange in Long Enclosures p. 319
- 13.1 Diffuse View Factor in Long Enclosures p. 319
- 14 Radiation with Other Modes of Heat Transfer p. 357
- 14.1 Introduction p. 357
- 14.2 Radiation with Conduction p. 357
- 14.3 Radiation with Convection p. 368
- 14.4 Radiation with Conduction and Convection p. 377
- Appendix A Bessel Functions p. 389
- Appendix B Physical Constants and Thermophysical Properties p. 397
- Index p. 401
