

- Series Introduction p. iii
- Preface p. iv
- 1 Power Delivery Systems p. 1
  - 1.1 Introduction p. 1
  - 1.2 T&D System's Mission p. 2
  - 1.3 Reliability of Power Delivery p. 3
  - 1.4 The "Natural Laws of T&D" p. 6
  - 1.5 Levels of the T&D System p. 8
  - 1.6 Utility Distribution Equipment p. 16
  - 1.7 T&D Costs p. 21
  - 1.8 Types of Distribution System Design p. 29
  - 1.9 The Systems Approach and Two-Q Planning p. 35
  - 1.10 Summary of Key Points p. 41
  - References and Bibliography p. 45
- 2 Consumer Demand and Electric Load p. 47
  - 2.1 The Two Qs: Quantity and Quality of Power p. 47
  - 2.2 Quantity of Power Demand: Electric Load p. 49
  - 2.3 Electric Consumer Demand for Quality of Power p. 59
  - 2.4 The Market Comb and Consumer Values p. 75
  - 2.5 Two-Q Analysis: Quantity and Quality Versus Cost p. 78
  - 2.6 Conclusion and Summary p. 82
  - References p. 84
- 3 Electric Load, Coincidence, and Behavior p. 85
  - 3.1 Introduction p. 85
  - 3.2 Peak Load, Diversity, and Load Curve Behavior p. 85
  - 3.3 Measuring and Modeling Load Curves p. 94
  - 3.4 Summary p. 102
  - References p. 102
- 4 Power System Reliability p. 103
  - 4.1 Introduction p. 103
  - 4.2 Outages Cause Interruptions p. 107
  - 4.3 Reliability Indices p. 111
  - 4.4 Comparison of Reliability Indices Among Utilities p. 117
  - 4.5 Benchmarking Reliability p. 120
  - 4.6 Conclusion and Summary p. 131
  - References and Further Reading p. 133
- 5 Economics and Evaluation of Cost p. 135
  - 5.1 Introduction p. 135
  - 5.2 Costs p. 136
  - 5.3 Time Value of Money p. 141
  - 5.4 Variability of Costs p. 158
  - 5.5 Conclusion p. 163
  - References p. 165
- 6 Evaluation, Prioritization, and Approval p. 167

- 6.1 Decisions and Commitments p. 167
- 6.2 Evaluation, Comparison, Prioritization, and Approval p. 167
- 6.3 Traditional Regulated Utility Least-Cost Planning p. 178
- 6.4 The Benefit/Cost Ratio Paradigm p. 185
- 6.5 Incremental Benefit/Cost Evaluation p. 195
- 6.6 Profit-Based Planning Paradigms p. 219
- 6.7 Summary, Comments, and Conclusion p. 221
- References and Bibliography p. 230
- 7 Equipment Ratings, Loadings, Lifetime, and Failure p. 231
- 7.1 Introduction p. 231
- 7.2 Capacity Ratings and Lifetime p. 232
- 7.3 Aging, Deterioration, and Damage p. 246
- 7.4 Measures to Improve Equipment Reliability and Life p. 259
- 7.5 Conclusion and Summary p. 263
- For Further Reading p. 266
- 8 Equipment Failures and System Performance p. 267
- 8.1 Introduction p. 267
- 8.2 Equipment Failure Rate Increases with Age p. 267
- 8.3 A Look at Failure and Age in a Utility System p. 274
- 8.4 Conclusion and Summary p. 282
- References p. 282
- 9 Load Reach and Volt-VAR Engineering p. 283
- 9.1 Introduction p. 283
- 9.2 Voltage Behavior on a Distribution System p. 285
- 9.3 Load Reach and Distribution Capability p. 291
- 9.4 Load Reach, the Systems Approach, and Current and Voltage Performance Optimization p. 298
- 9.5 Managing Voltage Drop on Distribution Systems p. 301
- 9.6 Volt-VAR Control and Correction p. 310
- 9.7 Summary of Key Points p. 328
- References p. 330
- 10 Distributed Resources p. 331
- 10.1 Managing Two-Q Demand on the Consumer Side p. 331
- 10.2 Energy and Demand Management Methods p. 332
- 10.3 Conservation Voltage Reduction p. 356
- 10.4 Distributed Generation p. 363
- 10.5 Electric Energy Storage Systems p. 373
- 10.6 Distributed Resource Cost Evaluation p. 378
- 10.7 Summary p. 387
- Bibliography p. 387
- 11 Basic Line Segment and Transformer Sizing Economics p. 389
- 11.1 Introduction p. 389
- 11.2 Distribution Lines p. 389
- 11.3 Transformers p. 399

- 11.4 Basic Equipment Selection Economics p. 407
- 11.5 Conclusion p. 418
- References and Bibliography p. 418
- 12 Choosing the Right Set of Line and Equipment Sizes p. 419
- 12.1 Introduction p. 419
- 12.2 Using Economic Loading and Voltage Drop Well p. 423
- 12.3 Economy and Performance of a Conductor Set p. 428
- 12.4 Conductor Set Design: Fundamental Aspects p. 436
- 12.5 Recommended Method for Conductor Set Design p. 443
- 12.6 Standard Transformer Sets p. 446
- 12.7 Conclusion p. 448
- References and Bibliography p. 448
- 13 Distribution Feeder Layout p. 449
- 13.1 Introduction p. 449
- 13.2 The Feeder System p. 449
- 13.3 Radial and Loop Feeder Layout p. 465
- 13.4 Dual-Voltage Feeders p. 470
- 13.5 Summary of Key Points p. 476
- References p. 476
- 14 Feeder Layout, Switching, and Reliability p. 477
- 14.1 Introduction p. 477
- 14.2 Designing Reliability into the Primary Feeder (MV) Level p. 486
- 14.3 Feeder System Strength p. 494
- 14.4 Contingency-Based Versus Reliability-Based Planning p. 497
- 14.5 Contingency Support and Switching Design p. 505
- 14.6 Protection and Sectionalization of the Feeder System p. 523
- 14.7 Summary of Key Points p. 550
- References and Bibliography p. 550
- 15 Multi-Feeder Layout p. 553
- 15.1 Introduction p. 553
- 15.2 How Many Feeders in a Substation Service Area? p. 554
- 15.3 Planning the Feeder System p. 558
- 15.4 Planning for Load Growth p. 564
- 15.5 Formulae for Estimating Feeder System Cost p. 570
- 15.6 Conclusion and Summary p. 574
- References p. 577
- 16 Distribution Substations p. 579
- 16.1 Introduction p. 579
- 16.2 High-Side Substation Equipment and Layout p. 581
- 16.3 Transformer Portion of a Substation p. 591
- 16.4 Low-Side Portion of a Substation p. 598
- 16.5 The Substation Site p. 602
- 16.6 Substation Costs, Capacity, and Reliability p. 604
- 16.7 Substation Standardization p. 606

- 16.8 Substation Planning and the Concept of "Transformer Units" p. 610
- 16.9 Conclusion and Summary p. 613
- References and Bibliography p. 613
- 17 Distribution System Layout p. 615
- 17.1 Introduction p. 615
- 17.2 The T&D System in Its Entirety p. 615
- 17.3 Design Interrelationships p. 625
- 17.4 Example of a System Dominated by Voltage Drop, Not Capacity p. 651
- 17.5 Conclusion and Summary p. 659
- References and Bibliography p. 659
- 18 Substation Siting and System Expansion Planning p. 661
- 18.1 Introduction p. 661
- 18.2 Substation Location, Capacity, and Service Area p. 661
- 18.3 Substation Siting and Sizing Economics p. 666
- 18.4 Substation-Level Planning: The Art p. 682
- 18.5 Guidelines to Achieve Low Cost in Substation Siting and Sizing p. 685
- 18.6 Substation-Level Planning: The Science p. 689
- 18.7 Planning with Modular Substations p. 698
- 18.8 Summary: The Most Important Point About Substation-Level Planning p. 703
- References and Bibliography p. 703
- 19 Service Level Layout and Planning p. 705
- 19.1 Introduction p. 705
- 19.2 The Service Level p. 705
- 19.3 Types of Service Level Layout p. 706
- 19.4 Load Dynamics, Coincidence, and Their Interaction with the Service Level p. 711
- 19.5 Service-Level Planning and Layout p. 716
- 19.6 High Reliability Service-Level Systems p. 725
- 19.7 Conclusion p. 733
- References p. 733
- 20 Planning Goals and Criteria p. 735
- 20.1 Introduction p. 735
- 20.2 Voltage and Customer Service Criteria and Guidelines p. 737
- 20.3 Other Distribution Design and Operating Guidelines p. 749
- 20.4 Load Ratings and Loading Guidelines p. 751
- 20.5 Equipment and Design Criteria p. 752
- 20.6 Summary of Key Points p. 756
- References and Bibliography p. 756
- 21 Reliability-Related Criteria and Their Use p. 757
- 21.1 Introduction p. 757
- 21.2 Reliability Metrics, Targets, and Criteria p. 761
- 21.3 Practical Issues of Reliability-Based Criteria p. 772
- 21.4 Approaches and Criteria for Targeted Reliability Planning p. 775
- 21.5 Summary of Key Points p. 783
- References and Bibliography p. 783

- 22 Distribution Circuit Electrical Analysis p. 785
- 22.1 Introduction p. 785
- 22.2 Models, Algorithms, and Computer Programs p. 787
- 22.3 Circuit Models p. 790
- 22.4 Models of Electric Load p. 798
- 22.5 Types of Electrical Behavior System Models p. 803
- 22.6 Coincidence and Load Flow Interaction p. 810
- 22.7 Conclusion and Summary p. 817
- References and Bibliography p. 818
- 23 Distribution System Reliability Analysis Methods p. 819
- 23.1 Introduction p. 819
- 23.2 Contingency-Based Planning Methods p. 823
- 23.3 Engineering Reliability Directly p. 844
- 23.4 Analytical Distribution System Reliability Assessment p. 848
- 23.5 Important Aspects of Reliability Assessment p. 851
- 23.6 Reliability Simulation Studies and Financial Risk Assessment p. 857
- 23.7 Conclusion and Key Points p. 863
- References and Bibliography p. 865
- 24 Automated Planning Tools and Methods p. 869
- 24.1 Introduction p. 869
- 24.2 Fast Ways to Find Good Alternatives p. 870
- 24.3 Automated Feeder Planning Methods p. 881
- 24.4 Substation-Level and Strategic Planning Tools p. 892
- 24.5 Application of Planning Tools p. 900
- 24.6 Conclusion and Summary p. 904
- References and Bibliography p. 907
- 25 T&D Load Forecasting Methods p. 909
- 25.1 Spatial Load Forecasting p. 909
- 25.2 Load Growth Behavior p. 911
- 25.3 Important Elements of a Spatial Forecast p. 916
- 25.4 Trending Methods p. 923
- 25.5 Simulation Methods for Spatial Load Forecasting p. 939
- 25.6 Hybrid Trending-Simulation Methods p. 954
- 25.7 Conclusion and Summary of Key Points p. 961
- References and Bibliography p. 963
- 26 Planning and the T&D Planning Process p. 967
- 26.1 Introduction p. 967
- 26.2 Goals, Priorities, and Direction p. 968
- 26.3 Tactical Planning: Finding the Best Alternative p. 978
- 26.4 Short- Versus Long-Range Planning p. 987
- 26.5 Uncertainty and Multi-Scenario Planning p. 992
- 26.6 The Power Delivery Planning Process p. 995
- 26.7 Summary and Key Points p. 1008
- References and Bibliography p. 1015

- 27 Practical Aspects of T&D Load Forecasting p. 1017
- 27.1 The First Step in T&D Planning p. 1017
- 27.2 Weather Normalization and Design Criteria p. 1018
- 27.3 Selection of a Forecast Method p. 1030
- 27.4 Application of Spatial Forecast Methods p. 1039
- 27.5 Conclusion and Summary p. 1052
- Bibliography and References p. 1054
- 28 Balancing Reliability and Spending p. 1055
- 28.1 Introduction p. 1055
- 28.2 The Fundamental Concepts p. 1058
- 28.3 Optimizing Reliability Cost Effectiveness p. 1063
- 28.4 CERI--A Practical Method to "Bootstrap" Reliability Improvement p. 1078
- 28.5 Required Tools and Resources for Reliability Planning p. 1102
- 28.6 "Equitableness" Issues in Reliability Optimization p. 1106
- 28.7 Approaches to Setting and Planning Reliability Targets p. 1113
- 28.8 Asset Management p. 1117
- 28.9 Conclusion and Summary p. 1122
- References and Bibliography p. 1124
- 29 Objectivity, Bias, and Accuracy in Planning p. 1127
- 29.1 Introduction and Purpose of this Chapter p. 1127
- 29.2 Objective Evaluation, Proponent Study, or Simply Poor Work? p. 1129
- 29.3 Ways that Bias Makes Its Way into a T&D Planning Study p. 1132
- 29.4 The "Rules" Used to Bias Planning Studies in an Unseen Manner p. 1135
- 29.5 Areas Where Bias or Mistakes Are Often Introduced into a Study p. 1140
- 29.6 Examples of Bogus, Proponent, and Masked Studies p. 1148
- 29.7 Guidelines for Detecting, Finding, and Evaluating Bias p. 1159
- 29.8 Summary and Conclusion: Forewarned is Forearmed p. 1184
- References p. 1188
- 30 Key Points, Guidelines, Recommendations p. 1189
- 30.1 Introduction p. 1189
- 30.2 On Distribution Systems p. 1189
- 30.3 On Utilities and Utility Practices p. 1193
- 30.4 On Planning Well p. 1199
- References p. 1206
- Index p. 1207
