

- Preface p. iii
- 1. Elementary Vehicles p. 1
- I. Introduction p. 1
- II. Tapered Wheelset on Rails p. 4
- III. The Dynamics of a Shopping Cart p. 10
- A. Inertial Coordinate System p. 12
- B. Body-Fixed Coordinate System p. 18
- 2. Rigid Body Motion p. 21
- I. Introduction p. 21
- II. Inertial Frame Description p. 22
- III. Body-Fixed Coordinate Frame Description p. 24
- A. Basic Dynamic Principles p. 27
- B. General Kinematic Considerations p. 27
- IV. Spin Stabilization of Satellites p. 30
- V. Bond Graphs for Rigid Body Dynamics p. 34
- 3. Stability of Motion--Concepts and Analysis p. 40
- I. Introduction p. 40
- II. Static and Dynamic Stability p. 41
- III. Eigenvalue Calculations and the Routh Criterion p. 45
- A. Mathematical Forms for Vehicle Dynamic Equations p. 47
- B. Computing Eigenvalues p. 52
- C. Routh's Stability Criterion p. 54
- 4. Pneumatic Tire Force Generation p. 59
- I. Introduction p. 59
- II. Tire-Road Interaction p. 59
- III. Lateral Forces p. 61
- A. Effect of Normal Force p. 62
- IV. Longitudinal Forces p. 67
- V. Combined Lateral and Longitudinal Forces p. 69
- 5. Stability of Trailers p. 75
- I. Introduction p. 75
- II. Single Degree-of-Freedom Model p. 76
- A. Use of Lagrange's Equations p. 80
- B. Analysis of the Equation of Motion p. 83
- III. Two Degree-of-Freedom Model p. 85
- A. Calculation of the Slip Angle p. 86
- B. Formulation Using Lagrange's Equations p. 87
- C. Analysis of the Equations of Motion p. 89
- IV. A Third-Order Model p. 91
- A. A Simple Stability Criterion p. 92
- V. A Model Including Rotary Damping p. 93
- A. A Critical Speed p. 95
- 6. Automobiles p. 97
- I. Introduction p. 97
- II. Stability and Dynamics of an Elementary Automobile Model p. 98
- III. Stability Analysis Using Inertial Coordinates p. 99

- A. Stability, Critical Speed, Understeer, and Oversteer p. 105
- B. Body-Fixed Coordinate Formulation p. 106
- IV. Transfer Functions for Front and Rear Wheel Steering p. 109
- V. Yaw Rate and Lateral Acceleration Gains p. 115
- A. The Special Case of the Neutral Steer Vehicle p. 116
- VI. Steady Cornering p. 117
- A. Description of Steady Turns p. 118
- B. Significance of the Understeer Coefficient p. 121
- VII. Acceleration and Yaw Rate Gains p. 124
- VIII. Dynamic Stability in a Steady Turn p. 131
- A. Analysis of the Basic Motion p. 132
- B. Analysis of the Perturbed Motion p. 133
- C. Relating Stability to a Change in Curvature p. 136
- IX. Limit Cornering p. 138
- A. Steady Cornering with Linear Tire Models p. 141
- B. Steady Cornering with Nonlinear Tire Models p. 142
- 7. Two-Wheeled and Tilting Vehicles p. 146
- I. Introduction p. 146
- II. Steering Control of Banking Vehicles p. 147
- A. Development of the Mathematical Model p. 148
- B. Derivation of the Dynamic Equations p. 151
- III. Steering Control of Lean Angle p. 154
- A. Front-Wheel Steering p. 155
- B. Countersteering or Reverse Action p. 157
- C. Rear-Wheel Steering p. 160
- 8. Stability of Casters p. 163
- I. Introduction p. 163
- II. A Vertical Axis Caster p. 164
- III. An Inclined Axis Caster p. 166
- IV. A Vertical Axis Caster with Pivot Flexibility p. 170
- A. Introduction of a Damping Moment p. 172
- V. A Vertical Axis Caster with Pivot Flexibility and a Finite Cornering Coefficient p. 173
- VI. A Caster with Dynamic Side Force Generation p. 174
- I. Introduction p. 181
- A. The Flexible Sidewall Interpretation of Dynamic Force Generation p. 176
- B. Stability Analysis with Dynamic Force Generation p. 179
- 9. Aerodynamics and the Stability of Aircraft p. 181
- II. A Little Airfoil Theory p. 183
- III. Derivation of the Static Longitudinal Stability Criterion for Aircraft p. 189
- A. Parameter Estimation p. 197
- IV. The Phugoid Mode p. 199
- V. Dynamic Stability Considerations--Comparison of Wheels and Wings p. 202
- A. An Elementary Dynamic Stability Analysis of an Airplane p. 206
- VI. The Effect of Elevator Position on Trim Conditions p. 209
- III. Wheel-Rail Interaction p. 219

- 10. Rail Vehicle Dynamics p. 214
- I. Introduction p. 214
- II. Modeling a Wheelset p. 216
- IV. Creepage Equations p. 220
- V. The Equations of Motion p. 223
- VI. The Characteristic Equation p. 223
- VII. Stability Analysis and Critical Speed p. 224
- 11. Electronic Stability Enhancement p. 228
- I. Introduction p. 228
- II. Stability and Control p. 229
- III. From Antilock Braking System to Vehicle Dynamic Control p. 232
- IV. Model Reference Control p. 235
- V. Active Steering Systems p. 238
- A. Stability Augmentation Using Front, Rear, or All-Wheel Steering p. 241
- B. Feedback Model Following Active Steering Control p. 244
- C. Sliding Mode Control p. 246
- D. Active Steering Applied to the "Bicycle" Model of an Automobile p. 250
- E. Active Steering Yaw Rate Controller p. 251
- VI. Limitations of Active Stability Enhancement p. 258
- Appendix Bond Graphs for Vehicle Dynamics p. 260
- Problems p. 270
- Bibliography p. 309
- Index p. 315
