

Table of Contents

- Preface p. v
- 1 Introduction to Polymer Rheology p. 1
- I. Rheology p. 1
- II. Material Functions in Viscometric Flows p. 2
- III. Extensional Flow p. 7
- IV. The Stress Tensor p. 8
- V. The Rate of Strain Tensor p. 11
- References p. 12
- 2 Instruments for Shear Rheology p. 13
- I. Introduction p. 13
- II. Capillary Viscometers p. 14
- III. Coaxial Cylinder Viscometers p. 20
- IV. Cone-and-Plate Viscometers p. 22
- V. Parallel-Plate Viscometers p. 24
- VI. Sliding-Plate Viscometers p. 26
- VII. Other Viscometers p. 28
- References p. 32
- 3 Shear Viscosity of Melts of Flexible Chain Polymers p. 34
- I. Introduction p. 34
- II. Zero-Shear Viscosity p. 37
- III. Shear Rate-Dependent Viscosity p. 51
- IV. Concluding Remarks p. 58
- References p. 59
- 4 Shear Viscosity of Polymer Solutions p. 63
- I. Introduction p. 63
- II. Intrinsic Viscosity--The Limit of Infinite Dilution p. 65
- III. Zero-Shear Viscosity as a Function of Molecular Weight and Concentration p. 68
- IV. Influence of Structural Factors, Temperature, and Pressure on the Zero-Shear Viscosity p. 73
- V. Shear Rate-Dependent Viscosity p. 76
- VI. Viscosity of Polyelectrolytes p. 77
- VII. Surfactant Solutions and Associative Thickeners p. 80
- References p. 86
- 5 Normal Stress Differences in Polymers During Shear Flow p. 89
- I. Introduction p. 89
- II. Low-Shear-Rate Behavior of the First Normal Stress Difference p. 96
- III. Measurement of N_1 at High Shear Rates p. 103
- IV. Measurement of the Second Normal Stress Difference p. 109
- V. Concluding Remarks p. 112
- References p. 113
- 6 Dynamic Mechanical Properties p. 117
- I. Introduction p. 117
- II. Dependence of Polymer Melt Dynamic Mechanical Properties on Temperature, Molecular Weight, and Polymer Structure p. 121
- III. Boltzmann Superposition Principle p. 125

- IV. Stress Relaxation Modulus p. 127
- V. Dynamic Rheological Properties of Solutions p. 131
- VI. Relevance to Nonlinear Viscoelasticity p. 135
- VII. Concluding Remarks p. 137
- References p. 138
- 7 Extensional Viscosity p. 140
- I. Introduction p. 140
- II. Low-Stretch-Rate Behavior of Extensional Viscosity p. 143
- III. Extensional Viscosity at High Stretch Rates p. 155
- IV. Concluding Remarks p. 164
- References p. 165
- 8 Rigid-Rod and Liquid-Crystal Polymer Rheology p. 170
- I. Introduction p. 170
- II. Viscosity Behavior in the Isotropic State p. 175
- III. Constant-Shear-Rate Behavior in the Nematic State p. 181
- IV. Extensional Flow p. 190
- V. Polydomains and Transient Flow p. 192
- References p. 194
- 9 Yield Stress, Wall Slip, Particle Migration, and Other Observations with Multiphase Systems p. 197
- I. Introduction p. 197
- II. Unstable Suspensions p. 200
- III. Yield Stress Measurement p. 204
- IV. Measurement of the Wall Slip Velocity p. 210
- V. Migration of Particles Across Streamlines p. 217
- VI. Concluding Remarks p. 220
- References p. 220
- 10 Solid-in-Liquid Suspensions p. 224
- I. Introduction p. 224
- II. Shear Viscosity of Concentrated Suspensions of Noncolloidal Particulates p. 226
- III. Shear Viscosity of Colloidal Hard Spheres p. 235
- IV. Shear Thickening in Colloidal Hard Sphere Suspensions p. 239
- V. Elastic Effects p. 241
- VI. Flocculated Suspensions p. 246
- VII. Electrorheology p. 259
- VIII. Concluding Remarks p. 261
- References p. 262
- 11 Short-Fiber Suspensions p. 266
- I. Introduction p. 266
- II. Dilute Fiber Suspensions p. 268
- III. Semiconcentrated Fiber Suspensions p. 271
- IV. Concentrated Fiber Suspensions p. 275
- V. Concluding Remarks p. 280
- References p. 281
- 12 Emulsions p. 284
- I. Introduction p. 284
- II. Viscosity of a Dilute Emulsion of Spherical Droplets p. 287

- III. Drop Deformation and Breakup p. 288
- IV. Elasticity of Dilute Emulsions p. 291
- V. Droplet Coalescence During Shear Flow p. 292
- VI. Rheology of Concentrated Emulsions p. 294
- VII. Concluding Remarks p. 299
- References p. 300
- 13 Gas-Containing Melts and Foams p. 304
- I. Introduction p. 304
- II. Viscosity of Gas-Containing Polymers p. 305
- III. Yielding of Foam p. 308
- IV. Foam Viscosity p. 311
- V. Concluding Remarks p. 314
- References p. 314
- 14 Rheology of Powders and Granular Materials p. 316
- I. Introduction p. 316
- II. Instruments p. 317
- III. Flow Behavior of Particulate Solids p. 320
- IV. Concluding Remarks p. 330
- References p. 330
- 15 Chemorheology and Gelation p. 332
- I. Introduction p. 332
- II. Thermal Characterization of Curing Reactions p. 335
- III. Mechanistic Models of Curing p. 339
- IV. Viscosity as a Function of Conversion p. 340
- V. Polymer Gelation p. 344
- VI. Polymer Vitrification p. 348
- References p. 349
- 16 Flow Through Porous Media p. 352
- I. Introduction p. 352
- II. Dimensional Considerations p. 354
- III. Capillary Model p. 355
- IV. Effect of a Shear-Thinning Viscosity p. 358
- V. Permeability Measurement p. 360
- VI. Fibrous Porous Media p. 362
- VII. Pore Geometry Effects p. 365
- 17 Melt Fracture p. 375
- VIII. Viscoelastic Effects p. 367
- IX. Concluding Remarks p. 371
- References p. 371
- I. Introduction p. 375
- II. Historical Perspective p. 376
- III. Tying Melt Fracture to Wall Slip p. 379
- IV. Adhesion Promotion or Slip Promotion? p. 383
- V. Concluding Remarks p. 383
- References p. 383
- Index p. 387
