

- Foreword p. iii
- Preface p. v
- Acknowledgements p. vii
- 1. Understanding the Power of Overall Equipment Effectiveness (OEE) p. 1
- 1.1 Factories: Effective Producers of Good Goods p. 2
- 1.2 Factory Dynamics p. 3
- 1.3 Balancing the Business p. 4
- Decide II: A Simulation Experience p. 5
- 1.4 Leadership for Teams p. 8
- 1.5 Moving the Community to Improved Performance A Case Study Using OEE Metrics p. 10
- 1.6 Total Effectiveness Equipment Performance (TEEP) p. 17
- 1.7 The Bottom Line: Good Goods at Lowest Cost--Now! p. 20
- 2. Learning the Basics of OEE Metrics p. 25
- 2.1 Definitions of OEE Categories p. 25
- 2.2 Data Collection Review p. 28
- 2.3 Practice Production Report p. 32
- 2.4 Summarization Example p. 33
- 2.5 OEE Formulas and Results p. 36
- Method 1 OEE Using Nakajima Formulas p. 40
- Method 2 OEE Using Event Time Records p. 41
- Method 3 OEE Based On Good Units Transferred p. 41
- 2.6 Reconciliation and Loss Analysis p. 42
- 3. The Financial Aspects of OEE p. 47
- 3.1 Factory Example: Base Case p. 48
- 3.2 Case B: Same Output, Improved OEE p. 52
- 3.3 Case C: Full Factory, Improved OEE p. 54
- 3.4 Case D: OEE Impact on Return On Assets (ROA) p. 56
- 3.5 Case E: Higher OEE with the Same Sales, ROA p. 60
- 3.6 Case F: Higher OEE, Selling Everything Produced, ROA p. 62
- 4. The People Factor p. 67
- 4.1 The Most Important Resource: Actively Learning, Motivated People p. 68
- 4.2 Group Centering Exercise The Metronome Exercise p. 71
- 4.3 Skills, Interaction, Action p. 76
- 4.4 Observation and Education p. 79
- 4.5 Work Group Experiences p. 83
- 4.6 An Example of Expectations: Master Mechanics p. 88
- 4.7 An Example of Expectations: Technicians p. 91
- 4.8 Interviewing and Hiring p. 94
- 4.9 Ranking and Compensating p. 99
- 5. Priority and Decision Tools p. 105
- 5.1 The Value Fulcrum p. 105
- 5.2 Developing a Troubleshooting Guideline Decision Tree p. 109
- 6. Win-Win Maintenance/Equipment Shutdown Strategies p. 113

- 6.1 Steps to Improve TEEP: A Case Study p. 114
- Identify p. 118
- Exploit p. 120
- Subordinate p. 126
- Elevate p. 127
- Go back p. 127
- 6.2 Shutdown Strategy Checklist p. 130
- 7. Reliability 101 p. 137
- 7.1 Reliability 101 Introduction p. 137
- 7.2 Reliability Nomenclature p. 143
- 7.3 Beginning Reliability with What You Have p. 156
- 7.4 Matching Maintenance Strategy to Equipment Function p. 160
- 7.5 Developing Best Practices p. 164
- 7.6 Building Reliability into Equipment Design p. 166
- 8. Reliability Availability Maintainability/System Performance Analysis, (RAM/SPA) p. 173
- 8.1 RAM/SPA p. 174
- 8.2 Improving the 'Horse' you Already Have / Starting Reliability p. 175
- 8.3 Quick Changeovers: Single-Minute Exchange of Dies p. 178
- 8.4 Theory Of Constraints p. 180
- 8.5 Data collection and Information sharing p. 183
- 8.6 Pareto Analysis p. 190
- 8.7 Project Management and Asset Life Cycle p. 192
- 8.8 Speed ups p. 198
- 8.9 Cycle time improvements p. 201
- 8.10 Benchmarking p. 204
- 9. A General Tool for Acceptance Testing p. 215
- 9.1 Reliability Quantification Testing p. 215
- 9.2 Implementation Stories p. 219
- Case 1. Barrel Dumper Project p. 219
- Case 2. Computer System Upgrade p. 220
- Case 3. Material Handling Wheels p. 222
- Case 4. Automatic Core Loading p. 222
- 10. Success or Failure p. 225
- 10.1 The Success Riddle p. 225
- 10.2 Why Factories Fail p. 230
- Impending Failure Study p. 231
- Appendix p. 237
- 1. Recommended Reading p. 237
- 2. RAPTOR p. 238
- 3. Redundancy Equations p. 240
- 4. Generic Failure Rates p. 244
- 5. Mechanical Failure Modes p. 253
- 6. Failure Mode Effects and Criticality Analysis p. 259
- 7. Constructing Pareto Charts p. 264

- 8. Preserving Failure Data p. 271
- Index p. 275
