

- Preface p. xi
- 1. Gas and Liquid Separations Using Membranes: An Overview Benny D. Freeman and Ingo Pinnau p. 1
- 2. Molecular Simulation of Gas Sorption and Diffusion in Silicon-Based Polymers J. R. Fried and Bo Li p. 24
- 3. New Perspectives of Gas Sorption in Solution-Diffusion Membranes N. F. A. van der Vegt p. 39
- 4. Solubility of Gases and Vapors in Glassy Polymer Blends F. Grassia and M. Giacinti Baschetti and F. Doghieri and G. C. Sarti p. 55
- 5. Predicting Gas Solubility in Glassy Polymers through Nonequilibrium EOS F. Doghieri and M. Quinzi and D. G. Rethwisch and G. C. Sarti p. 74
- 6. Nanostructure of Free Volume in Glassy Polymers as Studied by Probe Methods and Computer Simulation Yu. Yampolskii and V. Shantarovich and D. Hofmann and M. Heuchel p. 91
- 7. Fluoropolymer-Hydrocarbon Polymer Composite Membranes for Natural Gas Separation Rajeev S. Prabhakar and Benny D. Freeman p. 106
- 8. Structure, Gas Sorption, and Gas Diffusion of a Low-Density Liquid Crystalline Polyester M. Tsukahara and Y. Tsujita and H. Yoshimizu and T. Kinoshita p. 129
- 9. Gas Permeation Properties of Silane-Cross-Linked Poly(propylene oxide) Kazukiyo Nagai and Tsutomu Nakagawa p. 139
- 10. Gas Transport Properties of Tetramethyl Polysulfones Containing Trimethylsilyl Group Side Substituents Michael D. Guiver and Ying Dai and Gilles P. Robertson and Kwi Jong Lee and Jae Young Jho and Yong Soo Kang p. 154
- 11. Pure- and Mixed-Gas Permeation Properties of Poly(p-tert-butyl diphenylacetylene) Ingo Pinnau and Zhenjie He and Toshio Masuda and Toshikazu Sakaguchi p. 167
- 12. Membrane Separations Using Functionalized Polyphosphazene Materials Frederick F. Stewart and Christopher J. Orme and Mason K. Harrup and Robert P. Lash and Don H. Weinkauff and John D. McCoy p. 177
- 13. Novel Carbon-Silica Membranes for Improved Gas Separation Young Moo Lee and Ho Bum Park p. 190
- 14. Gas Separation and Pervaporation through Microporous Carbon Membranes Derived from Phenolic Resin Hidetoshi Kita and Koji Nanbu and Hiroshi Maeda and Ken-ichi Okamoto p. 203
- 15. Novel Nanostructured Polymer-Inorganic Hybrid Membranes for Vapor-Gas Separation Zhenjie He and Ingo Pinnau and Atsushi Morisato p. 218
- 16. Molecular Chemistry Control of Hybrid Morphology and Transport Properties in Polyimide-Silica Membranes Chris J. Cornelius and Eva Marand and Pavla Meakin and Anita J. Hill p. 234
- 17. Proton Conductivity and Vapor Permeation Properties of Polyimides Containing Sulfonic Acid Groups Tatsuya Watari and Jianhua Fang and Xiaoxia Guo and Kazuhiro Tanaka and Hidetoshi Kita and Ken-ichi Okamoto p. 253
- 18. Formation of Composite Membranes with Ultrathin Skins Using New Methods of Organic Film Formation: Gas-Selective Membranes Merlin L. Bruening p. 269
- 19. Surface Modification of Polymeric Membranes by UV Grafting Doo Hyun Lee and Hyun-II Kim and Sung Soo Kim p. 281

- 20. Effect of Microwave Irradiation on CO₂ Permeability in Cellulose Acetate Membranes Y. Tsujita and Y. Nakai and H. Yoshimizu and M. Yamauchi p. 300
- 21. Improving the Permselectivity of Commercial Cation-Exchange Membranes for Electrodialysis Applications Sophie Tan and Alexis Laforgue and Daniel Belanger p. 311
- 22. Control of Transport Modes of Ions Using a Temperature-Responsive Charged Membrane Mitsuru Higa and Tomoko Yamakawa p. 324
- 23. Ion-Exchange Membranes from Blends of Sulfonated Polyphosphazene and Kynar FLEX PVDF Ryszard Wycisk and Roy Carter and Peter N. Pintauro and Catherine Byrne p. 335
- 24. Behavior of Absorbed Water in and Oxygen Permeability of Hydrophilic Membranes with Bulky Hydrophobic Side Chain Groups Shuichi Takahashi and Akiko Saito and Tsutomu Nakagawa p. 352
- 25. Chemically Modified Polysulfone Hollow Fibers with Zwitterionic Sulfoalkylbetaine Group Having Improved Blood Compatibility Akon Higuchi and Hirokazu Hashiba and Rika Hayashi and Boo Ok Yoon and Mitsuo Hattori and Mariko Hara p. 366
- 26. Selective Protein Adsorption and Cell Attachment to Rubbed Fluorinated Polyimides H. Kawakami and K. Ashiba and Y. Okuyama p. 383
- 27. Separation of Endocrine Disruptors from Aqueous Solutions by Pervaporation: Relationship between the Separation Factor and Solute Physical Parameters Boo Ok Yoon and Takao Asano and Kenta Nakaegawa and Mai Ishige and Mariko Hara and Akon Higuchi p. 394
- 28. Improvement of Selectivities of Microphase-Separated Membranes for the Removal of Volatile Organic Compounds Tadashi Uragami and Hiroshi Yamada and Terumi Meotoiwa and Takashi Miyata p. 411
