

- Section I Overview of Mechatronics
- 1 What is Mechatronics? Robert H. Bishop and M. K. Ramasubramanian p. 1
- 2 Mechatronic Design Approach Rolf Isermann p. 1
- 3 System Interfacing, Instrumentation, and Control Systems Rick Homkes p. 1
- 4 Microprocessor-Based Controllers and Microelectronics Ondrej Novak and Ivan Dolezal p. 1
- 5 An Introduction to Micro- and Nanotechnology Michael Goldfarb and Alvin Strauss and Eric J. Barth p. 1
- 6 Mechatronics: New Directions in Nano-, Micro-, and Mini-Scale Electromechanical Systems Design, and Engineering Curriculum Development Sergey Edward Lyshevski p. 1
- Section II Physical System Modeling
- 7 Modeling Electromechanical Systems Francis C. Moon p. 1
- 8 Structures and Materials Eniko T. Enikov p. 1
- 9 Modeling of Mechanical Systems for Mechatronics Applications Raul G. Longoria p. 1
- 10 Fluid Power Systems Qin Zhang and Carroll E. Goering p. 1
- 11 Electrical Engineering Giorgio Rizzoni p. 1
- 12 Engineering Thermodynamics Michael J. Moran p. 1
- 13 Modeling and Simulation for MEMS Carla Purdy p. 1
- 14 Rotational and Translational Microelectromechanical Systems: MEMS Synthesis, Microfabrication, Analysis, and Optimization Sergey Edward Lyshevski p. 1
- 15 The Physical Basis of Analogies in Physical System Models Neville Hogan and Peter C. Breedveld p. 1
- Section III Sensors and Actuators
- 16 Introduction to Sensors and Actuators M. Anjanappa and K. Datta and T. Song p. 1
- 17 Fundamentals of Time and Frequency Michael A. Lombardi p. 1
- 18 Sensor and Actuator Characteristics Joey Parker p. 1
- 19 Sensors p. 1
- 19.1 Linear and Rotational Sensors Kevin Lynch and Michael Peshkin p. 2
- 19.2 Acceleration Sensors Halit Eren p. 12
- 19.3 Force Measurement M. A. Elbestawi p. 34
- 19.4 Torque and Power Measurement Ivan Garshelis p. 48
- 19.5 Flow Measurement Richard Thorn p. 62
- 19.6 Temperature Measurements Pamela Norris and Bouvard Hosticka p. 73
- 19.7 Distance Measuring and Proximity Sensors J. Fernando Figueroa p. 88
- 19.8 Light Detection, Image, and Vision Systems Stanley Ipson p. 119
- 19.9 Integrated Microsensors Chang Liu p. 136
- 20 Actuators p. 1
- 20.1 Electromechanical Actuators George T.-C. Chiu p. 1
- 20.2 Electrical Machines Charles Fraser p. 33
- 20.3 Piezoelectric Actuators Habil Ramutis Bansevicius and Rymanta Tadas Tolocka p. 51
- 20.4 Hydraulic and Pneumatic Actuation Systems Massimo Sorli and Stefano Pastorelli p. 62
- 20.5 MEMS: Microtransducers Analysis, Design, and Fabrication Sergey Lyshevski p. 96
- Section IV Systems and Controls

- 21 The Role of Controls in Mechatronics Job van Amerongen p. 1
- 22 The Role of Modeling in Mechatronics Design Jeffrey A. Jalkio p. 1
- 23 Signals and Systems p. 1
- 23.1 Continuous- and Discrete-Time Signals Momoh Jimoh Salami p. 1
- 23.2 z Transform and Digital Systems Rolf Johansson p. 29
- 23.3 Continuous- and Discrete-Time State-Space Models Kam Leang and Qingze Zou and Santosh Devasia p. 40
- 23.4 Transfer Functions and Laplace Transforms C. Nelson Dorny p. 54
- 24 State Space Analysis and System Properties Mario E. Salgado and Juan I. Yuz p. 1
- 25 Response of Dynamic Systems Raymond de Callafon p. 1
- 26 The Root Locus Method Hitay Ozbay p. 1
- 27 Frequency Response Methods Jyh-Jong Sheen p. 1
- 28 Kalman Filters as Dynamic System State Observers Timothy P. Crain II p. 1
- 29 Digital Signal Processing for Mechatronic Applications Bonnie S. Heck and Thomas R. Kurfess p. 1
- 30 Control System Design Via H<sup>2</sup> Optimization Armando A. Rodriguez p. 1
- 31 Adaptive and Nonlinear Control Design Maruthi R. Akella p. 1
- 32 Neural Networks and Fuzzy Systems Bogdan M. Wilamowski p. 1
- 33 Advanced Control of an Electrohydraulic Axis Florin Ionescu and Crina Vlad and Dragos Arotaritei p. 1
- 34 Design Optimization of Mechatronic Systems Tomas Brezina and Ctirad Kratochvil and Cestmir Ondrusek p. 1
- Section V Computers and Logic Systems
- 35 Introduction to Computers and Logic Systems Kevin Craig and Fred Stolfi p. 1
- 36 Digital Logic Concepts and Combinational Logic Design George I. Cohn p. 1
- 37 System Interfaces M.J. Tordon and J. Katupitiya p. 1
- 38 Communications and Computer Networks Mohammad Ilyas p. 1
- 39 Fault Analysis in Mechatronic Systems Leila Notash and Thomas N. Moore p. 1
- 40 Logic System Design M. K. Ramasubramanian p. 1
- 41 Synchronous and Asynchronous Sequential Systems Sami A. Al-Arian p. 1
- 42 Architecture Daniel A. Connors and Wen-mei W. Hwu p. 1
- 43 Control with Embedded Computers and Programmable Logic Controllers Hugh Jack and Andrew Sterian p. 1
- Section VI Software and Data Acquisition
- 44 Introduction to Data Acquisition Jace Curtis p. 1
- 45 Measurement Techniques: Sensors and Transducers Cecil Harrison p. 1
- 46 A/D and D/A Conversion Mike Tyler p. 1
- 47 Signal Conditioning Stephen A. Dyer p. 1
- 48 Computer-Based Instrumentation Systems Kris Fuller p. 1
- 49 Software Design and Development Margaret H. Hamilton p. 1
- 50 Data Recording and Logging Tom Magruder p. 1
- Index p. 1
