

## Table of Contents

- Chapter 1 The Pharmacologic Consequences of Modeling Synoptic Receptor Systems Terry Kenakin p. 1
- Chapter 2 The Ternary Complex Model Frederick J. Ehlert p. 21
- Chapter 3 From the Static to the Dynamic: Three Models of Signal Transduction in G Protein-Coupled Receptors Peter J. Woolf and Jennifer J. Linderman p. 87
- Chapter 4 Intramolecular Dynamics and Ligand-Induced Conformational Changes: A Stochastic Model of Receptor Action H. Ongun Onaran and Tommaso Costa p. 109
- Chapter 5 Linking Bioinformatics and Cheminformatics: From Genes to Structure-Activity Relationships Michael W. Lutz p. 135
- Chapter 6 Computer-Intensive Statistical Procedures John Ludbrook p. 171
- Chapter 7 Beyond Eyeballing: Fitting Models to Experimental Data Arthur Christopoulos and Michael J. Lew p. 195
