

- 1 Classification of Heat Exchangers p. 1
- 1.1 Introduction p. 1
- 1.2 Recuperation and Regeneration p. 1
- 1.3 Transfer Processes p. 4
- 1.4 Geometry of Construction p. 6
- 1.4.1 Tubular Heat Exchangers p. 7
- 1.4.2 Plate Heat Exchangers p. 11
- 1.4.3 Extended Surface Heat Exchangers p. 17
- 1.5 Heat Transfer Mechanisms p. 22
- 1.6 Flow Arrangements p. 24
- 1.7 Applications p. 25
- 1.8 Selection of Heat Exchangers p. 26
- References p. 28
- Problems p. 30
- 2 Basic Design Methods of Heat Exchangers p. 33
- 2.1 Introduction p. 33
- 2.2 Arrangement of Flow Path in Heat Exchangers p. 33
- 2.3 Basic Equations in Design p. 35
- 2.4 Overall Heat Transfer Coefficient p. 38
- 2.5 The LMTD Method for Heat Exchanger Analysis p. 43
- 2.5.1 Parallel and Counterflow Heat Exchangers p. 43
- 2.5.2 Multipass and Crossflow Heat Exchangers p. 47
- 2.6 The ϵ -NTU Method for Heat Exchanger Analysis p. 57
- 2.7 Heat Exchanger Design Calculation p. 67
- 2.8 Variable Overall Heat Transfer Coefficient p. 68
- 2.9 Heat Exchanger Design Methodology p. 71
- Nomenclature p. 74
- References p. 75
- Problems p. 76
- 3 Forced Convection Correlations for the Single-Phase Side of Heat Exchangers p. 81
- 3.1 Introduction p. 81
- 3.2 Laminar Forced Convection p. 84
- 3.2.1 Hydrodynamically Developed and Thermally Developing Laminar Flow in Smooth Circular Ducts p. 84
- 3.2.2 Simultaneously Developing Laminar Flow in Smooth Ducts p. 85
- 3.2.3 Laminar Flow through Concentric Annular Smooth Ducts p. 86
- 3.3 The Effect of Variable Physical Properties p. 88
- 3.3.1 Laminar Flow of Liquids p. 90
- 3.3.2 Laminar Flow of Gases p. 93
- 3.4 Turbulent Forced Convection p. 93
- 3.5 Turbulent Flow in Smooth Straight Noncircular Ducts p. 99
- 3.6 Effect of Variable Physical Properties in Turbulent Forced Convection p. 102
- 3.6.1 Turbulent Liquid Flow in Ducts p. 103
- 3.6.2 Turbulent Gas Flow in Ducts p. 104
- 3.7 Summary of Forced Convection in Straight Ducts p. 109
- 3.8 Heat Transfer from Smooth-Tube Bundles p. 112

- 3.9 Heat Transfer in Helical Coils and Spirals p. 116
- 3.9.1 Nusselt Numbers of Helical Coils--Laminar Flow p. 117
- 3.9.2 Nusselt Numbers for Spiral Coils--Laminar Flow p. 118
- 3.9.3 Nusselt Numbers for Helical Coils--Turbulent Flow p. 118
- 3.10 Heat Transfer in Bends p. 119
- 3.10.1 Heat Transfer in 90[degree] Bends p. 121
- 3.10.2 Heat Transfer in 180[degree] Bends p. 121
- Nomenclature p. 122
- References p. 124
- Problems p. 127
- 4 Heat Exchanger Pressure Drop and Pumping Power p. 131
- 4.1 Introduction p. 131
- 4.2 Tube-Side Pressure Drop p. 131
- 4.2.1 Circular Cross Sectional Tubes p. 131
- 4.2.2 Noncircular Cross Sectional Ducts p. 134
- 4.3 Pressure Drop in Tube Bundles in Crossflow p. 137
- 4.4 Pressure Drop in Helical and Spiral Coils p. 139
- 4.4.1 Helical Coils--Laminar Flow p. 140
- 4.4.2 Spiral Coils--Laminar Flow p. 140
- 4.4.3 Helical Coils--Turbulent Flow p. 141
- 4.4.4 Spiral Coils--Turbulent Flow p. 141
- 4.5 Pressure Drop in Bends and Fittings p. 142
- 4.5.1 Pressure Drop in Bends p. 142
- 4.5.2 Pressure Drop in Fittings p. 144
- 4.6 Pressure Drop for Abrupt Contraction, Expansion, and Momentum Change p. 148
- 4.7 Heat Transfer and Pumping Power Relationship p. 149
- Nomenclature p. 151
- References p. 153
- Problems p. 154
- 5 Fouling of Heat Exchangers p. 159
- 5.1 Introduction p. 159
- 5.2 Basic Considerations p. 160
- 5.3 Effects of Fouling p. 162
- 5.3.1 Effect of Fouling on Heat Transfer p. 162
- 5.3.2 Effect of Fouling on Pressure Drop p. 162
- 5.3.3 Cost of Fouling p. 165
- 5.4 Aspects of Fouling p. 166
- 5.4.1 Categories of Fouling p. 166
- 5.4.2 Fundamental Processes of Fouling p. 168
- 5.4.3 Prediction of Fouling p. 170
- 5.5 Design of Heat Exchangers Subject to Fouling p. 172
- 5.5.1 Fouling Resistance p. 172
- 5.5.2 Cleanliness Factor p. 178
- 5.5.3 Percent Over Surface p. 178
- 5.6 Operations of Heat Exchangers Subject to Fouling p. 183
- 5.7 Techniques to Control Fouling p. 185

- 5.7.1 Surface Cleaning Techniques p. 186
- 5.7.2 Additives p. 186
- Nomenclature p. 187
