

- 1. Nano- and Microengineering, and Nano- and Microtechnologies p. 1
- 1.1. Introduction p. 1
- 1.2. Biological Analogies p. 3
- 1.3. Nano- and Microelectromechanical Systems p. 5
- 1.4. Applications of Nano- and Microelectromechanical Systems p. 10
- 1.5. Nano- and Microelectromechanical Systems p. 15
- 1.6. Introduction to MEMS Fabrication, Assembling, and Packaging p. 19
- 2. Mathematical Models and Design of Nano- and Microelectromechanical Systems p. 23
- 2.1. Nano- and Microelectromechanical Systems Architecture p. 23
- 2.2. Electromagnetics and its Application For Nano- and Microscale Electromechanical Motion Devices p. 35
- 2.3. Classical Mechanics and its Application p. 58
- 2.3.1. Newtonian Mechanics p. 60
- 2.3.2. Lagrange Equations of Motion p. 76
- 2.3.3. Hamilton Equations of Motion p. 93
- 2.4. Atomic Structures and Quantum Mechanics p. 95
- 2.5. Molecular and Nanostructure Dynamics p. 105
- 2.5.1. Schrodinger Equation and Wavefunction Theory p. 106
- 2.5.2. Density Functional Theory p. 110
- 2.5.3. Nanostructures and Molecular Dynamics p. 114
- 2.6. Molecular Wires and Molecular Circuits p. 115
- 2.7 Thermoanalysis and Heat Equation p. 126
- 3. Structural Design, Modeling, and Simulation p. 129
- 3.1. Nano- and Microelectromechanical Systems p. 129
- 3.1.1. Carbon Nanotubes and Nanodevices p. 129
- 3.1.2. Microelectromechanical Systems and Microdevices p. 132
- 3.2. Structural Synthesis of Nano- and Microelectromechanical Actuators and Sensors p. 166
- 3.2.1. Configurations and Structural Synthesis of Motion Nano- and Microstructures (actuators and Sensors) p. 166
- 3.2.2. Algebra of Sets p. 173
- 3.3. Direct-Current Micromachines p. 176
- 3.4. Induction Motors p. 196
- 3.4.1. Two-Phase Induction Motors p. 197
- 3.4.2. Three-Phase Induction Motors p. 209
- 3.5. Microscale Synchronous Machines p. 229
- 3.5.1. Single-Phase Reluctance Motors p. 230
- 3.5.2. Permanent-Magnet Synchronous Machines p. 230
- 3.6. Microscale Permanent-Magnet Stepper Motors p. 279
- 3.6.1. Mathematical Model in the Machine Variables p. 279
- 3.6.2. Mathematical Models of Permanent-Magnet Stepper Motors in the Rotor and Synchronous Reference Frames p. 283
- 3.7. Nanomachines: Nanomotors and Nanogenerators p. 296
- 4. Control of Nano- and Microelectromechanical Systems p. 299

- 4.1. Fundamentals of Electromagnetic Radiation and Antennas in Nano- and Microscale Electromechanical Systems p. 299
- 4.2. Design of Closed-Loop Nano- and Microelectromechanical Systems Using the Lyapunov Stability Theory p. 312
- 4.3. Introduction to Intelligent Control of Nano- and Microelectromechanical Systems p. 327
- Index p. 335
