

- Section I Tutorial
- 1 Noise and Digital Signal Processing Stephan Weiss and Robert W. Stewart and Gillian M. Davis p. 3
- Section II System Aspects
- 2 Analog Techniques Malcolm J. Hawksford p. 47
- 3 Hardware Design Considerations Robert S. Oshana p. 71
- 4 Software Design Considerations for Real-Time DSP Systems Elizabeth G. Keate p. 99
- 5 Evaluating the Effects of Noise on Voice Communication Systems William D. Voiers and Alan D. Sharpley and Ira L. Panzer p. 125
- Section III Digital Algorithms and Implementation
- 6 Single-Channel Speech Enhancement Graham P. Eatwell p. 155
- 7 Microphone Arrays Stephen J. Leese p. 179
- 8 Echo Cancellation Stephen J. Leese p. 199
- Section IV Special Applications
- 9 Signal and Feature Compensation Methods for Robust Speech Recognition Rita Singh and Richard M. Stern and Bhiksha Raj p. 219
- 10 Model Compensation and Matched Condition Methods for Robust Speech Recognition Rita Singh and Bhiksha Raj and Richard M. Stern p. 245
- 11 Noise and Voice Quality in VoIP Environments Dennis Hardman p. 277
- 12 Noise Canceling Headsets for Speech Communication Lars Hakansson and Sven Johansson and Mattias Dahl and Per Sjosten and Ingvar Claesson p. 305
- 13 Acoustic Crosstalk Reduction in Loudspeaker-Based Virtual Audio Systems Darren B. Ward p. 329
- 14 Interference in Telephone Circuits George Keratiotis and Larry Lind and Minesh Patel and John W. Cook and Pete Whelan p. 343
- 15 An Adaptive Beamforming Perspective on Convolutional Blind Source Separation Lucas Parra and Craig Fancourt p. 361
- 16 Use of DSP Techniques to Enhance the Performance of Hearing Aids in Noise Douglas M. Chabries and Victor Bray p. 379
- Index p. 393
