

- **Section I Basic Bone Biology and Tissue Engineering**
- **Chapter 1 Developmental Biology of the Skeletal System (p. 3)**
- **Chapter 2 Bone Physiology Dynamics (p. 27)**
- **Chapter 3 Cell Biology of the Skeletal System: Osteoblasts, Osteocytes, Osteoclasts, Bone Marrow Stromal Cells (p. 43)**
- **Section II Basic Bone Biology and Scaffold Designs for Tissue**
- **Chapter 4 The Organic and Inorganic Matrices (p. 91)**
- **Chapter 5 Signaling Molecules for Tissue Engineering (p. 125)**
- **Chapter 6 Biodegradable Polymers and Microspheres in Tissue Engineering (p. 149)**
- **Chapter 7 Design and Fabrication of Bone Tissue Engineering Scaffolds (p. 167)**
- **Section III Applied Principles of Bone Tissue Engineering**
- **Chapter 8 Study Design and Statistical Analysis (p. 195)**
- **Chapter 9 Animal Models for Bone Tissue Engineering of Critical-size Defects (CSDs), Bone Pathologies and Orthopedic Disease States (p. 217)**
- **Chapter 10 Biomechanics (p. 245)**
- **Section IV Clinical Opportunities**
- **Chapter 11 Tissue Engineering of Bone (p. 277)**
- **Chapter 12 Clinical Challenges and Contemporary Solutions: Craniofacial and Dental (p. 303)**
- **Chapter 13 Opportunities in Spinal Applications (p. 315)**
- **Index (p. 331)**
