

## Table of Contents

- Chapter 1 Introduction p. 1
- 1.1 Food quality: a primary concern of the food industry p. 1
- 1.2 Automated evaluation of food quality p. 1
- 1.3 Food quality quantization and process control p. 2
- 1.4 Typical problems in food quality evaluation and process control p. 7
- 1.4.1 Beef quality evaluation p. 7
- 1.4.2 Food odor measurement p. 8
- 1.4.3 Continuous snack food frying quality process control p. 8
- 1.5 How to learn the technologies p. 10
- References p. 10
- Chapter 2 Data acquisition p. 11
- 2.1 Sampling p. 11
- 2.1.1 Example: Sampling for beef grading p. 13
- 2.1.2 Example: Sampling for detection of peanut off-flavors p. 16
- 2.1.3 Example: Sampling for meat quality evaluation p. 19
- 2.1.4 Example: Sampling for snack food eating quality evaluation p. 20
- 2.1.5 Example: Sampling for snack food frying quality process control p. 21
- 2.2 Concepts and systems for data acquisition p. 22
- 2.2.1 Example: Ultrasonic A-mode signal acquisition for beef grading p. 26
- 2.2.2 Example: Electronic nose data acquisition for food odor measurement p. 28
- 2.2.3 Example: Snack food frying data acquisition for quality process control p. 31
- 2.3 Image acquisition p. 33
- 2.3.1 Example: Image acquisition for snack food quality evaluation p. 34
- 2.3.2 Example: Ultrasonic B-mode imaging for beef grading p. 36
- 2.3.3 Example: Elastographic imaging for meat quality evaluation p. 37
- References p. 43
- Chapter 3 Data analysis p. 49
- 3.1 Data preprocessing p. 49
- 3.2 Data analysis p. 54
- 3.2.1 Static data analysis p. 54
- 3.2.1.1 Example: Ultrasonic A-mode signal analysis for beef grading p. 56
- 3.2.1.2 Example: Electronic nose data analysis for detection of peanut off-flavors p. 63
- 3.2.2 Dynamic data analysis p. 66
- 3.2.2.1 Example: Dynamic data analysis of the snack food frying process p. 68
- 3.3 Image processing p. 71
- 3.3.1 Image segmentation p. 71
- 3.3.1.1 Example: Segmentation of elastograms for detection of hard objects in packaged beef rations p. 74
- 3.3.2 Image feature extraction p. 74
- 3.3.2.1 Example: Morphological and Haralick's statistical textural feature extraction from images of snack food samples p. 87
- 3.3.2.2 Example: Feature extraction from ultrasonic B-mode images for beef grading p. 89

- 3.3.2.3 Example: Haralick's statistical textural feature extraction from meat elastograms p. 90
- 3.3.2.4 Example: Wavelet textural feature extraction from meat elastograms p. 90
- References p. 97
- Chapter 4 Modeling p. 99
- 4.1 Modeling strategy p. 99
- 4.1.1 Theoretical and empirical modeling p. 99
- 4.1.2 Static and dynamic modeling p. 101
- 4.2 Linear statistical modeling p. 104
- 4.2.1 Example: Linear statistical modeling based on ultrasonic A-mode signals for beef grading p. 113
- 4.2.2 Example: Linear statistical modeling for food odor pattern recognition by an electronic nose p. 114
- 4.2.3 Example: Linear statistical modeling for meat attribute prediction based on textural features extracted from ultrasonic elastograms p. 115
- 4.2.4 Example: Linear statistical dynamic modeling for snack food frying process control p. 117
- 4.3 ANN modeling p. 121
- 4.3.1 Example: ANN modeling for beef grading p. 130
- 4.3.2 Example: ANN modeling for food odor pattern recognition by an electronic nose p. 131
- References p. 140
- 4.3.3 Example: ANN modeling for snack food eating quality evaluation p. 132
- 4.3.4 Example: ANN modeling for meat attribute prediction p. 133
- 4.3.5 Example: ANN modeling for snack food frying process control p. 137
- Chapter 5 Prediction p. 143
- 5.1 Prediction and classification p. 143
- 5.1.1 Example: Sample classification for beef grading based on linear statistical and ANN models p. 144
- 5.1.2 Example: Electronic nose data classification for food odor pattern recognition p. 146
- 5.1.3 Example: Snack food classification for eating quality evaluation based on linear statistical and ANN models p. 148
- 5.1.4 Example: Meat attribute prediction based on linear statistical and ANN models p. 149
- 5.2 One-step-ahead prediction p. 150
- 5.2.1 Example: One-step-ahead prediction for snack food frying process control p. 152
- 5.3 Multiple-step-ahead prediction p. 154
- 5.3.1 Example: Multiple-step-ahead prediction for snack food frying process control p. 162
- References p. 165
- Chapter 6 Control p. 167
- 6.1 Process control p. 167
- 6.2 Internal model control p. 168
- 6.2.1 Example: ANNIMC for the snack food frying process p. 179
- Chapter 7 Systems integration p. 201

- 6.3 Predictive control p. 184
- 6.3.1 Example: Neuro-fuzzy PDC for snack food frying process p. 196
- References p. 200
- 7.1 Food quality quantization systems integration p. 201
- 7.2 Food quality process control systems integration p. 203
- 7.3 Food quality quantization and process control systems development p. 207
- 7.4 Concluding remarks p. 211
- References p. 212
- Index p. 213
