

- Preface and acknowledgements p. xi
- Preface to 2nd edition p. xiii
- 1 Introduction p. 1
- 1.1 General p. 1
- 1.2 Basic principles of electrical systems p. 3
- 1.3 Protection requirements p. 3
- 1.4 Protection zones p. 5
- 1.5 Primary and back-up protection p. 5
- 1.5.1 Primary protection p. 5
- 1.5.2 Back-up protection p. 5
- 1.6 Directional protection p. 7
- 1.7 Exercise 1.1 p. 9
- 2 Calculation of short-circuit currents p. 11
- 2.1 Modelling for short-circuit current calculations p. 11
- 2.1.1 Effect of the system impedance p. 11
- 2.1.2 Effect of rotating machinery p. 13
- 2.1.3 Types of fault duty p. 14
- 2.1.4 Calculation of fault duty values p. 16
- 2.2 Methods for calculating short-circuit currents p. 19
- 2.2.1 Importance and construction of sequence networks p. 22
- 2.2.2 Calculation of asymmetrical faults using symmetrical components p. 23
- 2.2.3 Equivalent impedances for a power system p. 26
- 2.3 Supplying the current and voltage signals to protection systems p. 26
- 2.4 Calculation of faults by computer p. 28
- 3 Classification and function of relays p. 31
- 3.1 Classification p. 31
- 3.1.1 Construction p. 31
- 3.1.2 Incoming signal p. 31
- 3.1.3 Function p. 32
- 3.1.4 International identification of electrical devices p. 32
- 3.2 Electromechanical relays p. 33
- 3.2.1 Attraction relays p. 33
- 3.2.2 Relays with moveable coils p. 34
- 3.2.3 Induction relays p. 35
- 3.3 Evolution of protection relays p. 38
- 3.4 Numerical protection p. 39
- 3.4.1 General p. 39
- 3.4.2 Characteristics of numerical relays p. 39
- 3.4.3 Typical architectures of numerical relays p. 40
- 3.4.4 Standard functions of numerical relays p. 41
- 3.5 Supplies to the relay circuits p. 43
- 4 Current and voltage transformers p. 45
- 4.1 Voltage transformers p. 45
- 4.1.1 Equivalent circuit p. 45
- 4.1.2 Errors p. 46
- 4.1.3 Burden p. 47

- 4.1.4 Selection of VTs p. 47
- 4.1.5 Capacitor voltage transformers p. 47
- 4.2 Current transformers p. 51
- 4.2.1 Equivalent circuit p. 51
- 4.2.2 Errors p. 52
- 4.2.3 AC saturation p. 52
- 4.2.4 Burden p. 53
- 4.2.5 Selection of CTs p. 53
- 4.2.6 DC saturation p. 59
- 4.2.7 Precautions when working with CTs p. 59
- 5 Overcurrent protection p. 63
- 5.1 General p. 63
- 5.2 Types of overcurrent relay p. 63
- 5.2.1 Definite-current relays p. 63
- 5.2.2 Definite-time/current or definite-time relays p. 66
- 5.2.3 Inverse-time relays p. 66
- 5.3 Setting overcurrent relays p. 66
- 5.3.1 Setting instantaneous units p. 67
- 5.3.2 Coverage of instantaneous units protecting lines between substations p. 68
- 5.3.3 Setting the parameters of time delay overcurrent relays p. 70
- 5.4 Constraints of relay co-ordination p. 73
- 5.4.1 Minimum short-circuit levels p. 73
- 5.4.2 Thermal limits p. 73
- 5.4.3 Pick-up values p. 75
- 5.5 Co-ordination across Dy transformers p. 86
- 5.6 Co-ordination with fuses p. 96
- 5.7 Co-ordination of negative-sequence units p. 96
- 5.8 Overcurrent relays with voltage control p. 97
- 5.9 Setting overcurrent relays using software techniques p. 98
- 5.10 Use of digital logic in numerical relaying p. 99
- 5.10.1 General p. 99
- 5.10.2 Principles of digital logic p. 99
- 5.10.3 Logic schemes p. 100
- 5.11 Adaptive protection with group settings change p. 102
- 5.12 Exercises p. 104
- 6 Fuses, reclosers and sectionalisers p. 109
- 6.1 Equipment p. 109
- 6.1.1 Reclosers p. 109
- 6.2.1 Fuse-fuse co-ordination p. 117
- 6.1.2 Sectionalisers p. 113
- 6.1.3 Fuses p. 114
- 6.2 Criteria for co-ordination of time/current devices in distribution systems p. 117
- 6.2.2 Recloser-fuse co-ordination p. 117
- 6.2.3 Recloser-recloser co-ordination p. 120
- 6.2.4 Recloser-relay co-ordination p. 122
- 7.1 Construction p. 127

- 6.2.5 Recloser-sectionaliser co-ordination p. 123
- 6.2.6 Recloser-sectionaliser-fuse co-ordination p. 123
- 7 Directional overcurrent relays p. 127
- 7.2 Principle of operation p. 128
- 7.3 Relay connections p. 128
 - 7.3.1 30[degree] connection (0[degree] AMT) p. 129
 - 7.3.2 60[degree] connection (0[degree] AMT) p. 129
 - 7.3.3 90[degree] connection (30[degree] AMT) p. 130
 - 7.3.4 90[degree] connection (45[degree] AMT) p. 131
- 7.4 Directional earth-fault relays p. 131
- 7.5 Co-ordination of instantaneous units p. 137
- 7.6 Setting of time-delay directional overcurrent units p. 141
 - 7.6.1 Pick-up setting p. 141
 - 7.6.2 Time dial setting p. 142
- 7.7 Exercises p. 146
- 8 Differential protection p. 149
 - 8.1 General p. 149
 - 8.2 Classification of differential protection p. 152
 - 8.3 Transformer differential protection p. 152
 - 8.3.1 Basic considerations p. 153
 - 8.3.2 Selection and connection of CTs p. 154
 - 8.3.3 Percentage of winding protected by the differential relay during an earth fault p. 159
 - 8.3.4 Determination of the slope p. 161
 - 8.3.5 Distribution of fault current in power transformers p. 162
 - 8.4 Differential protection for generators and rotating machines p. 164
 - 8.5 Line differential protection p. 164
 - 8.6 Busbar differential protection p. 168
 - 8.6.1 Differential system with multiple restraint p. 168
 - 8.6.2 High impedance differential system p. 169
 - 8.7 Exercises p. 170
- 9 Distance protection p. 173
 - 9.1 General p. 173
 - 9.2 Types of distance relays p. 174
 - 9.2.1 Impedance relay p. 176
 - 9.2.2 Directional relay p. 179
 - 9.2.3 Reactance relay p. 180
 - 9.2.4 Mho relay p. 181
 - 9.2.5 Completely polarised mho relay p. 182
 - 9.2.6 Relays with lens characteristics p. 183
 - 9.2.7 Relays with polygonal characteristics p. 183
 - 9.2.8 Relays with combined characteristics p. 185
 - 9.3 Setting the reach and operating time of distance relays p. 185
 - 9.4 The effect of infeeds on distance relays p. 188
 - 9.5 The effect of arc resistance on distance protection p. 193
 - 9.6 Residual compensation p. 194

- 9.7 Impedances seen by distance relays p. 195
- 9.7.1 Phase units p. 195
- 9.7.2 Earth-fault units p. 196
- 9.8 Power system oscillations p. 196
- 9.9 The effective cover of distance relays p. 199
- 9.10 Maximum load check p. 200
- 9.11 Drawing relay settings p. 203
- 9.12 Intertripping schemes p. 212
- 9.12.1 Under reach with direct tripping p. 213
- 9.12.2 Permissive under reach intertripping p. 213
- 9.12.3 Permissive over reach intertripping p. 214
- 9.13 Distance relays on series-compensated lines p. 214
- 9.14 Technical considerations of distance protection in tee circuits p. 215
- 9.14.1 Tee connection with infeeds at two terminals p. 215
- 9.14.2 Tee connection with infeeds at all three terminals p. 218
- 9.15 Use of distance relays for the detection of the loss of excitation in generators p. 219
- 9.16 Exercises p. 222
- 10 Protection of industrial systems p. 225
- 10.1 Protection devices p. 225
- 10.1.1 Overcurrent relays p. 225
- 10.1.2 Direct acting devices in power and moulded-case circuit breakers p. 225
- 10.1.3 Combined thermal relay contactor and fuse p. 226
- 10.2 Criteria for setting overcurrent protection devices associated with motors p. 226
- 10.2.1 Thermal relays p. 226
- 10.2.2 Low voltage breakers p. 227
- 11 Industrial plant load shedding p. 239
- 11.1 Power system operation after loss of generation p. 239
- 11.2 Design of an automatic load shedding system p. 240
- 11.2.1 Simple machine model p. 240
- 11.2.2 Parameters for implementing a load shedding system p. 241
- 11.3 Criteria for setting frequency relays p. 242
- 11.3.1 Operating times p. 242
- 11.3.2 Determination of the frequency variation p. 243
- 11.4 Example of calculating and setting frequency relays in an industrial plant p. 243
- 11.4.4 Load shedding stages p. 243
- 11.4.1 Calculation of overload p. 243
- 11.4.2 Load to be shed p. 243
- 11.4.3 Frequency levels p. 243
- 11.4.5 Determination of the frequency relay settings p. 244
- 11.4.6 Verification of operation p. 247
- 12 Protection schemes and substation design diagrams p. 251
- 12.1 Protection schemes p. 251
- 12.1.1 Generator protection p. 251
- 12.1.2 Motor protection p. 252
- 12.1.3 Transformer protection p. 258
- 12.1.4 Line protection p. 261

- 12.2 Substation design diagrams p. 261
- 12.2.1 Single-line diagrams p. 262
- 12.2.2 Substation layout diagrams p. 263
- 12.2.3 Diagrams of AC connections p. 264
- 12.2.4 Diagrams of DC connections p. 265
- 12.2.5 Wiring diagrams p. 266
- 12.2.6 Logic diagrams p. 268
- 12.2.7 Cabling lists p. 268
- 13 Processing alarms p. 269
- 13.1 General p. 269
- 13.2 Alarm processing methods p. 270
- 13.3 Expert systems p. 271
- 13.4 Equivalent alarms p. 272
- 13.5 Rules p. 273
- 13.6 Finger printing approach p. 273
- 13.7 Hypothesis approach p. 275
- 14 Installation, testing and maintenance of protection systems p. 283
- 14.1 Installation of protection equipment p. 283
- 14.2 Testing protection schemes p. 285
- 14.2.1 Factory tests p. 285
- 14.2.2 Precommissioning tests p. 285
- 14.2.3 Periodic maintenance p. 290
- 14.3 Commissioning numerical protection p. 292
- 14.3.1 Setting the parameters p. 292
- 14.3.2 Performance tests p. 293
- Bibliography p. 297
- Appendix Solutions of exercises p. 301
- Index p. 339
