

- Preface p. ix
- Acknowledgments p. xii
- 1. Introduction to Drilling Technologies for Oil and Gas in Russia and the FSU p. 1
 - Progress of Well Drilling Technology in the Second Half of the 19th Century and the Beginning of the 20th Century p. 1
 - Milestones of Drilling Technology Development in the FSU after Nationalization of the Oil Industry (1920-1945) p. 7
 - Principal Stages of Drilling Technology Development in the FSU and Drilling Operations Management in the Postwar Period p. 15
 - Development and implementation of turbodrilling for vertical and directional single and cluster wells p. 15
 - Development and implementation of electrodrilling technology for drilling single and cluster vertical and directional wells p. 25
 - New trends in drilling technology and commercial application of downhole motors p. 27
 - Main Components and Management of Drilling Operations, Personnel Training, Scientific Research, and Design Work in the FSU p. 30
 - Exploratory and key stratigraphic drilling p. 30
 - Management of drilling operations in the oil and gas industry p. 34
 - Occupational training in the oil industry p. 35
 - Scientific work p. 36
 - Negative Trends in FSU Drilling Industry Developments p. 38
 - Significant decline in the growth of geological exploration p. 38
 - Insufficient capital investments p. 39
 - Rigid planning of drilling activity p. 40
 - Absence of private property ownership, private entrepreneurship, and initiative p. 42
 - Did a new era begin in Russia? p. 44
 - Value of Scientific Research and Design and the Feasibility of Their Use in Modern Drilling Practices p. 46
 - Why We Decided to Write This Book p. 48
 - References p. 50
- 2. Downhole Motor Drilling Technology and Applications p. 53
 - Development of Turbodrills--Characteristics and Fields of Application p. 53
 - From a gear-reduction turbodrill with a single-stage turbine to a multistage hydro-turbine motor p. 53
 - Development of the multistage turbine theory p. 64
 - Development trends of hydraulic downhole motors in the FSU p. 82
 - Turbodrill design evolution p. 91
 - Geared turbodrills--new winds of development p. 126
 - Turbodrilling experience in the 1990s--a new challenge p. 138
 - Positive Displacement (Screw) Downhole Motors p. 154
 - PDM principal design p. 154
 - PDM working cycle p. 155
 - Low-speed high-torque PDM application p. 161
 - PDM case studies p. 165

- Sectional PDM p. 169
- Workover and other PDM applications p. 172
- Electrodrills p. 172
- Prehistory p. 172
- First 10 years of field applications experience p. 174
- Improved commercial electrodrilling systems (1963-1970) p. 176
- Electrodrilling technology p. 186
- Future developments p. 188
- Electrodrill as a bottomhole transmitter p. 190
- Conclusions p. 192
- References p. 193
- 3. Well Drilling Optimization Methods in the FSU p. 199
 - Mission Statement and Substantiation of the Necessity for Developing a New Method of Well Drilling Technology Optimization p. 199
 - KTW Drilling Principles and Procedures for Implementation p. 202
 - Development of a Mathematical Model of Well Deepening and Its Use in KTW Drilling p. 205
 - Analysis of existing optimization techniques of the well-deepening process p. 205
 - Test studies and development of a mathematical model of the well-deepening process p. 210
 - Analysis of the effect of round trip speed on levels of the main regulated drilling parameters--bit weight and rotational speed p. 226
 - Well-deepening optimization techniques when drilling with blade-type drag bits p. 232
 - Results of Drilling Experimental and KTWs and Application of the KTW Technique in Developing Certain Fields p. 242
 - Wells drilled in Azerbaijan p. 242
 - Wells drilled in the Samara Region p. 250
 - Wells drilled in the Bashkiriya region p. 257
 - Drilling wells in the Urals-Volga oil and gas province using dynamic processes to intensify rock destruction at the bottomhole p. 264
 - Experience from KTW Drilling and Results of Its Implementation p. 267
 - Areas of Feasible Application of Various Drilling Methods--Rotary, DHM, and Electrodrilling p. 272
 - Drill bit rotational speed as optimization criteria p. 272
 - Test wells drilling in 1979-1980 p. 276
 - Typical areas of application for rotary drilling p. 281
 - Typical areas of application for hydraulic DHM p. 281
 - Typical areas of application for electrodrilling p. 282
 - Drilling Optimization System Conclusions p. 283
 - References p. 285
 - Volume 1 Conclusion p. 291
 - Acronyms p. 293
 - Appendix Contents for Volume 2 p. 297
 - Index p. 301
