

- Preface p. xvii
- 1 Fundamental Concepts p. 1
- 1.1 Introduction p. 2
- 1.2 Brief History of Wireless Telecommunication p. 2
 - The Beginning p. 2
 - Postwar Expansion p. 3
 - The Cellular Revolution p. 4
- 1.3 Elements of a Wireless Communication System p. 4
 - Simplex and Duplex Communication p. 5
 - Wireless Networks p. 6
- 1.4 Signals and Noise p. 7
 - Modulated Signals p. 7
 - Noise p. 8
 - Signal-to-Noise Ratio p. 10
 - Noise Figure and Noise Temperature p. 10
- 1.5 The Frequency Domain p. 12
 - Fourier Series p. 13
 - Effect of Filtering on Signals p. 21
 - Noise in the Frequency Domain p. 22
- 1.6 The Radio-Frequency Spectrum p. 23
 - Bandwidth Requirements p. 25
 - Frequency Reuse p. 27
- 1.7 "Convergence" and Wireless Communication p. 28
- 2 Analog Modulation Schemes p. 35
 - 2.1 Introduction p. 36
 - 2.2 Amplitude Modulation p. 36
 - Time-Domain Analysis p. 38
 - Modulation Index p. 40
 - Overmodulation p. 42
 - Modulation Index for Multiple Modulating Frequencies p. 43
 - Measurement of Modulation Index p. 43
 - Frequency-Domain Analysis p. 44
 - Bandwidth p. 47
 - Power Relationships p. 48
 - Measuring Modulation Index in the Frequency Domain p. 51
 - 2.3 Suppressed-Carrier AM Systems p. 53
 - 2.4 Frequency and Phase Modulation p. 55
 - Frequency Modulation p. 56
 - The Angle Modulation Spectrum p. 58
 - Bessel Functions p. 58
 - Bandwidth p. 66
 - Carson's Rule p. 66
 - Narrowband and Wideband FM p. 68
 - FM and Noise p. 69
 - Threshold Effect and Capture Effect p. 72
 - Pre-emphasis and De-emphasis p. 72

- 3 Digital Communication p. 83
- 3.1 Introduction p. 84
- 3.2 Sampling p. 85
 - Sampling Rate p. 85
 - Natural and Flat-Topped Sampling p. 89
 - Analog Pulse Modulation p. 90
- 3.3 Pulse-Code Modulation p. 90
 - Quantization and Quantizing Noise p. 90
 - Bit Rate p. 93
 - Companding p. 94
 - Coding and Decoding p. 95
 - Differential PCM p. 99
- 3.4 Delta Modulation p. 99
 - Adaptive Delta Modulation p. 100
- 3.5 Data Compression p. 100
 - Lossy and Lossless Compression p. 102
 - Vocoder p. 102
- 4 Digital Modulation p. 111
- 4.1 Introduction p. 112
- 4.2 Frequency-Shift Keying p. 118
 - Gaussian Minimum-Shift Keying p. 120
- 4.3 Phase-Shift Keying p. 121
 - $\pi/4$ Delta Phase-Shift Keying p. 122
- 4.4 Quadrature Amplitude Modulation p. 123
- 4.5 Multiplexing and Multiple Access p. 124
 - Frequency-Division Multiplexing and Multiple Access p. 125
 - Time-Division Multiplexing and Multiple Access p. 125
 - TDM in Telephony p. 125
 - Time-Division Multiple Access p. 126
- 4.6 Spread-Spectrum Systems p. 126
 - Frequency-Hopping Systems p. 129
 - Direct-Sequence Systems p. 130
 - Reception of Spread-Spectrum Signals p. 132
 - Code-Division Multiple Access (CDMA) p. 133
- 5 Basic Telephony p. 141
- 5.1 Introduction p. 142
- 5.2 Network Topology p. 142
 - PSTN Structure p. 143
- 5.3 The Local Loop and Its Signals p. 145
- 5.4 Digital Telephony p. 150
 - Time-Division Multiplexing p. 151
 - Digital Signal Hierarchy p. 152
- 5.5 Telephone-Network Signaling p. 154
 - Signaling System Seven p. 154
- 5.6 Digital Local Loops p. 156
 - Integrated Services Digital Network (ISDN) p. 156

- Asymmetrical Digital Subscriber Line (ADSL) p. 158
- 6 Transmission Lines and Waveguides p. 165
 - 6.1 Introduction p. 166
 - 6.2 Electromagnetic Waves p. 166
 - 6.3 Propagation on Transmission Lines p. 168
 - Electrical Model of a Transmission Line p. 171
 - Characteristic Impedance p. 172
 - Propagation Velocity and Velocity Factor p. 175
 - Traveling Waves on a Transmission Line p. 176
 - 6.4 Reflections and Standing Waves p. 179
 - Variation of Impedance Along a Line p. 187
 - Characteristics of Shorted and Open Lines p. 188
 - 6.5 Transmission Line Losses p. 191
 - 6.6 Waveguides p. 192
 - Modes and Cutoff Frequency p. 193
 - Group and Phase Velocity p. 196
 - Waveguide Impedance p. 201
 - Coupling Power into and out of Waveguides p. 203
 - Waveguide Components p. 205
 - Bends and Tees p. 205
 - Cavity Resonators p. 207
 - Waveguide Attenuators and Loads p. 208
 - Circulators and Isolators p. 209
- 7 Radio Propagation p. 219
 - 7.1 Introduction p. 220
 - 7.2 Free-Space Propagation p. 221
 - Receiving Antenna Gain and Effective Area p. 226
 - Path Loss p. 226
 - 7.3 Terrestrial Propagation p. 231
 - Line-of-Sight Propagation p. 231
 - Multipath Propagation p. 233
 - The Mobile Environment p. 235
 - Repeaters and Cellular Systems p. 239
 - Control of Fading in Mobile Systems p. 246
 - 7.4 Satellite Propagation p. 247
- 8 Antennas p. 257
 - 8.1 Introduction p. 258
 - 8.2 Simple Antennas p. 258
 - Radiation Resistance p. 261
 - 8.3 Antenna Characteristics p. 263
 - Radiation Pattern p. 263
 - Gain and Directivity p. 267
 - Beamwidth p. 269
 - Front-to-Back Ratio p. 269
 - Major and Minor Lobes p. 270
 - Effective Isotropic Radiated Power and Effective Radiated Power p. 271

- Impedance p. 272
- Polarization p. 273
- 8.4 Other Simple Antennas p. 273
- Folded Dipole p. 273
- Monopole Antenna p. 275
- The Five-Eighths Wavelength Antenna p. 278
- The Discone Antenna p. 279
- Helical Antennas p. 280
- Slot Antenna p. 283
- Horn Antenna p. 283
- Patch Antenna p. 286
- 8.5 Antenna Arrays p. 288
- Phased Arrays p. 289
- Parasitic Arrays p. 296
- 8.6 Reflectors p. 297
- Plane and Corner Reflectors p. 297
- Parabolic Reflector p. 298
- 8.7 Cellular and PCS Antennas p. 303
- Cell-Site Antennas p. 303
- Mobile and Portable Antennas p. 310
- 9 Transmitter and Receiver Circuitry p. 317
- 9.1 Introduction p. 318
- 9.2 Transmitters p. 318
- Basic Topologies p. 318
- Frequency Synthesizer p. 321
- Carrier Oscillator p. 322
- Analog Modulation p. 322
- Amplitude Modulation p. 323
- Digital Modulation p. 327
- Mixing p. 329
- Power Amplification p. 331
- Transmitter Specifications p. 335
- 9.3 Receivers p. 339
- The Basic Superheterodyne Receiver p. 340
- The Front End p. 341
- The Mixer and Local Oscillator p. 341
- IF Amplifier p. 344
- Demodulation p. 345
- Receiver Specifications p. 348
- 9.4 Transceivers p. 356
- Half-Duplex Transceivers p. 356
- Mobile and Portable Telephones p. 357
- 10 Cellular Radio p. 365
- 10.1 Introduction p. 366
- 10.2 Historical Overview p. 366
- Citizens' Band Radio p. 366

- Cordless Telephones p. 370
- Improved Mobile Telephone Service (IMTS) p. 373
- 10.3 Introduction to the Advanced Mobile Phone System (AMPS) p. 374
- Cellular Carriers and Frequencies p. 376
- Channel Allocation p. 377
- Frequency Reuse p. 377
- 10.4 AMPS Control System p. 379
- Mobile and Base Identification p. 380
- Turning on a Phone p. 381
- Originating a Call p. 382
- Receiving a Call p. 382
- Handoffs p. 383
- 10.5 Security and Privacy p. 383
- 10.6 Cellular Telephone Specifications and Operation p. 384
- Transmitter Power and Frequency p. 384
- Transmitter Modulation p. 386
- Mobile and Portable Antennas p. 387
- 10.7 Cell-Site Equipment p. 387
- Traffic and Cell Splitting p. 390
- Microcells, Picocells and Repeaters p. 394
- 10.8 Fax and Data Communication Using Cellular Phones p. 397
- Cellular Modems p. 397
- Cellular Digital Packet Data (CDPD) p. 399
- 10.9 Digital Cellular Systems p. 399
- Advantages of Digital Cellular Radio p. 400
- Conversion of AMPS to TDMA p. 401
- TDMA Voice Channel p. 402
- TDMA Control Channels p. 405
- Privacy and Security in Digital Cellular Radio p. 405
- Dual-Mode Systems and Phones p. 406
- Data Communication with Digital Cellular Systems p. 406
- 11 Personal Communication Systems p. 417
- 11.1 Introduction p. 418
- 11.2 Differences Between Cellular Systems and PCS p. 419
- Frequency Range p. 419
- Smaller Cell Size p. 420
- All-Digital System p. 421
- Extra Features p. 421
- Coverage p. 421
- Rate Structure p. 422
- 11.3 IS-136 (TDMA) PCS p. 422
- TDMA Digital Control Channel p. 422
- 11.4 GSM p. 425
- GSM RF Channels and Time Slots p. 425
- Voice Transmission p. 427
- Frequency Hopping in GSM p. 428

- Subscriber ID Module p. 428
