

- Preface to the Second Edition p. xv
- Preface to the First Edition p. xvii
- I General Considerations p. 1
- 1 Introduction p. 3
- 1.1 Notation for stress and displacement p. 4
- 1.2 Strains and their relation to displacements p. 12
- 1.3 Stress-strain relations p. 18
- Problems p. 20
- 2 Equilibrium and Compatibility p. 23
- 2.1 Equilibrium equations p. 23
- 2.2 Compatibility equations p. 24
- 2.3 Equilibrium equations for displacements p. 29
- Problems p. 29
- II Two-Dimensional Problems p. 31
- 3 Plane Strain and Plane Stress p. 33
- 3.1 Plane strain p. 33
- 3.2 Plane stress p. 36
- Problems p. 39
- 4 Stress Function Formulation p. 41
- 4.1 The concept of a scalar stress function p. 41
- 4.2 Choice of a suitable form p. 42
- 4.3 The Airy stress function p. 42
- 4.4 The governing equation p. 43
- Problem p. 45
- 5 Problems in Rectangular Coordinates p. 49
- 5.1 Biharmonic polynomial functions p. 49
- 5.2 Rectangular beam problems p. 53
- 5.3 Series and transform solutions p. 62
- Problems p. 67
- 6 End Effects p. 71
- 6.1 Decaying solutions p. 71
- 6.2 The corrective solution p. 72
- 6.3 Other Saint-Venant problems p. 77
- Problems p. 77
- 7 Body Forces p. 79
- 7.1 Stress function formulation p. 79
- 7.2 Particular cases p. 81
- 7.3 Solution for the stress function p. 85
- 7.4 Rotational acceleration p. 88
- Problems p. 93
- 8 Problems in Polar Coordinates p. 97
- 8.1 Expressions for stress components p. 97
- 8.2 Strain components p. 99
- 8.3 Fourier series expansion p. 99
- 8.4 The Michell solution p. 106
- Problems p. 109

- 9 Calculation of Displacements p. 111
- 9.1 The cantilever with an end load p. 111
- 9.2 The circular hole p. 115
- 9.3 Displacements for the Michell solution p. 117
- Problems p. 121
- 10 Curved Beam Problems p. 123
- 10.1 Loading at the ends p. 123
- 10.2 Eigenvalues and eigenfunctions p. 127
- 10.3 The inhomogeneous problem p. 128
- 10.4 Some general considerations p. 134
- Problem p. 135
- 11 Wedge Problems p. 137
- 11.1 Power law tractions p. 137
- 11.2 Williams' asymptotic method p. 141
- 11.3 General loading of the faces p. 152
- Problems p. 153
- 12 Plane Contact Problems p. 157
- 12.1 Self-similarity p. 157
- 12.2 The Flamant Solution p. 158
- 12.3 The half-plane p. 159
- 12.4 Distributed normal tractions p. 161
- 12.5 Frictionless contact problems p. 162
- 12.6 Problems with two deformable bodies p. 169
- 12.7 Uncoupled problems p. 172
- 12.8 Combined normal and tangential loading p. 173
- Problems p. 180
- 13 Forces, Dislocations and Cracks p. 185
- 13.1 The Kelvin solution p. 185
- 13.2 Dislocations p. 188
- 13.3 Crack problems p. 193
- Problems p. 198
- 14 Thermoelasticity p. 201
- 14.1 The governing equation p. 201
- 14.2 Heat conduction p. 203
- 14.3 Steady-state problems p. 204
- Problems p. 206
- 15 Antiplane Shear p. 209
- 15.1 Transformation of coordinates p. 210
- 15.2 Boundary conditions p. 210
- 15.3 The rectangular bar p. 211
- 15.4 The concentrated line force p. 212
- 15.5 The screw dislocation p. 213
- Problems p. 214
- III End Loading of the Prismatic Bar p. 219
- 16 Torsion of a Prismatic Bar p. 223
- 16.1 Prandtl's stress function p. 224

- 16.2 The membrane analogy p. 227
- 16.3 Thin-walled open sections p. 227
- 16.4 The rectangular bar p. 229
- 16.5 Multiply-connected (closed) sections p. 231
- Problems p. 233
- 17 Shear of a Prismatic Bar p. 239
- 17.1 The semi-inverse method p. 239
- 17.2 Stress function formulation p. 240
- 17.3 The boundary condition p. 241
- 17.4 Methods of solution p. 242
- Problems p. 246
- IV Three Dimensional Problems p. 249
- 18 Displacement Function Solutions p. 251
- 18.1 The strain potential p. 251
- 18.2 The Galerkin vector p. 252
- 18.3 The Papkovitch-Neuber solution p. 254
- 18.4 Completeness and uniqueness p. 255
- 18.5 Body forces p. 259
- Problems p. 260
- 19 The Boussinesq Potentials p. 263
- 19.1 Solution A: The strain potential p. 264
- 19.2 Solution B p. 264
- 19.3 Solution E: Rotational deformation p. 265
- 19.4 Other coordinate systems p. 266
- 19.5 Solutions obtained by superposition p. 269
- 19.6 The plane strain solution in complex variables p. 272
- Problems p. 276
- 20 Thermoelastic Displacement Potentials p. 279
- 20.1 Plane problems p. 281
- 20.2 The method of strain suppression p. 283
- 20.3 Steady-state temperature: Solution T p. 283
- Problems p. 287
- 21 Singular Solutions p. 291
- 21.1 The source solution p. 291
- 21.2 Dimensional considerations p. 294
- 21.3 Other singular solutions p. 298
- Problems p. 299
- 22 Spherical Harmonics p. 301
- 22.1 Fourier series solution p. 302
- 22.2 Reduction to Legendre's equation p. 302
- 22.3 Axisymmetric potentials and Legendre polynomials p. 303
- 22.4 Non-axisymmetric harmonics p. 305
- 22.5 Cartesian and cylindrical polar coordinates p. 305
- 22.6 Harmonic potentials with logarithmic terms p. 306
- 22.7 Non-axisymmetric cylindrical potentials p. 309
- Problems p. 311

- 23 Cylinders and Circular Plates p. 313
- 23.1 Axisymmetric problems for cylinders p. 313
- 23.2 Axisymmetric circular plates p. 319
- 23.3 Non-axisymmetric problems p. 322
- Problems p. 324
- 24 Problems in Spherical Coordinates p. 327
- 24.1 Solid and hollow spheres p. 327
- 24.2 Conical bars p. 330
- Problems p. 336
- 25 Axisymmetric Torsion p. 341
- 25.1 The transmitted torque p. 342
- 25.2 The governing equation p. 342
- 25.3 Solution of the governing equation p. 343
- 25.4 The displacement field p. 345
- 25.5 Cylindrical and conical bars p. 346
- 25.6 The Saint Venant problem p. 348
- Problems p. 349
- 26 Frictionless Contact p. 351
- 26.1 Boundary conditions p. 351
- 26.2 Determining the contact area p. 353
- Problems p. 355
- 27 The Boundary-Value Problem p. 359
- 27.1 Hankel transform methods p. 359
- 27.2 Collins' Method p. 360
- 27.3 Choice of form p. 368
- Problems p. 369
- 28 The Penny-Shaped Crack p. 373
- 28.1 The penny-shaped crack in tension p. 373
- 28.2 Thermoelastic problems p. 375
- Problems p. 379
- 29 The Interface Crack p. 381
- 29.1 The uncracked interface p. 381
- 29.2 The corrective solution p. 383
- 29.3 The penny-shaped crack in tension p. 386
- 29.4 The contact solution p. 390
- 29.5 Implications for Fracture Mechanics p. 391
- 30 The Reciprocal Theorem p. 393
- 30.1 Maxwell's Theorem p. 393
- 30.2 Betti's Theorem p. 394
- 30.3 Use of the theorem p. 395
- 30.4 Thermoelastic problems p. 401
- A Using Maple and Mathematica p. 405
- Index p. 407
