

- Part 1 Introduction
 - Tru64 UNIX and TruCluster Overview
- Part 2 Design and Configuration of a Tru64 UNIX Cluster
 - Designing a Cluster
 - Technology Considerations for a Cluster
 - Cluster Configuration Planning
- Part 3 Installing and Configuring the Tru64 Operating System
 - Installing Tru64 UNIX
 - Configuring Tru64 UNIX
- Part 4 Cluster Hooks
 - File System Hierarchy, Context Dependent
 - Symbolic Links, Process IDs
 - Device Naming and Hardware Management
 - The Event Manager
 - Network Interface Failure Finder, NetRAIN, and Link Aggregation
- Part 5 Creating a Cluster
 - Planning the Cluster Implementation
 - Creating and Configuring a Single Node Cluster
 - Cluster Installation Verification
- Part 6 Adding and Removing Cluster Members
 - Planning for Adding a New Cluster Member
 - Adding and Configuring the New Cluster Member/Deleting a Cluster Member
 - Verifying the Configuration of a New Cluster Member
 - Cluster Hooks
- Part 7 Cluster Subsystems
 - Devices and File Systems
 - Communications
- Part 8 Cluster System Administration
 - System, Network, and Cluster Administration Tasks
 - Maintenance and Recovery
- Part 9 Application Deployment in a Cluster
 - Cluster Application Availability
 - Application Deployment Examples
- Part 10 Upgrading and Patching a Cluster
 - Performing a Rolling Patch or Upgrade
 - Considerations for Migrating to TruCluster Server
- Part 11 Appendices
 - Programming APIs
 - Resources
 - Glossary
