

- Foreword p. ix
- Foreword to the First Edition p. xi
- Preface p. xxvii
- 1 Introduction to Optical Networks p. 1
- 1.1 Telecommunications Network Architecture p. 3
- 1.2 Services, Circuit Switching, and Packet Switching p. 6
- 1.2.1 The Changing Services Landscape p. 9
- 1.3 Optical Networks p. 10
- 1.3.1 Multiplexing Techniques p. 12
- 1.3.2 Second-Generation Optical Networks p. 14
- 1.4 The Optical Layer p. 16
- 1.5 Transparency and All-Optical Networks p. 24
- 1.6 Optical Packet Switching p. 26
- 1.7 Transmission Basics p. 28
- 1.7.1 Wavelengths, Frequencies, and Channel Spacing p. 28
- 1.7.2 Wavelength Standards p. 30
- 1.7.3 Optical Power and Loss p. 31
- 1.8 Network Evolution p. 32
- 1.8.1 Early Days--Multimode Fiber p. 33
- 1.8.2 Single-Mode Fiber p. 35
- 1.8.3 Optical Amplifiers and WDM p. 37
- 1.8.4 Beyond Transmission Links to Networks p. 39
- I Technology p. 47
- 2 Propagation of Signals in Optical Fiber p. 49
- 2.1 Light Propagation in Optical Fiber p. 50
- 2.1.1 Geometrical Optics Approach p. 50
- 2.1.2 Wave Theory Approach p. 55
- 2.2 Loss and Bandwidth p. 65
- 2.2.1 Bending Loss p. 67
- 2.3 Chromatic Dispersion p. 68
- 2.3.1 Chirped Gaussian Pulses p. 69
- 2.3.2 Controlling the Dispersion Profile p. 74
- 2.4 Nonlinear Effects p. 76
- 2.4.1 Effective Length and Area p. 77
- 2.4.2 Stimulated Brillouin Scattering p. 79
- 2.4.3 Stimulated Raman Scattering p. 80
- 2.4.4 Propagation in a Nonlinear Medium p. 81
- 2.4.5 Self-Phase Modulation p. 83
- 2.4.6 SPM-Induced Chirp for Gaussian Pulses p. 87
- 2.4.7 Cross-Phase Modulation p. 89
- 2.4.8 Four-Wave Mixing p. 90
- 2.4.9 New Optical Fiber Types p. 93
- 2.5 Solitons p. 98
- 2.5.1 Dispersion-Managed Solitons p. 100
- 3 Components p. 107
- 3.1 Couplers p. 108

- 3.1.1 Principle of Operation p. 110
- 3.1.2 Conservation of Energy p. 111
- 3.2 Isolators and Circulators p. 112
- 3.2.1 Principle of Operation p. 113
- 3.3 Multiplexers and Filters p. 115
- 3.3.1 Gratings p. 118
- 3.3.2 Diffraction Pattern p. 122
- 3.3.3 Bragg Gratings p. 123
- 3.3.4 Fiber Gratings p. 126
- 3.3.5 Fabry-Perot Filters p. 130
- 3.3.6 Multilayer Dielectric Thin-Film Filters p. 133
- 3.3.7 Mach-Zehnder Interferometers p. 135
- 3.3.8 Arrayed Waveguide Grating p. 139
- 3.3.9 Acousto-Optic Tunable Filter p. 143
- 3.3.10 High Channel Count Multiplexer Architectures p. 148
- 3.4 Optical Amplifiers p. 151
- 3.4.1 Stimulated Emission p. 152
- 3.4.2 Spontaneous Emission p. 153
- 3.4.3 Erbium-Doped Fiber Amplifiers p. 154
- 3.4.4 Raman Amplifiers p. 159
- 3.4.5 Semiconductor Optical Amplifiers p. 161
- 3.4.6 Crosstalk in SOAs p. 165
- 3.5 Transmitters p. 165
- 3.5.1 Lasers p. 166
- 3.5.2 Light-Emitting Diodes p. 176
- 3.5.3 Tunable Lasers p. 178
- 3.5.4 Direct and External Modulation p. 186
- 3.5.5 Pump Sources for Raman Amplifiers p. 190
- 3.6 Detectors p. 192
- 3.6.1 Photodetectors p. 192
- 3.6.2 Front-End Amplifiers p. 197
- 3.7 Switches p. 199
- 3.7.1 Large Optical Switches p. 201
- 3.7.2 Optical Switch Technologies p. 207
- 3.7.3 Large Electronic Switches p. 215
- 3.8 Wavelength Converters p. 216
- 3.8.1 Optoelectronic Approach p. 217
- 3.8.2 Optical Gating p. 218
- 3.8.3 Interferometric Techniques p. 220
- 3.8.4 Wave Mixing p. 223
- 4 Modulation and Demodulation p. 239
- 4.1 Modulation p. 239
- 4.1.1 Signal Formats p. 240
- 4.2 Subcarrier Modulation and Multiplexing p. 242
- 4.2.1 Clipping and Intermodulation Products p. 243
- 4.2.2 Applications of SCM p. 245

- 4.3 Spectral Efficiency p. 245
- 4.3.1 Optical Duobinary Modulation p. 246
- 4.3.2 Optical Single Sideband Modulation p. 248
- 4.3.3 Multilevel Modulation p. 249
- 4.3.4 Capacity Limits of Optical Fiber p. 249
- 4.4 Demodulation p. 250
- 4.4.1 An Ideal Receiver p. 252
- 4.4.2 A Practical Direct Detection Receiver p. 253
- 4.4.3 Front-End Amplifier Noise p. 254
- 4.4.4 APD Noise p. 255
- 4.4.5 Optical Preamplifiers p. 255
- 4.4.6 Bit Error Rates p. 258
- 4.4.7 Coherent Detection p. 263
- 4.4.8 Timing Recovery p. 265
- 4.4.9 Equalization p. 266
- 4.5 Error Detection and Correction p. 267
- 4.5.1 Reed-Solomon Codes p. 270
- 4.5.2 Interleaving p. 271
- 5 Transmission System Engineering p. 283
- 5.1 System Model p. 283
- 5.2 Power Penalty p. 284
- 5.3 Transmitter p. 287
- 5.4 Receiver p. 288
- 5.5 Optical Amplifiers p. 289
- 5.5.1 Gain Saturation in EDFAs p. 290
- 5.5.2 Gain Equalization in EDFAs p. 292
- 5.5.3 Amplifier Cascades p. 293
- 5.5.4 Amplifier Spacing Penalty p. 294
- 5.5.5 Power Transients and Automatic Gain Control p. 296
- 5.5.6 Lasing Loops p. 298
- 5.6 Crosstalk p. 299
- 5.6.1 Intrachannel Crosstalk p. 299
- 5.6.2 Interchannel Crosstalk p. 301
- 5.6.3 Crosstalk in Networks p. 303
- 5.6.4 Bidirectional Systems p. 303
- 5.6.5 Crosstalk Reduction p. 305
- 5.6.6 Cascaded Filters p. 307
- 5.7 Dispersion p. 308
- 5.7.1 Chromatic Dispersion Limits: NRZ Modulation p. 309
- 5.7.2 Chromatic Dispersion Limits: RZ Modulation p. 311
- 5.7.3 Dispersion Compensation p. 314
- 5.7.4 Polarization-Mode Dispersion (PMD) p. 320
- 5.8 Fiber Nonlinearities p. 323
- 5.8.1 Effective Length in Amplified Systems p. 323
- 5.8.2 Stimulated Brillouin Scattering p. 325
- 5.8.3 Stimulated Raman Scattering p. 326

- 5.8.4 Four-Wave Mixing p. 329
- 5.8.5 Self-/Cross-Phase Modulation p. 333
- 5.8.6 Role of Chromatic Dispersion Management p. 335
- 5.9 Wavelength Stabilization p. 335
- 5.10 Design of Soliton Systems p. 336
- 5.11 Design of Dispersion-Managed Soliton Systems p. 338
- 5.12 Overall Design Considerations p. 341
- 5.12.1 Fiber Type p. 341
- 5.12.2 Transmit Power and Amplifier Spacing p. 342
- 5.12.3 Chromatic Dispersion Compensation p. 343
- 5.12.4 Modulation p. 343
- 5.12.5 Nonlinearities p. 344
- 5.12.6 Interchannel Spacing and Number of Wavelengths p. 344
- 5.12.7 All-Optical Networks p. 345
- 5.12.8 Wavelength Planning p. 346
- 5.12.9 Transparency p. 348
- II Networks p. 361
- 6 Client Layers of the Optical Layer p. 363
- 6.1 SONET/SDH p. 364
- 6.1.1 Multiplexing p. 367
- 6.1.2 SONET/SDH Layers p. 370
- 6.1.3 SONET Frame Structure p. 371
- 6.1.4 SONET/SDH Physical Layer p. 375
- 6.1.5 Elements of a SONET/SDH Infrastructure p. 378
- 6.2 ATM p. 381
- 6.2.1 Functions of ATM p. 382
- 6.2.2 Adaptation Layers p. 385
- 6.2.3 Quality of Service p. 386
- 6.2.4 Flow Control p. 387
- 6.2.5 Signaling and Routing p. 387
- 6.3 IP p. 388
- 6.3.1 Routing and Forwarding p. 390
- 6.3.2 Quality of Service p. 392
- 6.3.3 Multiprotocol Label Switching (MPLS) p. 392
- 6.3.4 Whither ATM? p. 394
- 6.4 Storage-Area Networks p. 395
- 6.4.1 ESCON p. 396
- 6.4.2 Fibre Channel p. 397
- 6.4.3 HIPPI p. 397
- 6.5 Gigabit and 10-Gigabit Ethernet p. 398
- 7 WDM Network Elements p. 403
- 7.1 Optical Line Terminals p. 406
- 7.2 Optical Line Amplifiers p. 408
- 7.3 Optical Add/Drop Multiplexers p. 408
- 7.3.1 OADM Architectures p. 411
- 7.3.2 Reconfigurable OADMs p. 417

- 7.4 Optical Crossconnects p. 419
- 7.4.1 All-Optical OXC Configurations p. 425
- 8 WDM Network Design p. 437
- 8.1 Cost Trade-Offs: A Detailed Ring Network Example p. 441
- 8.2 LTD and RWA Problems p. 448
- 8.2.1 Lightpath Topology Design p. 449
- 8.2.2 Routing and Wavelength Assignment p. 454
- 8.2.3 Wavelength Conversion p. 457
- 8.2.4 Relationship to Graph Coloring p. 461
- 8.3 Dimensioning Wavelength-Routing Networks p. 462
- 8.4 Statistical Dimensioning Models p. 464
- 8.4.1 First-Passage Model p. 466
- 8.4.2 Blocking Model p. 467
- 8.5 Maximum Load Dimensioning Models p. 475
- 8.5.1 Offline Lightpath Requests p. 475
- 8.5.2 Online RWA in Rings p. 481
- 9 Control and Management p. 495
- 9.1 Network Management Functions p. 495
- 9.1.1 Management Framework p. 497
- 9.1.2 Information Model p. 499
- 9.1.3 Management Protocols p. 500
- 9.2 Optical Layer Services and Interfacing p. 502
- 9.3 Layers within the Optical Layer p. 504
- 9.4 Multivendor Interoperability p. 505
- 9.5 Performance and Fault Management p. 507
- 9.5.1 The Impact of Transparency p. 508
- 9.5.2 BER Measurement p. 509
- 9.5.3 Optical Trace p. 509
- 9.5.4 Alarm Management p. 510
- 9.5.5 Data Communication Network (DCN) and Signaling p. 512
- 9.5.6 Policing p. 513
- 9.5.7 Optical Layer Overhead p. 514
- 9.6 Configuration Management p. 519
- 9.6.1 Equipment Management p. 519
- 9.6.2 Connection Management p. 520
- 9.6.3 Adaptation Management p. 524
- 9.7 Optical Safety p. 526
- 9.7.1 Open Fiber Control Protocol p. 528
- 10 Network Survivability p. 537
- 10.1 Basic Concepts p. 539
- 10.2 Protection in SONET/SDH p. 542
- 10.2.1 Point-to-Point Links p. 544
- 10.2.2 Self-Healing Rings p. 546
- 10.2.3 Unidirectional Path-Switched Rings p. 549
- 10.2.4 Bidirectional Line-Switched Rings p. 550
- 10.2.5 Ring Interconnection and Dual Homing p. 555

- 10.3 Protection in IP Networks p. 558
- 10.4 Why Optical Layer Protection p. 560
- 10.4.1 Service Classes Based on Protection p. 566
- 10.5 Optical Layer Protection Schemes p. 567
- 10.5.1 1 + 1 OMS Protection p. 570
- 10.5.2 1:1 OMS Protection p. 571
- 10.5.3 OMS-DPRing p. 571
- 10.5.4 OMS-SPRing p. 571
- 10.5.5 1:N Transponder Protection p. 573
- 10.5.6 1 + 1 OCh Dedicated Protection p. 574
- 10.5.7 OCh-SPRing p. 575
- 10.5.8 OCh-Mesh Protection p. 576
- 10.5.9 Choice of Protection Technique p. 582
- 10.6 Interworking between Layers p. 582
- 11 Access Networks p. 591
- 11.1 Network Architecture Overview p. 593
- 11.2 Enhanced HFC p. 598
- 11.3 Fiber to the Curb (FTTC) p. 599
- 11.3.1 PON Evolution p. 609
- 12 Photonic Packet Switching p. 615
- 12.1 Optical Time Division Multiplexing p. 619
- 12.1.1 Bit Interleaving p. 620
- 12.1.2 Packet Interleaving p. 623
- 12.1.3 Optical AND Gates p. 625
- 12.2 Synchronization p. 631
- 12.2.1 Tunable Delays p. 632
- 12.2.2 Optical Phase Lock Loop p. 633
- 12.3 Header Processing p. 634
- 12.4 Buffering p. 635
- 12.4.1 Output Buffering p. 637
- 12.4.2 Input Buffering p. 639
- 12.4.3 Recirculation Buffering p. 639
- 12.4.4 Using Wavelengths for Contention Resolution p. 641
- 12.4.5 Deflection Routing p. 645
- 12.5 Burst Switching p. 649
- 12.6 Testbeds p. 650
- 12.6.1 KEOPS p. 650
- 12.6.2 NTT's Optical ATM Switches p. 652
- 12.6.3 BT Labs Testbeds p. 654
- 12.6.4 Princeton University Testbed p. 654
- 12.6.5 AON p. 655
- 12.6.6 CORD p. 656
- 13 Deployment Considerations p. 667
- 13.1 The Evolving Telecommunications Network p. 667
- 13.1.1 The SONET/SDH Core Network p. 669
- 13.1.2 Architectural Choices for Next-Generation Transport Networks p. 673

- 13.2 Designing the Transmission Layer p. 681
- 13.2.1 Using SDM p. 682
- 13.2.2 Using TDM p. 683
- 13.2.3 Using WDM p. 684
- 13.2.4 Unidirectional versus Bidirectional WDM Systems p. 686
- 13.2.5 Long-Haul Networks p. 688
- 13.2.6 Long-Haul Network Case Study p. 689
- 13.2.7 Long-Haul Undersea Networks p. 697
- 13.2.8 Metro Networks p. 698
- 13.2.9 Metro Ring Case Study p. 700
- 13.2.10 From Opaque Links to Agile All-Optical Networks p. 704
- A Acronyms p. 711
- B Symbols and Parameters p. 717
- C Standards p. 721
- C.1 International Telecommunications Union (ITU-T) p. 721
- C.1.1 Fiber p. 721
- C.1.2 SDH (Synchronous Digital Hierarchy) p. 721
- C.1.3 Optical Networking p. 722
- C.1.4 Management p. 722
- C.2 Telcordia p. 723
- C.2.1 Physical and Environmental p. 723
- C.2.2 SONET p. 723
- C.2.3 Optical Networking p. 724
- C.3 American National Standards Institute (ANSI) p. 724
- C.3.1 SONET p. 724
- C.3.2 ESCON and Fibre Channel p. 724
- D Wave Equations p. 727
- E Pulse Propagation in Optical Fiber p. 731
- E.1 Propagation of Chirped Gaussian Pulses p. 734
- E.2 Nonlinear Effects on Pulse Propagation p. 735
- E.3 Soliton Pulse Propagation p. 738
- F Nonlinear Polarization p. 741
- G Multilayer Thin-Film Filters p. 743
- G.1 Wave Propagation at Dielectric Interfaces p. 743
- G.2 Filter Design p. 747
- H Random Variables and Processes p. 751
- H.1 Random Variables p. 751
- H.1.1 Gaussian Distribution p. 752
- H.1.2 Maxwell Distribution p. 753
- H.1.3 Poisson Distribution p. 753
- H.2 Random Processes p. 754
- H.2.1 Poisson Random Process p. 755
- H.2.2 Gaussian Random Process p. 756
- I Receiver Noise Statistics p. 757
- 1.1 Shot Noise p. 759
- 1.2 Amplifier Noise p. 760

- Bibliography p. 763
- Index p. 797
