

- Preface p. xiii
- 1 Introduction and Definition of Terms p. 1
  - 1.1 Introduction p. 1
  - 1.2 The Concept of State p. 1
  - 1.3 Simple Equilibrium p. 4
  - 1.4 The Equation of State of an Ideal Gas p. 5
  - 1.5 The Units of Energy and Work p. 8
  - 1.6 Extensive and Intensive Properties p. 8
  - 1.7 Phase Diagrams and Thermodynamic Components p. 9
- 2 The First Law of Thermodynamics p. 15
  - 2.1 Introduction p. 15
  - 2.2 The Relationship between Heat and Work p. 16
  - 2.3 Internal Energy and the First Law of Thermodynamics p. 17
  - 2.4 Constant-Volume Processes p. 21
  - 2.5 Constant-Pressure Processes and the Enthalpy  $H$  p. 21
  - 2.6 Heat Capacity p. 21
  - 2.7 Reversible Adiabatic Processes p. 25
  - 2.8 Reversible Isothermal Pressure or Volume Changes of an Ideal Gas p. 27
  - 2.9 Summary p. 28
  - 2.10 Numerical Examples p. 29
  - Problems p. 34
- 3 The Second Law of Thermodynamics p. 37
  - 3.1 Introduction p. 37
  - 3.2 Spontaneous or Natural Processes p. 38
  - 3.3 Entropy and the Quantification of Irreversibility p. 39
  - 3.4 Reversible Processes p. 40
  - 3.5 An Illustration of Irreversible and Reversible Processes p. 41
  - 3.6 Entropy and Reversible Heat p. 43
  - 3.7 The Reversible Isothermal Compression of an Ideal Gas p. 46
  - 3.8 The Reversible Adiabatic Expansion of an Ideal Gas p. 47
  - 3.9 Summary Statements p. 48
  - 3.10 The Properties of Heat Engines p. 48
  - 3.11 The Thermodynamic Temperature Scale p. 51
  - 3.12 The Second Law of Thermodynamics p. 53
  - 3.13 Maximum Work p. 55
  - 3.14 Entropy and the Criterion for Equilibrium p. 57
  - 3.15 The Combined Statement of the First and Second Laws of Thermodynamics p. 58
  - 3.16 Summary p. 59
  - 3.17 Numerical Examples p. 61
  - Problems p. 66
- 4 The Statistical Interpretation of Entropy p. 69
  - 4.1 Introduction p. 69
  - 4.2 Entropy and Disorder on an Atomic Scale p. 70
  - 4.3 The Concept of Microstate p. 71

- 4.4 Determination of the Most Probable Microstate p. 72
- 4.5 The Influence of Temperature p. 76
- 4.6 Thermal Equilibrium and the Boltzmann Equation p. 78
- 4.7 Heat Flow and the Production of Entropy p. 79
- 4.8 Configurational Entropy and Thermal Entropy p. 80
- 4.9 Summary p. 83
- 4.10 Numerical Examples p. 84
- Problems p. 86
- 5 Auxiliary Functions p. 87
- 5.1 Introduction p. 87
- 5.2 The Enthalpy  $H$  p. 89
- 5.3 The Helmholtz Free Energy  $A$  p. 89
- 5.4 The Gibbs Free Energy  $G$  p. 94
- 5.5 Summary of the Equations for a Closed System p. 95
- 5.6 The Variation of the Composition and Size of the System p. 96
- 5.7 The Chemical Potential p. 97
- 5.8 Thermodynamic Relations p. 98
- 5.9 Maxwell's Equations p. 99
- 5.10 The Upstairs-Downstairs-Inside-Out Formula p. 101
- 5.11 The Gibbs-Helmholtz Equation p. 102
- 5.12 Summary p. 103
- 5.13 Example of the Use of the Thermodynamic Relations p. 104
- Problems p. 106
- 6 Heat Capacity, Enthalpy, Entropy, and the Third Law of Thermodynamics p. 109
- 6.1 Introduction p. 109
- 6.2 Theoretical Calculation of the Heat Capacity p. 110
- 6.3 The Empirical Representation of Heat Capacities p. 115
- 6.4 Enthalpy as a Function of Temperature and Composition p. 116
- 6.5 The Dependence of Entropy on Temperature and the Third Law of Thermodynamics p. 125
- 6.6 Experimental Verification of the Third Law p. 128
- 6.7 The Influence of Pressure on Enthalpy and Entropy p. 134
- 6.8 Summary p. 136
- 6.9 Numerical Examples p. 137
- Problems p. 147
- 7 Phase Equilibrium in a One-Component System p. 149
- 7.1 Introduction p. 149
- 7.2 The Variation of Gibbs Free Energy with Temperature at Constant Pressure p. 150
- 7.3 The Variation of Gibbs Free Energy with Pressure at Constant Temperature p. 157
- 7.4 Gibbs Free Energy as a Function of Temperature and Pressure p. 159
- 7.5 Equilibrium between the Vapor Phase and a Condensed Phase p. 160
- 7.6 Graphical Representation of Phase Equilibria in a One-Component System p. 162
- 7.7 Solid-Solid Equilibria p. 168
- 7.8 Summary p. 171

- Numerical Examples p. 172
- Problems p. 175
- 8 The Behavior of Gases p. 177
  - 8.1 Introduction p. 177
  - 8.2 The P-V-T Relationships of Gases p. 177
  - 8.3 Deviations from Ideality and Equations of State for Real Gases p. 180
  - 8.4 The van der Waals Gas p. 182
  - 8.5 Other Equations of State for Nonideal Gases p. 191
  - 8.6 The Thermodynamic Properties of Ideal Gases and Mixtures of Ideal Gases p. 192
  - 8.7 The Thermodynamic Treatment of Nonideal Gases p. 198
  - 8.8 Summary p. 204
  - 8.9 Numerical Examples p. 206
    - Problems p. 208
- 9 The Behavior of Solutions p. 211
  - 9.1 Introduction p. 211
  - 9.2 Raoult's Law and Henry's Law p. 211
  - 9.3 The Thermodynamic Activity of a Component in Solution p. 215
  - 9.4 The Gibbs-Duhem Equation p. 216
  - 9.5 The Gibbs Free Energy of Formation of a Solution p. 218
  - 9.6 The Properties of Raoultian Ideal Solutions p. 221
  - 9.7 Nonideal Solutions p. 226
  - 9.8 Application of the Gibbs-Duhem Relation to the Determination of Activity p. 229
  - 9.9 Regular Solutions p. 240
  - 9.10 A Statistical Model of Solutions p. 245
  - 9.11 Subregular Solutions p. 252
  - 9.12 Summary p. 254
  - 9.13 Numerical Examples p. 257
    - Problems p. 259
- 10 Gibbs Free Energy Composition and Phase Diagrams of Binary Systems p. 263
  - 10.1 Introduction p. 263
  - 10.2 Gibbs Free Energy and Thermodynamic Activity p. 264
  - 10.3 The Gibbs Free Energy of Formation of Regular Solutions p. 266
  - 10.4 Criteria for Phase Stability in Regular Solutions p. 268
  - 10.5 Liquid and Solid Standard States p. 273
  - 10.6 Phase Diagrams, Gibbs Free Energy, and Thermodynamic Activity p. 283
  - 10.7 The Phase Diagrams of Binary Systems That Exhibit Regular Solution Behavior in the Liquid and Solid States p. 292
  - 10.8 Summary p. 298
  - 10.9 Numerical Example p. 299
    - Problems p. 301
- 11 Reactions Involving Gases p. 305
  - 11.1 Introduction p. 305
  - 11.2 Reaction Equilibrium in a Gas Mixture and the Equilibrium Constant p. 306
  - 11.3 The Effect of Temperature on the Equilibrium Constant p. 311

- 11.4 The Effect of Pressure on the Equilibrium Constant p. 312
- 11.5 Reaction Equilibrium as a Compromise between Enthalpy and Entropy p. 314
- 11.6 Reaction Equilibrium in the System  $\text{SO}_2(\text{g})$ - $\text{SO}_3(\text{g})$ - $\text{O}_2(\text{g})$  p. 316
- 11.7 Equilibrium in  $\text{H}_2\text{O}$ - $\text{H}_2$  and  $\text{CO}_2$ - $\text{CO}$  Mixtures p. 321
- 11.8 Summary p. 323
- 11.9 Numerical Examples p. 324
- Problems p. 335
- 12 Reactions Involving Pure Condensed Phases and a Gaseous Phase p. 337
- 12.1 Introduction p. 337
- 12.2 Reaction Equilibrium in a System Containing Pure Condensed Phases and a Gas Phase p. 338
- 12.3 The Variation of the Standard Gibbs Free Energy Change with Temperature p. 343
- 12.4 Ellingham Diagrams p. 346
- 12.5 The Effect of Phase Transformations p. 353
- 12.6 The Oxides of Carbon p. 358
- 12.7 Graphical Representation of Equilibria in the System Metal-Carbon-Oxygen p. 365
- 12.8 Summary p. 368
- 12.9 Numerical Examples p. 369
- Problems p. 380
- 13 Reaction Equilibria in Systems Containing Components in Condensed Solution p. 383
- 13.1 Introduction p. 383
- 13.2 The Criteria for Reaction Equilibrium in Systems Containing Components in Condensed Solution p. 385
- 13.3 Alternative Standard States p. 393
- 13.4 The Gibbs Phase Rule p. 399
- 13.5 Binary Systems Containing Compounds p. 417
- 13.6 Graphical Representation of Phase Equilibria p. 429
- 13.7 The Formation of Oxide Phases of Variable Composition p. 437
- 13.8 The Solubility of Gases in Metals p. 446
- 13.9 Solutions Containing Several Dilute Solutes p. 450
- 13.10 Summary p. 460
- 13.11 Numerical Examples p. 462
- Problems p. 470
- 14 Phase Diagrams for Binary Systems in Pressure-Temperature-Composition Space p. 475
- 14.1 Introduction p. 475
- 14.2 A Binary System Exhibiting Complete Mutual Solubility of the Components in the Solid and Liquid States p. 475
- 14.3 A Binary System Exhibiting Complete Mutual Solubility in the Solid and Liquid States and Showing Minima on the Melting, Boiling, and Sublimation Curves p. 480
- 14.4 A Binary System Containing a Eutectic Equilibrium and Having Complete Mutual Solubility in the Liquid p. 485
- 14.5 A Binary System Containing a Peritectic Equilibrium and Having Complete Mutual Solubility in the Liquid State p. 493

- 14.6 Phase Equilibrium in a Binary System Containing an Intermediate  $[\gamma]$  Phase That Melts, Sublimes, and Boils Congruently p. 501
- 14.7 Phase Equilibrium in a Binary System Containing an Intermediate  $[\gamma]$  Phase That Melts and Sublimes Congruently and Boils Incongruently p. 508
- 14.8 Phase Equilibrium in a Binary System with a Eutectic and One Component That Exhibits Allotropy p. 513
- 14.9 A Binary Eutectic System in Which Both Components Exhibit Allotropy p. 517
- 14.10 Phase Equilibrium at Low Pressure: The Cadmium-Zinc System p. 524
- 14.11 Phase Equilibrium at High Pressure: The  $\text{Na}_2\text{O} \cdot \text{Al}_2\text{O}_3 \cdot 2\text{SiO}_2$ - $\text{SiO}_2$  System p. 525
- 14.12 Summary p. 531
- 15 Electrochemistry p. 533
- 15.1 Introduction p. 533
- 15.2 The Relationship between Chemical and Electrical Driving Forces p. 535
- 15.3 The Effect of Concentration on EMF p. 540
- 15.4 Formation Cells p. 541
- 15.5 Concentration Cells p. 544
- 15.6 The Temperature Coefficient of the EMF p. 549
- 15.7 Heat Effects p. 551
- 15.8 The Thermodynamics of Aqueous Solutions p. 552
- 15.9 The Gibbs Free Energy of Formation of Ions and Standard Reduction Potentials p. 555
- 15.10 Pourbaix Diagrams p. 564
- 15.11 Summary p. 574
- 15.12 Numerical Examples p. 576
- Problems p. 579
- Appendices
- A Selected Thermodynamic and Thermochemical Data p. 581
- B Exact Differential Equations p. 589
- C The Generation of Auxiliary Functions as Legendre Transformations p. 591
- Nomenclature p. 599
- Answers p. 603
- Index p. 615
