

- Chapter 1 Introduction p. 1
- 1.1 Introduction p. 1
- 1.2 Availability of Water on Earth and Water Use p. 4
- 1.3 Water Resources Systems: Basic Concepts p. 4
- 1.4 System Definition and Properties p. 6
- 1.5 Hydrologic Systems and Modeling Approaches p. 9
- 1.5.1 Hydrologic Cycle p. 9
- 1.5.2 Hydrologic Variables and Parameters p. 11
- 1.6 Conflict Issues in Water Resources Planning and Management p. 12
- 1.7 Decision Tools in Water Resources Management p. 13
- References p. 19
- Chapter 2 Decision Making: Optimization and Conflict Resolution p. 21
- 2.1 Introduction p. 21
- 2.2 Single-Criterion Optimization p. 22
- 2.3 Multiple-Criteria Optimization p. 30
- 2.3.1 Sequential Optimization p. 35
- 2.3.2 The [varepsilon]-Constraint Method p. 36
- 2.3.3 The Weighting Method p. 36
- 2.3.4 Direction-Based Method p. 41
- 2.3.5 Distance-Based Methods p. 44
- 2.4 Group Decision Making p. 48
- 2.5 Conflict Resolution p. 52
- 2.6 Special Methodology p. 55
- 2.6.1 Dynamic Programming p. 55
- 2.6.2 Genetic Algorithms p. 60
- 2.7 Problems p. 63
- References p. 66
- Chapter 3 Decision Making under Uncertainty p. 67
- 3.1 Introduction p. 67
- 3.2 Probabilistic Methods p. 67
- 3.2.1 Random Variables p. 67
- 3.2.2 Central Tendencies and Variances p. 75
- 3.2.3 Joint Distributions p. 79
- 3.3 Simulation Models p. 82
- 3.3.1 Neural Networks p. 82
- 3.3.2 Observers p. 84
- 3.3.3 Stochastic Simulation p. 86
- 3.4 Measures of Reliability p. 89
- 3.5 Stochastic Processes p. 95
- 3.6 Markov Chains p. 96
- 3.7 Optimization under Uncertainty p. 100
- 3.7.1 Chance-Constrained Programming p. 101
- 3.7.2 Stochastic Dynamic Programming p. 102
- 3.8 Risk, Uncertainty, and Bayesian Decision Theory p. 103
- 3.8.1 Risk and Value of Information p. 104
- 3.8.2 Bayesian Decision Making p. 105

- 3.8.3 Conjugate Distribution Families p. 106
- 3.9 Fuzzy Sets and Parameter Imprecision p. 108
- 3.10 Problems p. 112
- References p. 115
- Chapter 4 Water Resources Economics p. 117
- 4.1 Introduction p. 117
- 4.2 Benefits and Costs p. 117
- 4.3 Money-Time Relationship p. 119
- 4.3.1 Future Value and Present Value of Money p. 120
- 4.3.2 Future Value of Money and End-of-Period Cash Flows p. 121
- 4.3.3 Present Value of Money and End-of-Period Cash Flows p. 121
- 4.3.4 Future Value of Money and End-of-Period Uniform Gradient Cash Flows p. 122
- 4.3.5 Present Value of Money and End-of-Period Uniform Gradient Cash Flows p. 122
- 4.3.6 End-of-Period Cash Flows and End-of-Period Uniform Gradient Cash Flows p. 123
- 4.4 Economic Analysis of Multiple Alternatives p. 126
- 4.4.1 Present Worth Method p. 126
- 4.4.2 Future Worth Method p. 128
- 4.4.3 Annual Worth Method p. 129
- 4.4.4 The Internal Rate of Return (IRR) Method p. 129
- 4.4.5 The External Rate of Return Method p. 130
- 4.4.6 Comparing Alternatives Using the Rate of Return Method p. 131
- 4.5 Economic Evaluation of Projects Using the Benefit-Cost Ratio Method p. 132
- 4.6 Public vs. Private Projects and Goods p. 135
- 4.7 Economic Models p. 136
- 4.7.1 Production Functions p. 136
- 4.7.2 Resource-Supply Functions p. 137
- 4.7.3 Demand Functions p. 137
- 4.8 Efficiency and Equity in Economic Analysis p. 138
- 4.9 Problems p. 141
- References p. 143
- Chapter 5 Time Series Analysis p. 145
- 5.1 Introduction p. 145
- 5.2 Stochastic Processes p. 145
- 5.3 Hydrologic Time Series Modeling: Basic Steps p. 147
- 5.4 Data Preparation p. 147
- 5.5 Methods of Parameter Estimation p. 152
- 5.6 Goodness of Fit Tests p. 155
- 5.5.1 Method of Moments p. 152
- 5.5.2 Method of Least Squares p. 153
- 5.5.3 Method of Maximum Likelihood p. 154
- 5.6.1 Chi-Square Goodness of Fit Test p. 155
- 5.6.2 Kolmogorov-Smirnov Goodness of Fit Test p. 157
- 5.6.3 Tests of Normality p. 158
- 5.6.4 Tests of Independence in Time p. 161
- 5.7 Akaike's Information Criterion (AIC) p. 166

- 5.8 Data Generation and Forecasting p. 167
- 5.9 Autoregressive Modeling p. 167
- 5.10 Moving Average Process p. 171
- 5.11 Autoregressive Moving Average Modeling p. 172
- 5.11.1 Data Generation and Forecasting Using ARMA Models p. 173
- 5.12 Autoregressive Integrated Moving Average (ARIMA) Modeling p. 173
- 5.12.1 Time Series Forecasting Using ARIMA Models p. 175
- 5.13 Multivariate and Disaggregation Modeling of Time Series p. 175
- 5.13.1 Multivariate Modeling p. 175
- 5.13.2 Disaggregation Modeling p. 179
- 5.14 Problems p. 181
- References p. 183
- Appendix A p. 185
- Appendix B p. 187
- Chapter 6 River Basin Modeling p. 191
- 6.1 Introduction p. 191
- 6.2 Watershed: Definition and Characteristics p. 191
- 6.3 Watershed Geomorphology p. 191
- 6.3.1 Drainage Area p. 191
- 6.3.2 Watershed Length p. 193
- 6.3.3 Watershed Slope p. 193
- 6.3.4 Watershed Shape p. 193
- 6.4 Soil Characteristics p. 195
- 6.4.1 Soil Texture p. 195
- 6.4.2 Soil Structure p. 195
- 6.4.3 Soil Moisture p. 195
- 6.5 Data Requirements p. 196
- 6.5.1 Hydrologic and Climatologic Data p. 196
- 6.5.2 Physical Characteristics p. 197
- 6.5.3 Hydrologic Characteristics p. 198
- 6.5.4 Inflow and Outflow p. 200
- 6.5.5 Demand Points p. 200
- 6.5.6 Control Points p. 201
- 6.5.7 Critical Points p. 201
- 6.5.8 Water Quality Requirements for Various Uses p. 201
- 6.5.9 Return Flows and Drainage p. 201
- 6.5.10 Sampling Network p. 202
- 6.6 Objectives p. 202
- 6.6.1 Water Supply p. 202
- 6.6.2 Flood Control p. 204
- 6.6.2.1 Flood Control Alternatives p. 205
- 6.7 Management Tools p. 207
- 6.7.1 Streamflow and Excess Water Estimation p. 207
- 6.7.1.4 Infiltration Estimation: Green-Ampt Method p. 211
- 6.7.1.1 Streamflow Estimation in Homogenous Basins p. 207
- 6.7.1.2 Unit Hydrograph As a Tool p. 209

- 6.7.1.3 Potential Evapotranspiration Estimation: Thornthwaite Method p. 210
- 6.7.2 Simulation Models p. 212
- 6.7.2.1 Hydrologic Simulation Models p. 212
- 6.7.2.2 Object-Oriented Simulation Models p. 224
- 6.7.3 Optimization Models p. 226
- 6.7.3.1 Water Allocation in Multi-User Systems p. 226
- 6.7.3.2 River Quality Management p. 228
- 6.7.3.3 Calibration of Hydrologic Simulation Models p. 229
- 6.8 Conflict Issues in River Systems p. 229
- 6.9 Problems p. 232
- References p. 235
- Chapter 7 Groundwater Management p. 239
- 7.1 Introduction p. 239
- 7.2 Characteristics of Groundwater Systems p. 239
- 7.2.1 Hydraulic Properties of Soils and Groundwater p. 239
- 7.3 Groundwater Flow Equations p. 243
- 7.3.1 The Continuity Equation p. 243
- 7.3.2 Equation of Motion in Groundwater p. 246
- 7.3.3 The Groundwater Flow Equation p. 248
- 7.4 Groundwater Modeling p. 250
- 7.4.1 The Flow Net p. 250
- 7.4.2 Numerical Methods p. 252
- 7.4.2.1 Finite-Difference Numerical Model Basics p. 253
- 7.4.2.2 Finite-Element Methods p. 263
- 7.4.2.3 Grid Design p. 269
- 7.4.2.4 Parameter Estimation and Model Calibration p. 269
- 7.4.2.5 Model Verification p. 270
- 7.4.2.6 Predictions and Post Audits p. 270
- 7.5 Management Tools p. 271
- 7.5.1 Groundwater Simulation Models p. 271
- 7.5.1.1 Graphic Groundwater p. 271
- 7.5.1.2 MODFLOW p. 271
- 7.5.2 Safe Yield Estimation p. 272
- 7.5.3 Optimization Models for Groundwater Management p. 272
- 7.5.3.1 Optimization Model for Groundwater Operation p. 273
- 7.5.3.2 Optimization Model for Capacity Expansion p. 274
- 7.5.3.3 Optimization Model for Water Allocation p. 276
- 7.5.3.4 Optimization Model for Conjunctive Water Use p. 277
- 7.6 Conflict Issues in Groundwater Systems p. 284
- 7.7 Problems p. 290
