

- Preface p. ix
- Acknowledgments p. xi
- 1 Smart Antennas p. 1
 - 1.1 Introduction p. 1
 - 1.2 Tracking Radio Sources p. 5
 - 1.2.1 Beamwidth p. 8
 - 1.2.2 Main Beam Scanning p. 8
 - 1.2.3 Multiple Beam Scanning p. 12
 - 1.2.4 Signal Identification Time p. 13
 - 1.2.5 Computation Time of the Controller p. 14
 - 1.3 Antenna Control Systems p. 14
 - 1.3.1 One-Dimensional Tracking p. 16
 - 1.3.2 Two-Dimensional Tracking p. 17
 - 1.4 Summary p. 20
 - References p. 21
- 2 Wire Antenna Theory p. 23
 - 2.1 Introduction p. 23
 - 2.2 Basic Radiation Theory p. 26
 - 2.3 Radiation from a Wire Element p. 28
 - 2.3.1 Hertzian Dipole p. 30
 - 2.3.2 Short Dipole with Uniform Current p. 31
 - 2.3.3 Dipole with Sinusoidal Current Distribution p. 32
 - 2.3.4 Dipole with Linear Current Distribution p. 33
 - 2.3.5 Impedance of Wire Antennas p. 35
 - 2.4 Mutual Coupling Between Wire Elements p. 37
 - 2.4.1 Side-by-Side Configuration p. 41
 - 2.4.2 Collinear Configuration p. 44
 - 2.5 Bandwidth of Wire Antennas p. 44
 - 2.6 Wire Antennas Above a Finite Ground Plane p. 46
 - 2.7 Simple Switched-Parasitic Antennas p. 52
 - 2.7.1 Switched Active Antennas p. 52
 - 2.7.2 Switched Parasitic Antennas p. 55
 - 2.8 Wire Element Phased Arrays p. 59
 - 2.9 Dual-Band Wire Antennas p. 64
 - 2.10 Dual-Band Switched Parasitic Wire Antennas p. 71
 - 2.11 Yagi-Uda Wire Antennas p. 73
 - 2.12 Summary p. 75
 - References p. 76
- 3 Patch Antennas p. 79
 - 3.1 Radiation from a Patch Antenna p. 79
 - 3.2 Mutual Coupling Between Patch Elements p. 96
 - 3.3 Patch Antenna Phased Arrays p. 106
 - 3.4 Stacked Patch Antennas p. 107
 - 3.5 Switched Parasitic Patch Antennas p. 111

- 3.5.1 Switched Active Patch Arrays p. 114
- 3.5.2 Switched Parasitic Patch Arrays p. 115
- 3.5.3 Circularly Polarized Switched Parasitic Patch Arrays p. 119
- 3.6 Summary p. 122
- References p. 125
- 4 Design Examples of Switched Parasitic Antennas p. 127
- 4.1 Introduction p. 127
- 4.2 Historical Survey p. 128
- 4.2.1 Wire Arrays p. 128
- 4.2.2 Microstrip Arrays p. 140
- 4.3 Switched Parasitic and Switched Active Wire Arrays p. 144
- 4.3.1 Four-Element SASPA p. 144
- 4.3.2 Five-Element FASPA p. 149
- 4.4 Multibeam Wire Array p. 152
- 4.5 Switched Parasitic Patch Antennas p. 161
- 4.6 Dielectric Coated and Dielectric Resonator Antennas p. 166
- 4.6.1 Dielectric Coated Wire Antennas p. 171
- 4.6.2 Dielectric Resonator Antennas p. 176
- 4.7 Tin-Can Antenna p. 178
- 4.8 Parabolic-Antenna Beam Steering p. 180
- 4.9 Summary p. 184
- References p. 184
- 5 Antenna Optimization p. 189
- 5.1 Introduction to Optimization Methods p. 189
- 5.1.1 Cost Function p. 192
- 5.1.2 Computational Techniques p. 194
- 5.1.3 Sensitivity Analysis p. 195
- 5.1.4 Example: The Three-Element Reflector Antenna p. 196
- 5.2 Sequential Uniform Sampling p. 199
- 5.3 The Monte Carlo Method p. 204
- 5.4 The Simplex Method p. 208
- 5.5 The Gradient Method p. 211
- 5.6 Genetic Algorithm p. 215
- 5.7 Simulated Annealing p. 221
- 5.8 Summary p. 223
- References p. 228
- 6 Performance Limitations p. 231
- 6.1 Introduction p. 231
- 6.2 Beamwidth Limits p. 231
- 6.3 Antenna Losses p. 233
- 6.3.1 Conductor Losses p. 233
- 6.3.2 Dielectric Losses p. 234
- 6.3.3 Other Losses p. 236
- 6.4 Switching Circuits for Switched Parasitic Antennas p. 237

- 6.4.1 FASPA Switches p. 237
- 6.4.2 SASPA Switches p. 240
- 6.5 New Technologies and New Applications p. 241
- 6.5.1 MEMs RF Switches p. 241
- 6.5.2 Superconductor Technology p. 243
- 6.5.3 Smart Materials and MEMs Antennas p. 244
- 6.6 Conclusions p. 244
- References p. 245
- About the Authors p. 247
- Index p. 249
