

- Foreword p. xv
- Preface p. xix
- Acknowledgments p. xxiii
- 1 Introduction p. 1
- 1.1 The Importance of IP and WDM Networks p. 1
- 1.1.1 Historical Perspective p. 1
- 1.1.2 Current Trends p. 1
- 1.1.3 Deployment of IP Over WDM p. 2
- 1.2 Structure of the Book p. 3
- Appendix 1A The Context of the WINMAN Project p. 4
- Appendix 1B The WINMAN Consortium p. 5
- 2 Network and Service Evolution Scenarios p. 7
- 2.1 Introduction p. 7
- 2.2 Requirements of IP-Based Services p. 8
- 2.2.1 VPNs p. 9
- 2.2.2 Application-Oriented Services: VoIP and MoIP p. 11
- 2.3 Current Transport Networks p. 15
- 2.4 Trends in Network Architectures p. 17
- 2.4.1 OTN p. 17
- 2.4.2 I2 p. 20
- 2.4.3 Next Generation Internet p. 22
- 2.5 Business Drivers for Management Systems p. 23
- 2.5.1 SDH and ATM Management Systems p. 23
- 2.5.2 WDM Management p. 24
- 2.5.3 IP Management Systems p. 24
- 2.5.4 The Market Perspective p. 25
- 2.6 Summary p. 27
- References p. 29
- 3 Management of the IP Network Layer p. 31
- 3.1 Introduction p. 31
- 3.2 The IP/MPLS Network Model p. 32
- 3.2.1 MPLS-Based Applications p. 34
- 3.3 Management of IP Networks p. 37
- 3.3.1 Performance Management p. 37
- 3.3.2 Fault Management p. 38
- 3.3.3 SNMP Management of IP/MPLS Network Connectivity p. 38
- 3.3.4 Management of MPLS VPNs p. 43
- 3.4 Policy-Based Management p. 43
- 3.5 IP/MPLS Management Tools p. 44
- 3.5.1 SNMP-Based Tools p. 45
- 3.5.2 SNMP APIs p. 46
- 3.5.3 PBNM Tools p. 46
- 3.5.4 MPLS Tools p. 48
- 3.6 Current Activities in IP/MPLS Network Management p. 49

- 3.6.1 The IETF Working Groups p. 49
- 3.6.2 TMF IPNM p. 49
- 3.7 Summary p. 50
- References p. 51
- 4 Management of the WDM Network Layer p. 55
- 4.1 Introduction p. 55
- 4.2 The WDM Network Elements p. 56
- 4.3 Optical Transport Network Modeling p. 56
- 4.3.1 Functional Layers p. 58
- 4.3.2 Optical Transport Services p. 59
- 4.4 Managing WDM Networks p. 61
- 4.4.1 Configuration Management p. 61
- 4.4.2 Fault Management p. 63
- 4.4.3 Performance Management p. 66
- 4.4.4 Management Interfaces p. 69
- 4.5 Summary p. 70
- References p. 71
- 5 IP Over WDM Integration Mechanisms p. 73
- 5.1 Introduction p. 73
- 5.2 IP Over WDM--The Data Plane Perspective p. 74
- 5.2.1 IP Over ATM Over SDH for WDM Transmission p. 74
- 5.2.2 IP Over ATM Directly on WDM p. 75
- 5.2.3 IP Over SDH; Packet Over SONET p. 76
- 5.2.4 IP Over SDL Directly Over WDM p. 77
- 5.2.5 IP Over GbE Over WDM p. 78
- 5.3 Control Plane Integration p. 79
- 5.3.1 MPLambdaS-Generalized MPLS p. 80
- 5.3.2 The ASON/ASTN Framework p. 81
- 5.3.3 The OIF Forum Initiative p. 83
- 5.4 The Management Plane Approach p. 84
- 5.5 Summary p. 85
- References p. 86
- 6 The WINMAN Management System Concept p. 89
- 6.1 Introduction p. 89
- 6.2 Business Reference Model p. 91
- 6.2.1 Business Roles and Actors p. 91
- 6.2.2 Business Case p. 93
- 6.2.3 Business Processes Addressed by WINMAN p. 95
- 6.2.4 High-Level Management Architecture p. 96
- 6.3 Requirements Specification p. 96
- 6.3.1 Requirements Classification p. 97
- 6.3.2 Nonfunctional Requirements p. 102
- 6.4 WINMAN UCs p. 102
- 6.4.1 Identification and Classification of UCs p. 102

- 6.4.2 UCs Overview p. 102
- 6.5 Summary p. 119
- References p. 120
- 7 The WINMAN System Architecture p. 121
- 7.1 Introduction p. 121
- 7.2 High-Level Architecture p. 122
- 7.2.1 The Interdomain Network Management System p. 122
- 7.2.2 The WDM-NMS p. 124
- 7.2.3 The IP NMS p. 125
- 7.2.4 The GUI p. 125
- 7.2.5 Component Interaction Example: A Connectivity Service Provisioning Scenario p. 126
- 7.3 Domain Model p. 127
- 7.3.1 Common Entities p. 127
- 7.3.2 Mapping Between the Model Entities and the Managed Resources p. 128
- 7.4 Generic Management System Architecture p. 130
- 7.4.1 The Three-Tiers Concept p. 130
- 7.4.2 The Northbound Interface p. 132
- 7.4.3 The Southbound Interface p. 133
- 7.4.4 The View Manager Interface p. 133
- 7.4.5 The Persistence Layer Interface p. 133
- 7.5 The GUI p. 133
- 7.5.1 Model-View-Controller Architecture p. 134
- 7.5.2 GUI Functional Components p. 135
- 7.6 Summary p. 136
- References p. 137
- 8 Management System Design and Implementation Issues p. 139
- 8.1 Introduction p. 139
- 8.2 Provisioning Manager p. 140
- 8.3 End-to-End Routing Manager p. 143
- 8.4 NIM p. 143
- 8.4.1 The Inventory Model p. 145
- 8.4.2 Querying the Inventory p. 145
- 8.5 Policy Manager p. 146
- 8.6 View Manager p. 147
- 8.7 Northbound Interface Manager p. 149
- 8.7.1 INMS Adaptations p. 152
- 8.8 Southbound Interface Manager p. 152
- 8.8.1 INMS Adaptations p. 152
- 8.8.2 IP and WDM NMS Adaptations p. 153
- 8.9 The GUI p. 154
- 8.10 Summary p. 158
- References p. 159
- 9 Technologies and Tools p. 161
- 9.1 Introduction p. 161

- 9.2 Development Platforms p. 162
- 9.2.1 Network Management Platforms p. 162
- 9.2.2 The Distributed Software Component Framework p. 163
- 9.2.3 The Netrac Platform p. 164
- 9.2.4 The WINMAN Implementation p. 165
- 9.3 Operating Systems p. 166
- 9.3.1 UNIX p. 166
- 9.3.2 Windows p. 166
- 9.3.3 The WINMAN Implementation p. 167
- 9.4 Programming Languages p. 167
- 9.4.1 Java Programming Language p. 167
- 9.4.2 C++ Programming Language p. 168
- 9.4.3 The WINMAN Implementation p. 168
- 9.5 The Middleware p. 169
- 9.5.1 CORBA p. 169
- 9.5.2 XML p. 171
- 9.5.3 The WINMAN Implementation p. 173
- 9.6 Interfaces Specification p. 173
- 9.6.1 CORBA p. 173
- 9.6.2 SNMP p. 174
- 9.6.3 The WINMAN Implementation p. 174
- 9.7 Connectivity Interface Protocols p. 174
- 9.7.1 Connection and Service Management Information Model p. 175
- 9.7.2 Multitechnology Network Management p. 175
- 9.7.3 The WINMAN Implementation p. 176
- 9.8 Databases p. 177
- 9.8.1 The WINMAN Implementation p. 177
- 9.9 User Interface Tools p. 177
- 9.9.1 Hypertext Markup Language p. 177
- 9.9.2 Java p. 178
- 9.9.3 The WINMAN Implementation p. 179
- 9.10 Policy-Based Management Tools p. 179
- 9.10.1 Ponder p. 180
- 9.10.2 The WINMAN Implementation p. 180
- 9.11 Summary p. 181
- References p. 182
- 10 Testbed Setup for the Evaluation of IP over WDM Management Systems p. 183
- 10.1 Introduction p. 183
- 10.2 Testbed Requirements p. 184
- 10.2.1 Requirements on the Management Platforms p. 184
- 10.2.2 Requirements on the Testing and Verification Tools p. 186
- 10.2.3 Requirements on the IP Infrastructure p. 188
- 10.2.4 Requirements on the WDM Infrastructure p. 189
- 10.3 The WINMAN Testbed p. 190

- 10.3.1 The IP Layer p. 190
- 10.3.2 The WDM Layer p. 191
- 10.3.3 Interconnection of the IP and WDM Nodes p. 193
- 10.4 Adaptation of the Technology-Dependent EMSs to the WINMAN Southbound Interface p. 194
 - 10.4.1 Adaptation of the WDM EMS p. 194
 - 10.4.2 Adaptation of the IP EMS p. 195
- 10.5 Summary p. 196
- References p. 197
- 11 Evaluation of IP over WDM Management Solutions p. 199
 - 11.1 Introduction p. 199
 - 11.2 Template for the Definition of Testing Experiments p. 200
 - 11.3 Evaluating the Nonfunctional Behavior p. 200
 - 11.3.1 Openness and Flexibility p. 200
 - 11.3.2 Flexibility and Modularity p. 202
 - 11.3.3 Scalability p. 202
 - 11.3.4 Robustness p. 203
 - 11.4 Evaluation of Functional Behavior p. 203
 - 11.4.1 Configuration Management/Network Provisioning/Create Optical Path p. 204
 - 11.4.2 Configuration Management/Network Provisioning/Create IP/MPLS Path p. 204
 - 11.4.3 Configuration Management/Network Provisioning/ICS Provisioning p. 205
 - 11.4.4 Network Inventory Management/Network Inventory Consistency to Network Infrastructure p. 207
 - 11.5 The WINMAN Configuration Management Solution Evaluation p. 207
 - 11.5.1 Integrated Experiment for Validating the WINMAN Functionality p. 207
 - 11.5.2 Experiment Results p. 212
 - 11.5.3 Evaluation of the Results p. 214
 - 11.6 Summary p. 215
 - References p. 216
- 12 Integration of IP over WDM: The LION Project Approach p. 217
 - 12.1 Introduction p. 217
 - 12.2 Network Studies p. 219
 - 12.2.1 Teletraffic Engineering for Modeling Dynamic Traffic and Dimensioning ASON p. 220
 - 12.2.2 ASONs and Their Potential Benefits p. 221
 - 12.2.3 Some Guidelines on Network Evolution p. 224
 - 12.3 Network Management p. 226
 - 12.3.1 Challenges in ASON Management p. 226
 - 12.3.2 The LION Management Approach p. 227
 - 12.3.3 Management Information Model p. 228
 - 12.4 The Testbed p. 232
 - 12.4.1 Testbed Equipment p. 232
 - 12.4.2 Control Plane Architecture p. 238
 - 12.4.3 NNI Signaling For Soft-Permanent Connection Setup and Tear Down p. 240

- 12.4.4 Tests Carried Out p. 241
- References p. 241
- 13 Future Developments and Challenges for IP over WDM Network Deployment p. 243
- 13.1 Introduction p. 243
- 13.2 The Outlook from the IST-OPTIMIST Project p. 244
- 13.2.1 Technology Trends in Optical Technologies and Photonic Networking p. 246
- 13.2.2 The Global Communication Network in More Detail p. 248
- 13.2.3 Future Trends for Optical Components p. 252
- 13.3 Challenges of IP/WDM Network Control and Management p. 255
- 13.3.1 End-to-End Routing p. 255
- 13.3.2 Dynamic Routing and Wavelength Conversion in the Optical Domain p. 256
- 13.3.3 IP/WDM Fault Management p. 257
- 13.3.4 IP/WDM Performance Management p. 259
- 13.4 Deployment of IP/WDM Networks p. 259
- 13.4.1 Adoption of Optical CP p. 259
- 13.4.2 Possible Deployment Scenarios p. 261
- 13.5 Summary p. 263
- References p. 264
