

- Introduction
- Combinatorial Games
- Hex and Other Games
- Bogus Nim-Sums
- Games in Normal Form
- Maximin and Minimax
- $2 \times n$ ,  $m \times 2$ , and  $3 \times 3$  Matrix Games
- Definition of Combinatorial Game
- Nim
- Mixed Strategies
- The Fundamental Theorem for Combinatorial Games
- Tree Games
- Grundy Functions
- Two-Person Zero-Sum Games
- Saddle Points and Equilibrium Pairs
- $2 \times 2$  Matrix Games
- Linear Programming. Von Neumann's Theorem
- Solution Of Two-Person Zero-Sum Games
- Slack Variables
- Perfect Canonical Linear Programming Problems
- The Simplex Method
- Pivoting
- The Perfect Phase of the Simplex Method
- The Big M Method
- Bland's Rules to Prevent Cycling
- Duality and the Simplex Method
- Solution of Game Matrices
- Proofs of Facts 1-4
- Non-Zero-Sum Games And K-Person Games
- The General Setting
- Nash Equilibria
- Inadequacies of Nash Equilibria in Non-Zero-Sum Games
- Cooperative Games
- The Nash Arbitration Procedure
- Games with Two or More Players
- Coalitions
- Games in Coalition Form
- The Shapley Value
- The Simplex Method
- The Fundamental Theorem Of Duality
- Graphical Method for Finding Nash Equilibria for  $2 \times 2$  Matrices
- Strategic Equivalence
- Stable Sets
- Appendices

- Finite Probability Theory
- Utility Theory
- Nash's Theorem
- Answers to Selected Exercises
- Bibliography
- Index
