

- Authors p. xv
- Foreword p. xvii
- Some Notations and Remarks p. xix
- 1. Parabolic Equations with One Space Variable p. 1
  - 1.1. Equations with Power-Law Nonlinearities p. 1
  - 1.2. Equations with Exponential Nonlinearities p. 52
  - 1.3. Equations with Hyperbolic Nonlinearities p. 62
  - 1.4. Equations with Logarithmic Nonlinearities p. 64
  - 1.5. Equations with Trigonometric Nonlinearities p. 68
  - 1.6. Equations Involving Arbitrary Functions p. 71
  - 1.7. Nonlinear Schrodinger Equations and Related Equations p. 125
- 2. Parabolic Equations with Two or More Space Variables p. 141
  - 2.1. Equations with Two Space Variables Involving Power-Law Nonlinearities p. 141
  - 2.2. Equations with Two Space Variables Involving Exponential Nonlinearities p. 154
  - 2.3. Other Equations with Two Space Variables Involving Arbitrary Parameters p. 157
  - 2.4. Equations Involving Arbitrary Functions p. 159
  - 2.5. Equations with Three or More Space Variables p. 169
  - 2.6. Nonlinear Schrodinger Equations p. 186
- 3. Hyperbolic Equations with One Space Variable p. 191
  - 3.1. Equations with Power-Law Nonlinearities p. 191
  - 3.2. Equations with Exponential Nonlinearities p. 213
  - 3.3. Other Equations Involving Arbitrary Parameters p. 225
  - 3.4. Equations Involving Arbitrary Functions p. 234
  - 3.5. Equations of the Form  $[\text{partial differential}]^2 w / [\text{partial differential}]_x [\text{partial differential}]_y = F(x, y, w, [\text{partial differential}]_w / [\text{partial differential}]_x, [\text{partial differential}]_w / [\text{partial differential}]_y)$  p. 266
- 4. Hyperbolic Equations with Two or Three Space Variables p. 275
  - 4.1. Equations with Two Space Variables Involving Power-Law Nonlinearities p. 275
  - 4.2. Equations with Two Space Variables Involving Exponential Nonlinearities p. 292
  - 4.3. Nonlinear Telegraph Equations with Two Space Variables p. 299
  - 4.4. Equations with Two Space Variables Involving Arbitrary Functions p. 305
  - 4.5. Equations with Three Space Variables Involving Arbitrary Parameters p. 317
  - 4.6. Equations with Three Space Variables Involving Arbitrary Functions p. 334
- 5. Elliptic Equations with Two Space Variables p. 347
  - 5.1. Equations with Power-Law Nonlinearities p. 347
  - 5.2. Equations with Exponential Nonlinearities p. 364
  - 5.3. Equations Involving Other Nonlinearities p. 376
  - 5.4. Equations Involving Arbitrary Functions p. 382
- 6. Elliptic Equations with Three or More Space Variables p. 405
  - 6.1. Equations with Three Space Variables Involving Power-Law Nonlinearities p. 405
  - 6.2. Equations with Three Space Variables Involving Exponential Nonlinearities p. 413
  - 6.3. Three-Dimensional Equations Involving Arbitrary Functions p. 420
  - 6.4. Equations with n Independent Variables p. 428
- 7. Equations Involving Mixed Derivatives and Some Other Equations p. 433

- 7.1. Equations Linear in the Mixed Derivative p. 433
- 7.2. Equations Quadratic in the Highest Derivatives p. 449
- 7.3. Bellman Type Equations and Related Equations p. 472
- 8. Second-Order Equations of General Form p. 479
- 8.1. Equations Involving the First Derivative in  $t$  p. 479
- 8.2. Equations Involving Two or More Second Derivatives p. 501
- 9. Third-Order Equations p. 515
- 9.1. Equations Involving the First Derivative in  $t$  p. 515
- 9.2. Equations Involving the Second Derivative in  $t$  p. 536
- 9.3. Hydrodynamic Boundary Layer Equations p. 540
- 9.4. Equations of Motion of Ideal Fluid (Euler Equations) p. 570
- 9.5. Other Third-Order Nonlinear Equations p. 580
- 10. Fourth-Order Equations p. 589
- 10.1. Equations Involving the First Derivative in  $t$  p. 589
- 10.2. Equations Involving the Second Derivative in  $t$  p. 595
- 10.3. Equations Involving Mixed Derivatives p. 605
- 11. Equations of Higher Orders p. 631
- 11.1. Equations Involving the First Derivative in  $t$  and Linear in the Highest Derivative p. 631
- 11.2. General Form Equations Involving the First Derivative in  $t$  p. 651
- 11.3. Equations Involving the Second Derivative in  $t$  p. 666
- 11.4. Other Equations p. 676
- Supplements. Exact Methods for Solving Nonlinear Partial Differential Equations p. 683
- S.1. Classification of Second-Order Semilinear Partial Differential Equations in Two Independent Variables p. 683
- S.2. Transformations of Equations of Mathematical Physics p. 685
- S.3. Traveling-Wave Solutions and Self-Similar Solutions. Similarity Methods p. 693
- S.4. Method of Generalized Separation of Variables p. 698
- S.5. Method of Functional Separation of Variables p. 713
- S.6. Generalized Similarity Reductions of Nonlinear Equations p. 728
- S.7. Group Analysis Methods p. 735
- S.8. Differential Constraints Method p. 747
- S.9. Painleve Test for Nonlinear Equations of Mathematical Physics p. 758
- S.10. Inverse Scattering Method p. 764
- S.11. Conservation Laws p. 769
- S.12. Hyperbolic Systems of Quasilinear Equations p. 772
- References p. 791
- Index p. 809
