

- **Preface** (p. xvii)
- **Note to Students** (p. xix)
- **Conventions in Our Presentation** (p. xxi)
- **1 How Long Is a Worm?** (p. 1)
- **1.1 Introduction** (p. 1)
- **1.2 Sampling a Population** (p. 2)
- **1.2.1 Measuring Worms** (p. 2)
- **1.2.2 Summary Measures: "Centre"** (p. 3)
- **1.2.3 Summary Measures: "Spread"** (p. 3)
- **1.2.4 Generalising from the Sample to the Population** (p. 7)
- **1.2.5 How Reliable Is Our Sample Estimate?** (p. 8)
- **1.2.5.1 Naming of Parts** (p. 8)
- **1.3 The Normal Distribution** (p. 8)
- **1.4 Probability** (p. 10)
- **1.4.1 What Do We Mean by a Probability?** (p. 11)
- **1.4.2 Writing Down Probabilities** (p. 11)
- **1.4.2.1 Multiplication Law (Product Rule)** (p. 12)
- **1.4.2.2 Addition Law (Summation Rule)** (p. 12)
- **1.4.3 Important Restriction** (p. 12)
- **1.4.4 An Example** (p. 13)
- **1.4.5 Probability Density Functions** (p. 14)
- **1.4.6 What Have We Drawn, Exactly?** (p. 15)
- **1.5 Continuous Measurements - Worms Again** (p. 16)
- **1.5.1 Standardising the Normal - An Ingenious Arithmetical Conjuring Trick** (p. 19)
- **1.6.2 The Second Step - The Sum of the Squared Differences** (p. 22)
- **1.5.2 Estimating Population Parameters from Sample Statistics** (p. 21)
- **1.6 Expressing Variability** (p. 22)
- **1.6.1 The First Step - The Sum of the Differences** (p. 22)
- **1.6.3 Third Step - The Variance** (p. 24)
- **1.6.3.1 Degrees of Freedom** (p. 25)
- **1.6.3.2 Estimated Parameters** (p. 25)
- **1.6.3.3 Bias in the Estimation** (p. 26)
- **1.6.4 Fourth Step - The Standard Deviation** (p. 27)
- **1.6.5 Fifth Step - The Sampling Distribution of the Mean** (p. 28)
- **1.6.6 Sixth Step - The Standard Error of the Mean** (p. 30)
- **2 Confidence Intervals** (p. 33)
- **2.1 The Importance of Confidence Intervals** (p. 33)
- **2.2 Calculating Confidence Intervals** (p. 34)
- **2.3 Another Way of Looking at It** (p. 36)
- **2.4 Your First Statistical Test** (p. 38)
- **2.4.1 Develop a Research Hypothesis - Something That You Can Test** (p. 38)
- **2.4.5 Find the Probability of the Test Statistic Value if the Null Hypothesis Was True** (p. 40)
- **2.4.2 Deduce a Null Hypothesis - Something That You Can Disprove** (p. 39)
- **2.4.3 Collect the Data** (p. 39)
- **2.4.4 Calculate a Test Statistic** (p. 40)

- **2.4.7 Using the Computer to Conduct the Test** (p. 43)
- **2.4.5.1 Finding the Probability Directly** (p. 40)
- **2.4.5.2 Comparing the Test-Statistic with a Threshold** (p. 40)
- **2.4.6 Decide Whether to Reject or Accept the Null Hypothesis** (p. 42)
- **2.5 One- and Two-Tailed Tests** (p. 44)
- **2.5.1 Why Is the Two-Tailed Confidence Interval Different from the One-Tailed?** (p. 46)
- **2.5.2 What if the New Area Turned Out to Have Smaller Fish?** (p. 47)
- **2.5.3 Tails and Tables** (p. 49)
- **2.5.4 When You Can and Cannot Use a One-Tailed Alternative** (p. 49)
- **2.6 The Other Side of the Coin - Type II Errors** (p. 49)
- **2.7 Recap - Hypothesis Testing** (p. 50)
- **2.8 A Complication** (p. 51)
- **2.9 Testing Fish with t** (p. 52)
- **2.10 MINITAB Does a One-Sample t-Test** (p. 53)
- **2.11 95% CI for Worms** (p. 53)
- **2.12 Anatomy of Test Statistics** (p. 54)
- **3 Comparing Things: Two Sample Tests** (p. 57)
- **3.1 A Simple Case** (p. 57)
- **3.2 Matched-Pairs t-Test** (p. 58)
- **3.3 Another Example - Testing Twin Sheep** (p. 60)
- **3.4 Independent Samples: Comparing Two Populations** (p. 63)
- **3.4.1 The Two-Sample t-Test** (p. 63)
- **3.5 Calculation of Independent Samples t-Test** (p. 64)
- **3.6 One- and Two-Tailed Tests - A Reminder** (p. 69)
- **3.7 MINITAB Carries Out a Two-Sample t-Test** (p. 70)
- **3.8 Pooling the Variances?** (p. 71)
- **3.8.1 Why Pool?** (p. 71)
- **3.8.2 When to Pool?** (p. 71)
- **3.8.3 What if the Variances Are Different?** (p. 72)
- **4 Planning an Experiment** (p. 75)
- **4.1 Principles of Sampling** (p. 75)
- **4.1.1 First, Catch Your Worm!** (p. 75)
- **4.1.2 The Concept of Random Sampling** (p. 76)
- **4.3.2 Replication** (p. 79)
- **4.1.3 How to Select a Random Sample** (p. 76)
- **4.1.4 Systematic Sampling** (p. 77)
- **4.2 Comparing More Than Two Groups** (p. 78)
- **4.3 Principles of Experimental Design** (p. 79)
- **4.3.1 Objectives** (p. 79)
- **4.3.3 Randomisation** (p. 81)
- **4.3.4 Controls** (p. 82)
- **4.3.5 Blocking** (p. 83)
- **4.4 Recording Data and Simulating an Experiment** (p. 86)
- **4.5 Simulating Your Experiment** (p. 86)
- **4.5.1 Creating the Data Set** (p. 87)

- **4.5.2 Analysing the Simulated Data** (p. 89)
- **5 Partitioning Variation and Constructing a Model** (p. 91)
- **5.1 It's Simple...** (p. 91)
- **5.2 ...But Not That Simple** (p. 91)
- **5.3 The Example: Field Margins in Conservation** (p. 92)
- **5.4 The Idea of a Statistical Model** (p. 93)
- **5.5 Laying Out the Experiment** (p. 94)
- **5.5.1 Replication** (p. 94)
- **5.5.2 Randomisation and Blocking** (p. 95)
- **5.5.3 Practical Considerations** (p. 96)
- **5.6 Sources of Variation: Random Variation** (p. 97)
- **5.7 The Model** (p. 98)
- **5.7.1 Blocking** (p. 99)
- **6 Analysing Your Results: Is There Anything There?** (p. 105)
- **6.1 Is Spider Abundance Affected by Treatment?** (p. 105)
- **6.2 Why Not Use Multiple t-Tests?** (p. 105)
- **6.3 ANOVA for a Wholly Randomised Design** (p. 106)
- **6.3.1 Calculating the Total Sum-of-Squares** (p. 107)
- **6.3.2 Calculating the Error (Residual) Sum-of-Squares** (p. 110)
- **6.3.3 Calculating the Treatment Sum-of-Squares** (p. 110)
- **6.4 Comparing the Sources of Variation** (p. 111)
- **6.5 The Two Extremes of Explanation: All or Nothing** (p. 111)
- **6.5.1 Treatments Explain Nothing** (p. 111)
- **6.5.2 Treatments Explain Everything** (p. 112)
- **6.6 The ANOVA Table** (p. 112)
- **6.6.1 Sources of Variation and Degrees of Freedom** (p. 112)
- **6.6.2 Comparing the Sums of Squares** (p. 113)
- **6.6.3 The Mean Square** (p. 114)
- **6.7 Testing Our Hypothesis** (p. 115)
- **6.8 Including Blocks: Randomised Complete Block Designs** (p. 116)
- **6.9 Analysing the Spider Data Set in MINITAB** (p. 119)
- **6.9.1 One-Way ANOVA** (p. 119)
- **6.9.2 Two-Way ANOVA** (p. 120)
- **6.9.3 Box Plots for Treatments** (p. 121)
- **6.10 The Assumptions Behind ANOVA and How to Test Them** (p. 122)
- **6.10.1 Independence** (p. 122)
- **6.10.2 Normality of Error** (p. 122)
- **6.10.3 Homogeneity of Variance** (p. 124)
- **6.10.4 Additivity** (p. 124)
- **6.11 Another Use for the F-Test: Testing Homogeneity of Variance** (p. 125)
- **7 Interpreting Your Analysis: From Hypothesis Testing to Biological Meaning** (p. 127)
- **7.1 Treatment Means and Confidence Intervals** (p. 127)
- **7.1.1 Calculating the 95% Confidence Interval for the Treatment Mean** (p. 128)
- **7.2 Difference Between Two Treatment Means** (p. 129)
- **7.3 Getting More Out of an Experiment: Factorial Designs and Interactions** (p. 130)

- **7.3.1 What Is "Hidden Replication"?** (p. 131)
- **7.4 Getting More Out of the Analysis: Using the Factorial Design to Ask More Relevant Questions** (p. 131)
- **7.5 Interactions** (p. 134)
  - **7.5.1 Where Does the Interaction Term Come from?** (p. 134)
  - **7.5.2 Testing the Interaction: Is It Significant?** (p. 135)
  - **7.5.3 Degrees of Freedom for an Interaction Term** (p. 135)
- **7.8.1 An Example of Loss of Data: The Plant Hormone Experiment** (p. 143)
- **7.6 Adding Blocking to the Factorial Analysis** (p. 137)
- **7.7 How to Interpret Interaction Plots: The Plant Hormone Experiment** (p. 138)
- **7.8 Loss of Data and Unbalanced Experiments** (p. 142)
  - **7.8.2 Calculating Standard Errors Where You Have Missing Observations** (p. 144)
- **7.9 Limitations of ANOVA and the General Linear Model (GLM)** (p. 145)
- **8 Relating One Variable to Another** (p. 147)
  - **8.1 Correlation** (p. 147)
  - **8.2 Calculating the Correlation Coefficient, and a New Idea: Covariance** (p. 151)
  - **8.3 Regression** (p. 152)
  - **8.4 Linear Regression** (p. 154)
  - **8.5 The Model** (p. 155)
    - **8.6.1 Fitting Data to Hypotheses** (p. 160)
  - **8.7 A Further Example of Linear Regression** (p. 161)
  - **8.8 Assumptions** (p. 164)
    - **8.8.1 Independence** (p. 164)
    - **8.8.2 Normal Distribution of Error** (p. 165)
    - **8.8.3 Homogeneity of Variance** (p. 165)
    - **8.8.4 Linearity** (p. 165)
    - **8.8.5 Continuity** (p. 165)
    - **8.8.6 Absence of "Errors" in x-Values** (p. 167)
  - **8.9 The Importance of Plotting Observations** (p. 168)
    - **8.9.1 Same Equation from Different Patterns?** (p. 168)
    - **8.9.2 Plot the Data and the Fitted Line** (p. 170)
    - **8.9.3 Plot the Histogram of the Standardised Residuals** (p. 170)
    - **8.9.4 Plot the Residuals against the Fitted Values** (p. 170)
  - **8.11 Standard Error of Prediction (Prediction Interval)** (p. 176)
- **8.6 Interpreting Hypothesis Tests in Regression** (p. 160)
  - **8.9.5 Conclusion** (p. 174)
  - **8.10 Confidence Intervals** (p. 174)
    - **8.10.1 C.I. for the Slope of the Line** (p. 175)
    - **8.10.2 C.I. for the Regression Line** (p. 175)
  - **8.12 Caution in the Interpretation of Regression and Correlation** (p. 178)
    - **8.12.1 Correlation Is Not Causation** (p. 178)
    - **8.12.2 Extrapolation Is Dangerous!** (p. 178)
- **9 Categorical Data** (p. 179)
  - **9.1 The Chi-Squared Goodness-of-Fit Test** (p. 180)
    - **9.1.1 Simple Example: Sex Ratio in an Oxford Family** (p. 180)
    - **9.2 A More Interesting Example: Testing Genetic Models** (p. 181)

- **9.2.1 Expected Proportions** (p. 182)
- **9.2.2 Expected Frequencies** (p. 184)
- **9.2.3 Degrees of Freedom - A Catch** (p. 184)
- **9.2.4 Hypothesis Testing in Genetics** (p. 185)
- **9.3 Contingency Analysis: Chi-Squared Test of Proportions** (p. 185)
- **9.3.1 Organizing the Data for Contingency Analysis** (p. 187)
- **9.3.2 Some Important Requirements for Carrying Out a Valid  $\chi^2$  Contingency Test** (p. 189)
- **9.4 A Further Example of a Chi-Squared Contingency Test** (p. 191)
- **9.5 Beyond Two-Dimensional Tables: The Likelihood Ratio Chi-Square** (p. 192)
- **10 Nonparametric Tests** (p. 195)
- **10.1 Introduction** (p. 195)
- **10.1.1 When Are Assumptions Likely to Fail?** (p. 196)
- **10.2 Basic Ideas** (p. 199)
- **10.2.1 Ranking** (p. 199)
- **10.2.2 Measures of Centre and Scatter** (p. 200)
- **10.2.3 Median** (p. 200)
- **10.3.2 Test Statistics** (p. 202)
- **10.2.4 Quartiles and Other Quantiles** (p. 201)
- **10.3 A Taxonomy of Tests** (p. 202)
- **10.3.1 Hypothesis Testing** (p. 202)
- **10.4 Single-Sample Tests** (p. 203)
- **10.4.1 Sign Test** (p. 203)
- **10.4.2 Wilcoxon Single-Sample Test** (p. 204)
- **10.5 Matched-Pairs Tests** (p. 205)
- **10.5.1 Sign Test and Wilcoxon on Differences** (p. 206)
- **10.6 Independent Samples** (p. 206)
- **10.7 Two Quantitative Variables: Spearman's Rank Correlation** (p. 216)
- **10.6.1 Two Groups: Mann-Whitney Test** (p. 206)
- **10.6.2.1 Another Example of the Kruskal-Wallis Test** (p. 211)
- **10.6.3 Several Groups with Blocking: Friedman's Test** (p. 212)
- **10.6.3.1 Antibiotic Experiment with Blocking** (p. 214)
- **10.6.2 More than Two Groups: Kruskal-Wallis Test** (p. 208)
- **10.7.1 Tied Observations in Spearman's Correlation** (p. 218)
- **10.8 Why Bother with Parametric Tests?** (p. 218)
- **10.8.1 Nonparametrics Have Lower Power Efficiency** (p. 218)
- **10.8.2 Available Nonparametric Analyses Are Less Complex** (p. 218)
- **11 Managing Your Project** (p. 219)
- **11.1 Choosing a Topic and a Supervisor** (p. 219)
- **11.2 Common Mistakes** (p. 220)
- **11.3 General Principles of Experimental Design and Execution** (p. 221)
- **11.3.1 What Are the Aims and Objectives of the Experiment?** (p. 221)
- **11.3.2 What Population Are You Studying?** (p. 221)
- **11.3.3 What Are the Experimental Units, and How Are They Grouped?** (p. 222)
- **11.3.4 What Are the Experimental Treatments, and What Is Your Control?** (p. 222)

- **11.3.5 Will Randomisation Be across All the Experimental Units or Constrained within Groups?** (p. 223)
- **11.3.6 How Many Replicates Should You Have?** (p. 223)
- **11.3.7 What Resources (and Constraints) Do You Have?** (p. 223)
- **11.3.8 How Will You Analyse Your Data?** (p. 224)
- **11.3.9 Recording Data** (p. 224)
- **11.4 Analysing Your Data and Writing the Report** (p. 226)
- **11.3.10 Other Considerations: Health and Safety, Ethical and Legal Issues** (p. 224)
  - **11.3.10.1 Fieldwork** (p. 225)
  - **11.3.10.2 Labwork** (p. 225)
- **11.4.1 Are Your Data Correct?** (p. 226)
- **11.5 Structure** (p. 227)
  - **11.5.1 Title** (p. 227)
  - **11.5.2 Abstract** (p. 227)
  - **11.5.3 Introduction** (p. 227)
  - **11.5.4 Materials and Methods** (p. 227)
  - **11.5.5 Results** (p. 228)
  - **11.5.6 Discussion** (p. 228)
  - **11.5.7 References** (p. 229)
  - **11.5.8 Acknowledgments** (p. 229)
  - **11.5.9 Appendices** (p. 229)
- **11.6 The First Draft** (p. 230)
- **11.7 Illustrating Results** (p. 230)
  - **11.7.1 Graphs** (p. 231)
  - **11.7.2 Tables** (p. 231)
- **11.8 What It Is All About: Getting Through Your Project** (p. 232)
- **Appendix A An Introduction to MINITAB** (p. 237)
  - **A.1 Conventions Used in This Book** (p. 237)
  - **A.2 Starting Up** (p. 238)
  - **A.3 Help** (p. 238)
  - **A.4 Data Entry** (p. 238)
  - **A.5 Looking at the Worms Data** (p. 239)
    - **A.5.1 Display the Information in a Column** (p. 239)
    - **A.5.2 Dot Plot the Data** (p. 239)
  - **A.8 Looking Up Probabilities** (p. 242)
  - **A.5.3 Produce Summary Statistics** (p. 239)
    - **A.5.4 Box Plot** (p. 239)
    - **A.5.5 Histogram** (p. 240)
  - **A.6 Updating Graphs** (p. 241)
  - **A.7 Stacking and Unstacking - A Useful Trick** (p. 241)
    - **A.8.1 Probability Density** (p. 243)
    - **A.8.2 Cumulative Density** (p. 243)
    - **A.8.3 Inverse Cumulative Density** (p. 244)
    - **A.8.4 Graphical Output - New in MINITAB 15** (p. 245)
  - **A.9 Report Writer** (p. 245)
  - **A.10 The MINITAB Command Line** (p. 246)

- **A.11 Saving Your Session** (p. 247)
- **Appendix B Statistical Power and Sample Size** (p. 249)
- **Appendix C Statistical Tables** (p. 255)
- **Appendix D References and Further Reading** (p. 265)
- **References** (p. 265)
- **Further Reading** (p. 265)
- **Appendix E Statistical Tests** (p. 267)
- **Index** (p. 269)
