

- Chapter 1 Introduction p. 1
- What are intelligent material systems and structures? p. 2
- The basis of the revolution p. 4
- Identifying macromolecular building blocks p. 5
- Academic research in conducting polymers p. 8
- Spin-offs: other applications for conducting electroactive polymer systems p. 9
- Applications utilizing the polymers' inherent conductivity p. 10
- Electrochemical switching, energy storage and conversion p. 12
- Polymer photovoltaics (light-induced charge separation) p. 13
- Display technologies: electrically stimulated light emission p. 14
- Electrochromics p. 16
- Electromechanical actuators p. 16
- Separation technologies p. 18
- Cellular communications p. 21
- Controlled release devices p. 21
- Corrosion protection p. 23
- Chemical sensors p. 24
- Physical sensors p. 26
- Communication and characterization tools p. 27
- Electrochemical methods p. 28
- Electrochemical quartz crystal microbalance (EQCM) p. 31
- Resistometry p. 31
- Electromechanical analysis (EMA) p. 33
- Chemical analysis p. 34
- Scanning probe microscopy p. 38
- Raman and UV-visible spectroscopy p. 42
- Localized electrochemical mapping p. 44
- Conclusions: conducting polymers as intelligent materials p. 45
- References p. 46
- Chapter 2 Assembly of polypyrroles p. 51
- Synthesis and structure of polypyrroles p. 51
- Electropolymerization: a complex process oversimplified p. 52
- The polymerization environment and cell design p. 55
- Electrochemical conditions p. 59
- Electrode materials p. 60
- The solvent p. 63
- The counterion/cation effect: choice of electrolyte p. 65
- The monomer p. 67
- Chemical polymerization p. 68
- The quest for extra functionality p. 77
- Molecular Structure and Microstructure of Polypyrrole p. 79
- Molecular Weight, Branching and Crosslinking p. 79
- Crystallinity and Molecular Order p. 81
- Surface Morphology and Film Density p. 82
- References p. 84
- Switching properties p. 93

- Chapter 3 Properties of polypyrroles p. 89
- Electrical properties--conductivity p. 89
- Chemical and biochemical properties p. 99
- Optical properties of PPys p. 103
- Chiroptical properties of optically active PPys p. 105
- Mechanical properties of PPy p. 106
- Dry state mechanical properties p. 107
- Environmental effects on mechanical properties p. 112
- Conclusions p. 113
- References p. 115
- Chapter 4 Synthesis of polyanilines p. 121
- Electrochemical polymerization p. 122
- Electrode materials p. 124
- The solvent p. 125
- The electrolyte p. 125
- The monomer p. 126
- Colloids p. 126
- Chemical polymerization p. 127
- Mechanism of chemical polymerization p. 127
- Polymerization temperature p. 128
- Nature of the acid (HA) p. 129
- Nature of the oxidant p. 129
- Nature of the solvent p. 130
- Achieving regioselective coupling with aniline monomers p. 130
- Template-guided synthesis p. 131
- Comparison of chemically and electrochemically prepared PAn films p. 131
- In situ chemical polymerization p. 131
- Deposition on glass/plastics p. 131
- Deposition on fibers or fabrics p. 132
- Vapor phase deposition p. 132
- Deposition in nanoscale matrices p. 132
- Photochemically initiated polymerization p. 133
- Enzyme-catalyzed polymerization p. 133
- Polymerization using electron acceptors p. 134
- Miscellaneous polymerization methods p. 135
- Routes to more processible polyanilines p. 135
- Emulsion polymerization p. 135
- Colloidal polyaniline dispersions p. 136
- Substituted polyanilines p. 137
- Postpolymerization modification--enhancing functionality p. 139
- Covalently substituted polyanilines p. 140
- Doping of EB with Bronsted acids, HA p. 141
- Incorporation of chiral dopant anions or cations p. 142
- Doping of EB with Lewis acids p. 142
- Doping of EB with organic electron acceptors p. 143
- Ion implantation p. 144

- Structure of Polyaniline p. 144
- Molecular Structure and Conformation p. 144
- Molecular Weight p. 144
- Chain Conformation p. 145
- Bulk Structure p. 146
- Nanoscale Heterogeneity p. 146
- Crystallinity, molecular order and conformation in solid state p. 146
- Morphology and Density p. 151
- Switching properties p. 165
- References p. 153
- Chapter 5 Properties of polyanilines p. 161
  - Electrical properties p. 161
  - Chemical properties p. 168
  - Mechanical properties of polyaniline p. 169
  - Electrochemically Prepared Films p. 169
  - Solution Cast Films and Fibers p. 170
  - Optical properties of polyanilines p. 171
  - Circular dichroism spectra p. 173
  - Solvatochromism and thermochromism p. 175
  - References p. 175
- Chapter 6 Synthesis and properties of polythiophenes p. 179
  - Synthesis of polythiophene p. 179
  - Chemical polymerization p. 183
  - Substituted polythiophenes p. 184
  - Regioregular substituted polythiophenes p. 188
  - Polythiophenes with special functional groups p. 189
  - Chiral polythiophenes p. 190
  - Post-polymerization modification--enhancing functionality p. 191
  - Structure of Polythiophenes p. 191
  - Molecular Structure and Conformation p. 192
  - Chain Structure p. 192
  - Molecular Weight p. 192
  - Bulk Structure p. 192
  - Crystallinity, molecular order, conformation in solid state p. 192
  - Morphology and Density p. 193
  - Properties of polythiophenes p. 194
  - Conductivity p. 194
  - Mechanical Properties of Polythiophenes p. 195
  - Switching properties p. 197
  - Chemical properties p. 197
  - Optical properties of polythiophenes p. 198
- Chapter 7 Processing and device fabrication p. 207
  - Thermochromism and solvatochromism in poly(3-alkylthiophenes) p. 198
  - Chiroptical properties of optically active polythiophenes p. 199
  - References p. 201
  - Integration/fabrication after polymerization p. 207

- Solution processable CEPs p. 207
- Melt-processable CEPs p. 209
- Assembly of conducting polymers in host matrices p. 211
- Chemical polymerization p. 211
- Interfacial polymerization p. 214
- Electrochemical integration p. 214
- Device fabrication p. 219
- Fiber spinning technologies p. 219
- Printing technologies p. 221
- References p. 223
- Index p. 227
