# Table of contents

- 1 Introduction
- 1.1 Review of units and dimensions
- 1.1.1 Units
- 1.1.2 Fundamental dimensions
- 1.1.2.1 Mass and weight
- 1.1.2.2 Temperature
- 1.1.2.3 Mole
- 1.1.3 Derived dimensional quantities
- 1.1.3.1 Pressure
- 1.1.3.2 Volume
- 1.1.3.3 Equations of state
- 1.2 Dimensional equation
- 1.3 Tips for solving engineering problems
- 1.4 Conservation of mass
- 1.4.1 Law of conservation
- 1.4.2 Chemical reactions
- 1.4.3 Material balances
- 2 A Review Of Thermodynamic Concepts
- 2.1 The first law of thermodynamics
- 2.1.1 Closed systems
- 2.1.2 Steady flow systems
- 2.2 The second law of thermodynamics
- 2.2.1 Reversible processes
- 2.3 Properties
- 2.3.1 Heat capacity
- 2.3.2 Calculating the change in entropy
- 2.3.1.1 Entropy change of an ideal gas
- 2.3.3 The Gibbs and Helmholtz free energy
- 2.3.3.1 Gibbs free energy
- 2.3.3.2 Helmholtz free energy
- 2.4 The fundamental property relations
- 2.4.1 Exact differentials
- 2.5 Single phase open systems
- 2.5.1 Partial molar properties
- 2.5.1.1 Binary systems
- 2.5.1.2 Property changes of mixing
- 2.5.1.3 Ideal gas
- 2.5.1.4 Gibbs free energy of an ideal gas mixture
- 2.5.2 Pure component fugacity
- 2.5.2.1 Calculating the pure component fugacity
- 2.5.3 Fugacity of a component in a mixture
- 2.5.4 The ideal solution
- 2.6 Phase equilibrium

- **2.6.1 Pure component phase equilibrium**
- **2.6.1.1 Fugacity of a pure component as compressed liquid**
- **2.6.2 Excess properties**
- **2.6.3 Phase equilibrium in mixtures**
- **2.6.3.1 Solubility of a solid in a liquid solvent**
- **2.6.3.2 Depression of the freezing point of a solvent by a solute**
- **2.6.3.3 Equilibrium between a solid and a gas phase**
- **2.6.3.4 Solubility of a gas in a liquid**
- **2.6.3.5 Osmotic pressure**
- **2.6.3.6 Distribution of a solute between two liquid phases**
- **2.6.3.7 Vapor-liquid equilibrium**
- **2.6.3.8 Flammability limits**
- **2.6.3.9 Thermodynamics of surfaces**
- **3 Physical Properties of the Body Fluids and the Cell Membrane**
- **3.1 Body fluids**
- **3.2 Fluid compositions**
- **3.3 Capillary plasma protein retention**
- **3.4 Osmotic pressure**
- **3.4.1 Osmolarity**
- **3.4.2 Calculating the osmotic pressure**
- **3.4.3 Other factors that may affect the osmotic pressure**
- **3.5 Formation of the interstitial fluid**
- **3.6 Net capillary filtration rate**
- **3.7 Lymphatic system**
- **3.8 Solute transport across the capillary endothelium**
- **3.9 The cell membrane**
- **3.10 Ion pumps**
- **4 The Physical and Flow Properties of Blood**
- **4.1 Physical properties of blood**
- **4.2 Cellular components**
- **4.3 Rheology**
- **4.4 Relationship between shear stress and shear rate**
- **4.5 Hagan-Poiseuille equation**
- **4.6 Other useful flow relationships**
- **4.7 Rheology of blood**
- **4.8 The Casson equation**
- **4.9 Using the Casson equation**
- **4.10 The velocity profile for tube flow of a Casson fluid**
- **4.11 Tube flow of blood at low shear rates**
- **4.12 The effect of the diameter at high shear rates**
- **4.13 Marginal zone theory**
- **4.14 Using the marginal zone theory**
- **4.15 Boundary layer theory**
- **4.15.1 The flow near a wall that is set in motion**
- **4.15.2 Laminar flow of a fluid along a flat plate**
- **4.16 Generalized mechanical energy balance equation**

- **4.17 Capillary rise and capillary action**
- **4.17.1 Capillary rise**
- **4.17.2 Dynamics of capillary rise5. Solute Transport in Biological Systems**
- **5.1 Description of solute transport in biological systems**
- **5.2 Capillary properties**
- **5.3 Capillary flowrates**
- **5.4 Solute diffusion**
- **5.4.1 Fick''s first and second law**
- **5.4.2 Mass transfer in laminar boundary layer flow over a flat plate**
- **5.4.3 Mass transfer from the walls of a tube containing a fluid in laminar flow**
- **5.4.4 Mass transfer coefficient correlations**
- **5.4.5 Determining the diffusivity**
- **5.5 Solute transport by capillary filtration**
- **5.6 Solute diffusion within heterogeneous media**
- **5.6.1 Diffusion of a solute from a polymeric material**
- **5.8 The irreversible thermodynamics of membrane transport**
- **5.6.1.1 A solution valid for short contact times**
- **5.6.2 Diffusion in blood and tissue**
- **5.7 Solute permeability**
- **5.8.1 Finding Lp, Pm, and s**
- **5.8.2 Multicomponent membrane transport**
- **5.9 Transport of solutes across the capillary wall**
- **5.10 Transport**
