

# Table of contents

- **List of contributors** (p. xiii)
- **Part I Risk assessment and management in the food chain**
- **1 Introduction** (p. 3)
- **1.1 Trends in foodborne disease** (p. 3)
- **1.2 Incidence of foodborne disease** (p. 4)
- **1.3 Foodborne disease surveillance** (p. 5)
- **1.4 Emerging foodborne disease and changing patterns in epidemiology** (p. 6)
- **1.5 Control of foodborne disease** (p. 9)
- **1.6 Rationale for this book** (p. 10)
- **1.7 References** (p. 10)
- **2 Detecting pathogens in food** (p. 13)
- **2.1 Introduction** (p. 13)
- **2.2 A comparison of Quality Control and Quality Assurance** (p. 14)
- **2.3 Use of microbiology methods in a Quality Control system** (p. 14)
- **2.4 Sampling** (p. 15)
- **2.5 Use of microbiology methods in a Quality Assurance system** (p. 16)
- **2.6 Conventional microbiological techniques** (p. 19)
- **2.7 Rapid and automated methods** (p. 21)
- **2.8 Future trends** (p. 44)
- **2.9 References and further reading** (p. 45)
- **3 Modelling the growth, survival and death of bacterial pathogens in food** (p. 53)
- **3.1 Introduction** (p. 53)
- **3.2 Approaches to modelling** (p. 54)
- **3.3 Kinetic growth models** (p. 56)
- **3.4 Growth boundary models** (p. 72)
- **3.5 Death models** (p. 77)
- **3.6 Survival models** (p. 83)
- **3.7 Applications of models: product and process design, product shelf-life** (p. 83)
- **3.8 Applications of models: hygienic equipment design, HACCP systems** (p. 84)
- **3.9 Applications of models: risk assessment, food safety objectives** (p. 86)
- **3.10 Future trends** (p. 88)
- **3.11 Sources of further information and advice** (p. 91)
- **3.12 References** (p. 91)
- **4 Risk assessment and pathogen management** (p. 97)
- **4.1 Introduction** (p. 97)
- **4.2 The development of risk assessment** (p. 98)
- **4.3 Risk assessment methodology** (p. 106)
- **4.4 Risk assessment tools** (p. 114)
- **4.5 The role of risk assessment in pathogen management: food safety objectives and HACCP systems** (p. 117)
- **4.6 Future trends** (p. 121)
- **4.7 Sources of further information and advice** (p. 122)
- **4.8 References** (p. 123)
- **5 HACCP in farm production** (p. 127)

- **5.1 Introduction** (p. 127)
- **5.2 Planning the HACCP system** (p. 128)
- **5.3 Problems with hazard and CCP identification** (p. 129)
- **5.4 Good working practices** (p. 130)
- **5.5 Critical Control Points** (p. 131)
- **5.6 Documentation** (p. 133)
- **5.7 HACCP plans: the examples of meat and dairy production** (p. 134)
- **5.8 Summary: the effectiveness of HACCP on the farm** (p. 136)
- **5.9 References** (p. 140)
- **5.10 Appendix: model HACCP system for cattle** (p. 142)
- **6 Hygienic plant design and sanitation** (p. 151)
- **6.1 Introduction: hygienic design** (p. 151)
- **6.2 Level 1: the factory site** (p. 152)
- **6.3 Level 2: the factory building** (p. 153)
- **6.4 Level 3: internal barriers separating manufacturing processes** (p. 156)
- **6.5 Hygienic construction** (p. 166)
- **6.6 Hygienic equipment design** (p. 173)
- **6.7 Sanitation: introduction** (p. 176)
- **6.8 The principles of sanitation** (p. 177)
- **6.9 Sanitation chemicals** (p. 179)
- **6.10 Disinfectants** (p. 181)
- **6.11 Sanitation methodology** (p. 183)
- **6.12 Sanitation procedures** (p. 186)
- **6.13 Evaluating the effectiveness of sanitation programmes** (p. 188)
- **6.14 References and further reading** (p. 190)
- **7 Safe process design and operation** (p. 197)
- **7.1 Introduction: product and process design** (p. 197)
- **7.2 Modelling and product/process design** (p. 199)
- **7.3 Safety management tools: good manufacturing practice (GMP), HACCP and risk assessment** (p. 200)
- **7.4 Principles of process design** (p. 202)
- **7.5 Process flow and equipment** (p. 206)
- **7.6 Manufacturing areas** (p. 207)
- **7.7 Handling and processing products** (p. 215)
- **7.8 Control systems** (p. 221)
- **7.9 Conclusions** (p. 225)
- **7.10 References and further reading** (p. 226)
- **8 The effective implementation of HACCP systems in food processing** (p. 229)
- **8.1 Introduction** (p. 229)
- **8.2 HACCP methodology and implementation** (p. 231)
- **8.3 Motivation** (p. 233)
- **8.4 The knowledge required for HACCP** (p. 236)
- **8.5 Initial training and preparation** (p. 237)
- **8.6 Building knowledge and expertise** (p. 238)
- **8.7 Resources and planning** (p. 244)
- **8.8 Prerequisite programmes (PRPs)** (p. 246)

- **8.9 HACCP teams** (p. 247)
- **8.10 Hazard analysis** (p. 248)
- **8.11 HACCP implementation** (p. 249)
- **8.12 Maintenance** (p. 250)
- **8.13 HACCP and globalised production** (p. 251)
- **8.14 Future trends** (p. 252)
- **8.15 References** (p. 254)
- **9 Good practices for food handlers and consumers** (p. 257)
- **9.1 Introduction** (p. 257)
- **9.2 Food safety management in manufacturing: HACCP and GMP** (p. 262)
- **9.3 Safety management in the food service sector: GCP, ASC and SAFE** (p. 263)
- **9.4 Domestic food preparation: GDKP** (p. 263)
- **9.5 Understanding food handlers** (p. 265)
- **9.6 Improving food-handling practices** (p. 270)
- **9.7 Future trends** (p. 274)
- **9.8 References** (p. 274)
- **Part II Bacterial hazards**
- **10 Pathogenic Escherichia coli** (p. 279)
- **10.1 Introduction** (p. 279)
- **10.2 Characteristics of Escherichia coli** (p. 280)
- **10.3 Detecting Escherichia coli** (p. 286)
- **10.4 Control of pathogenic Escherichia coli in foods** (p. 288)
- **10.5 Raw material control** (p. 291)
- **10.6 Control in processing** (p. 296)
- **10.7 Final product control** (p. 300)
- **10.8 Future trends** (p. 302)
- **10.9 References and further reading** (p. 302)
- **11 Salmonella** (p. 307)
- **11.1 Introduction** (p. 307)
- **11.2 Characteristics of Salmonella** (p. 308)
- **11.3 Detecting Salmonella** (p. 315)
- **11.4 Control of Salmonella in foods** (p. 317)
- **11.5 Raw material control** (p. 321)
- **11.6 Control in processing** (p. 327)
- **11.7 Final product control** (p. 330)
- **11.8 General considerations** (p. 330)
- **11.9 Future trends** (p. 331)
- **11.10 References and further reading** (p. 331)
- **12 Listeria monocytogenes** (p. 337)
- **12.1 Introduction** (p. 337)
- **12.2 Characteristics of Listeria monocytogenes** (p. 337)
- **12.3 Detecting Listeria monocytogenes** (p. 345)
- **12.4 Control of Listeria monocytogenes in foods** (p. 346)
- **12.5 Raw material control** (p. 349)
- **12.6 Control in processing** (p. 352)
- **12.7 Final product control** (p. 356)

- **12.8 Future trends** (p. 358)
- **12.9 References** (p. 358)
- **13 Campylobacter and Arcobacter** (p. 363)
- **13.1 Introduction** (p. 363)
- **13.2 Characteristics of Campylobacter and Arcobacter species** (p. 364)
- **13.3 The nature of Campylobacter and Arcobacter infections** (p. 366)
- **13.4 Risk factors for Campylobacter** (p. 367)
- **13.5 Risk factors for Arcobacter** (p. 370)
- **13.6 Control procedures for Campylobacter** (p. 371)
- **13.7 Control procedures for Arcobacter** (p. 372)
- **13.8 Detection methods for Campylobacter** (p. 373)
- **13.9 Detection methods for Arcobacter** (p. 376)
- **13.10 Future trends** (p. 377)
- **13.11 Sources of further information and advice** (p. 379)
- **13.12 References** (p. 379)
- **14 Enterotoxin-producing Staphylococcus, Shigella, Yersinia, Vibrio, Aeromonas and Plesiomonas** (p. 385)
- **14.1 Introduction** (p. 385)
- **14.2 Characteristics of enterotoxin-producing staphylococci** (p. 385)
- **14.3 Risk factors, detection methods and control procedures** (p. 387)
- **14.4 Future trends** (p. 390)
- **14.5 Further information** (p. 390)
- **14.6 Characteristics of the genus Yersinia** (p. 390)
- **14.7 Risk factors, detection methods and control procedures** (p. 392)
- **14.8 Future trends** (p. 395)
- **14.9 Further information** (p. 396)
- **14.10 Characteristics of the genus Shigella** (p. 396)
- **14.11 Risk factors, detection methods and control procedures** (p. 398)
- **14.12 Future trends** (p. 400)
- **14.13 Further information** (p. 400)
- **14.14 Characteristics of the genus Vibrio** (p. 401)
- **14.15 Risk factors, detection methods and control procedures** (p. 403)
- **14.16 Future trends** (p. 407)
- **14.17 Further information** (p. 407)
- **14.18 Characteristics of the genera Aeromonas and Plesiomonas** (p. 407)
- **14.19 Risk factors, detection methods and control procedures** (p. 410)
- **14.20 Future trends** (p. 412)
- **14.21 Further information** (p. 412)
- **14.22 References** (p. 412)
- **15 Characteristics of spore-forming bacteria** (p. 417)
- **15.1 Introduction** (p. 417)
- **15.2 Clostridium botulinum: general characteristics** (p. 418)
- **15.3 Clostridium perfringens: general characteristics** (p. 421)
- **15.4 Bacillus spp.: general characteristics** (p. 423)
- **15.5 Methods of detection: Clostridium botulinum** (p. 427)
- **15.6 Methods of detection: Clostridium perfringens** (p. 428)

- **15.7 Methods of detection: bacillus spp.** (p. 429)
- **15.8 Control issues: Clostridium botulinum** (p. 429)
- **15.9 Control issues: Clostridium perfringens** (p. 430)
- **15.10 Control issues: bacillus spp.** (p. 430)
- **15.11 Sources of further information and advice** (p. 431)
- **15.12 References** (p. 433)
- **Part III Non-bacterial and emerging foodborne pathogens**
- **16 Viruses** (p. 439)
  - **16.1 Introduction** (p. 439)
  - **16.2 Current level of incidence** (p. 442)
  - **16.3 Conditions of growth and survival** (p. 445)
  - **16.4 Detection methods** (p. 446)
  - **16.5 Control issues** (p. 446)
  - **16.6 Sources of further information and advice** (p. 447)
  - **16.7 References** (p. 447)
- **17 Parasites: Cryptosporidium, Giardia and Cyclospora as foodborne pathogens** (p. 453)
  - **17.1 Introduction** (p. 453)
  - **17.2 Description of the organisms** (p. 453)
  - **17.3 Symptoms caused in humans** (p. 457)
  - **17.4 Infectious dose and treatment** (p. 459)
  - **17.5 Current levels of incidence** (p. 460)
  - **17.6 Conditions for growth** (p. 465)
  - **17.7 Detection methods** (p. 467)
  - **17.8 Control issues** (p. 467)
  - **17.9 The regulatory framework** (p. 470)
  - **17.10 Sources of further information and advice** (p. 472)
  - **17.11 References** (p. 472)
- **18 Toxigenic fungi** (p. 479)
  - **18.1 Introduction** (p. 479)
  - **18.2 Aflatoxins: occurrence and significance** (p. 480)
  - **18.3 Control measures** (p. 482)
  - **18.4 Ochratoxin A: occurrence and significance** (p. 483)
  - **18.5 Control measures** (p. 484)
  - **18.6 Patulin: occurrence and significance** (p. 484)
  - **18.7 Control measures** (p. 485)
  - **18.8 Fumonisin: occurrence and significance** (p. 485)
  - **18.9 Control measures** (p. 485)
  - **18.10 Other mycotoxins** (p. 486)
  - **18.11 Sources of further information and advice** (p. 487)
  - **18.12 References** (p. 487)
- **19 Mycobacterium paratuberculosis** (p. 489)
  - **19.1 Introduction** (p. 489)
  - **19.2 Mycobacterium paratuberculosis and Crohn's disease** (p. 490)
  - **19.3 Mycobacterium paratuberculosis in foods** (p. 491)
  - **19.4 Detection methods** (p. 495)

- **19.5 Control measures** (p. 496)
- **19.6 Sources of further information and advice** (p. 497)
- **19.7 References** (p. 497)
- **20 Chronic sequelae of foodborne infections** (p. 501)
- **20.1 Introduction** (p. 501)
- **20.2 Aeromonas** (p. 503)
- **20.3 Brucella spp.** (p. 503)
- **20.4 Campylobacter spp.** (p. 503)
- **20.5 Enterohaemorrhagic Escherichia coli** (p. 504)
- **20.6 Enterobacter Sakazakii** (p. 505)
- **20.7 Helicobacter pylori** (p. 505)
- **20.8 Listeria monocytogenes** (p. 506)
- **20.9 Mycobacterium paratuberculosis** (p. 506)
- **20.10 Nanobacteria** (p. 507)
- **20.11 Non-Typhi Salmonella** (p. 508)
- **20.12 Vibrio vulnificus** (p. 508)
- **20.13 Yersinia enterocolitica** (p. 508)
- **20.14 Toxoplasma gondii** (p. 509)
- **20.15 Trematodes** (p. 509)
- **20.16 Taenia solium** (p. 510)
- **20.17 Trichinella spiralis** (p. 511)
- **20.18 Viral hepatitis A virus** (p. 511)
- **20.19 References** (p. 512)
- **Index** (p. 515)
