

- Foreword p. viii
- Preface p. ix
- Task VIII Participants p. x
- List of Contributors p. xi
- Acknowledgements p. xii
- Comprehensive Summary
- Objective p. xiii
- Background and concept of VLS-PV p. xiii
- VLS-PV case studies p. xiii
- Scenario studies p. xiv
- Understandings p. xiv
- Recommendations p. xiv
- Executive Summary
- A. Background and concept of VLS-PV p. xv
- A.1 World energy issues p. xv
- A.2 Environmental issues p. xvi
- A.3 An overview of photovoltaic technology p. xvii
- A.3.1 Technology trends p. xvii
- A.3.2 Experiences in operation and maintenance of large-scale PV systems p. xviii
- A.3.3 Cost trends p. xviii
- A.3.4 Added values of PV systems p. xix
- A.4 World irradiation database p. xx
- A.5 Concept of VLS-PV system p. xx
- A.5.1 Availability of desert area for PV technology p. xx
- A.5.2 VLS-PV concept and definition p. xxi
- A.5.3 Potential of VLS-PV: advantages p. xxii
- A.5.4 Synthesis in a scenario for the viability of VLS-PV development p. xxii
- B. VLS-PV case studies p. xxiv
- B.1 General information p. xxiv
- B.2 Preliminary case study of VLS-PV systems in world deserts p. xxiv
- B.3 Case studies on the Gobi Desert from a life-cycle viewpoint p. xxvii
- B.4 Case studies on the Sahara Desert p. xxx
- B.5 Case studies on the Middle East desert p. xxxi
- C. Scenario studies and recommendations p. xxxiii
- C.1 Sustainable growth of the VLS-PV system concept p. xxxiii
- C.2 Possible approaches for the future p. xxxiv
- C.3 Financial and organizational sustainability p. xxxvi
- C.4 Recommendations p. xxxvii
- C.4.1 General understandings p. xxxvii
- C.4.2 Recommendations on a policy level p. xxxviii
- C.4.3 Checklist for specific stakeholders p. xxxviii
- Part I Background and Concept of VLS-PV
- 1. World energy issues p. 3
- 1.1 Long-term trend in world primary energy supply and demand p. 3
- 1.2 Potential of renewables p. 5
- 1.3 Trends in the PV market p. 7

- 1.3.1 PV module production and PV system introduction in the world p. 7
- 1.3.2 Perspectives of the PV market p. 8
- References p. 10
- 2. Environmental issues p. 11
- 2.1 Global environmental issues p. 11
- 2.1.1 Observed change in the global climate system p. 11
- 2.1.2 Projections of the future climate p. 13
- 2.1.3 Projected influences by climate warming p. 14
- 2.1.4 Recent progress for mitigating the projected future climate p. 15
- 2.2 Regional and local environmental issues p. 18
- 2.2.1 Acid rain p. 18
- 2.2.2 Desertification and land degradation p. 18
- 2.2.3 Biodiversity and natural systems p. 19
- 2.3 Expected impacts and approaches for VLS-PV p. 21
- References p. 21
- 3. An overview of photovoltaic technology p. 22
- 3.1 Basic characteristics of photovoltaic technology p. 22
- 3.2 Trends in government budget relating to PV programmes in three regions p. 22
- 3.3 Trends in solar-cell technology p. 23
- 3.3.1 Crystalline silicon solar cells p. 23
- 3.3.2 Thin-film solar cells p. 25
- 3.3.3 Technologies in perspective p. 30
- 3.4 Trends in PV system technology p. 31
- 3.4.1 Technologies in perspective p. 31
- 3.4.2 Estimation of electricity production from PV systems p. 40
- 3.5 Trends in power transmission technology p. 41
- 3.5.1 A.C. power transmission p. 41
- 3.5.2 D.C. power transmission p. 42
- 3.6 Experiences in operation and maintenance of large-scale PV systems p. 43
- 3.6.1 Operation and maintenance cost information p. 43
- 3.6.2 Long-term performance p. 44
- 3.7 Cost trends p. 48
- 3.7.1 Recent trends in PV system and component prices p. 48
- 3.7.2 Trends in PV module costs p. 50
- 3.7.3 Long-term cost perspectives p. 52
- 3.8 Added values of PV systems p. 55
- 3.8.1 Research activities on added values of PV systems in IEA/PVPS p. 55
- 3.8.2 A case study for added values of PV systems--'utility benefits' p. 55
- References p. 59
- 4. World irradiation database p. 61
- 4.1 The JWA World Irradiation Database p. 61
- 4.2 Negev Radiation Survey p. 61
- 4.3 WRDC solar radiation and radiation balance data p. 62
- 4.4 BSRN: Baseline Surface Radiation Network p. 62
- 4.5 NOAA NCDC GLOBALSOD: global daily WMO weather station data p. 63
- 4.6 METEONORM v4.0 (edition 2000) p. 63

- 4.7 SeaWiFS surface solar irradiance p. 65
- 4.8 LaRC Surface Solar Energy dataset (SSE) p. 65
- 4.9 ISCCP datasets p. 65
- References p. 66
- Website addresses p. 66
- 5. Concept of VLS-PV p. 67
- 5.1 Availability of desert areas for PV technology p. 67
- 5.1.1 Availability of world deserts p. 67
- 5.1.2 Estimation of PV system potentials utilizing world deserts p. 68
- 5.2 VLS-PV concept and definition p. 68
- 5.3 Potential of VLS-PV: advantages and disadvantages p. 70
- 5.4 Synthesis in a scenario for the viability of VLS-PV development p. 70
- 5.5 Market trends relevant to VLS-PV p. 71
- 5.5.1 End-users, stakeholders and needs p. 71
- 5.5.2 Market trends in non-OECD countries p. 72
- 5.5.3 Market trends in OECD countries p. 72
- References p. 72
- Part II VLS-PV Case Studies
- 6. General information p. 75
- 6.1 Distribution of the deserts p. 75
- 6.1.1 Desert areas of the world p. 75
- 6.1.2 Major deserts in the world p. 75
- 6.2 Major indicators of desert areas and countries p. 78
- 6.2.1 General data p. 78
- 6.2.2 Energy data p. 80
- 6.3 Methodology of the major analysis technique p. 84
- 6.3.1 Methodology of life-cycle assessment of PV technology p. 84
- 6.3.2 Methodology of I/O analysis of PV technology p. 86
- References p. 88
- 7. A preliminary case study of VLS-PV systems in world deserts p. 89
- 7.1 General assumptions p. 89
- 7.1.1 World deserts relevant to this case study p. 89
- 7.1.2 VLS-PV design and configuration p. 89
- 7.1.3 Annual power generation p. 90
- 7.2 Estimation of cost components p. 92
- 7.2.1 Initial costs p. 92
- 7.2.2 Annual operation and maintenance costs p. 93
- 7.3 Results and discussion p. 95
- 7.3.1 Total annual costs p. 95
- 7.3.2 Generation costs p. 95
- 7.4 Conclusion p. 95
- References p. 102
- 8. Case studies on the Gobi Desert from a life-cycle viewpoint p. 103
- 8.1 Installation site of VLS-PV system in this study p. 103
- 8.1.1 General information for China p. 103
- 8.1.2 Climate data used in this study p. 106

- 8.2 Assumptions for case study p. 106
- 8.2.1 Rough configuration of VLS-PV system p. 106
- 8.2.2 Life-cycle framework of VLS-PV system p. 107
- 8.2.3 Data preparation for this case study p. 108
- 8.3 System design p. 109
- 8.3.1 Array design p. 109
- 8.3.2 Array support structure and foundation p. 110
- 8.3.3 Wiring p. 110
- 8.3.4 Labour requirements and fuel consumption for construction p. 111
- 8.3.5 Summary of system design p. 111
- 8.4 Operation and maintenance of VLS-PV system p. 111
- 8.5 Life-cycle analysis of the VLS-PV system p. 112
- 8.5.1 Life-cycle cost analysis p. 112
- 8.5.2 Energy and CO₂ emission analysis p. 114
- 8.5.3 Sensitivity analysis: PV module efficiency, interest rate and PV module degradation p. 115
- 8.6 Conclusion p. 117
- References p. 117
- 9. Case studies on the Sahara Desert p. 118
- 9.1 Network concept p. 118
- 9.1.1 Long-distance transmission technologies p. 118
- 9.1.2 Grid integration issues p. 119
- 9.1.3 Pre-case study of the Sahara Desert case p. 121
- 9.2 Technology transfer p. 124
- 9.2.1 General information on Morocco p. 125
- 9.2.2 Analysis of PV module fabrication costs p. 127
- 9.2.3 Analysis of socio-economic impact of transferring a PV module manufacturing facility p. 129
- 9.3 Conclusions p. 133
- References p. 134
- 10. Case studies for the Middle East, including sun-tracking non-concentrator, and concentrator photovoltaics p. 135
- 10.1 The Negev Desert: where and why? p. 135
- 10.2 A conventional PV system: what could it do? p. 136
- 10.2.1 Energy output p. 136
- 10.2.2 Annual value of PV electricity at Sede Boqer p. 136
- 10.2.3 Land requirements p. 137
- 10.2.4 Load matching p. 138
- 10.2.5 Growth factors p. 138
- 10.2.6 Conclusions regarding a static non-concentrating VLS-PV system in the Negev Desert p. 139
- 10.3 Sun-tracking p. 139
- 10.3.1 Energy output p. 139
- 10.3.2 Load matching p. 139
- 10.3.3 Land requirements p. 141
- 10.3.4 Sun-tracking conclusions p. 141

- 10.4 A concentrator photovoltaic system p. 142
- 10.4.1 What is it and what are its possible advantages? p. 142
- 10.4.2 Energy output p. 143
- 10.4.3 Land requirements p. 143
- 10.4.4 Load matching with a CPV system p. 144
- 10.5 Cost estimation for concentrator PV system p. 145
- 10.5.1 Basic assumptions p. 145
- 10.5.2 Workforce costs p. 145
- 10.5.3 Cost of material-handling equipment p. 146
- 10.5.4 Cost of site preparation p. 146
- 10.5.5 Cost of materials for the CPV units p. 146
- 10.5.6 Total plant cost estimate p. 146
- 10.5.7 Additional costs p. 147
- 10.5.8 Cost of financing p. 147
- 10.5.9 The D.C. option p. 147
- 10.5.10 Operation and maintenance costs p. 147
- 10.5.11 Cell degradation p. 147
- 10.6 Discussion and conclusions p. 148
- References p. 150
- Part III Scenario Studies and Recommendations
- 11. Introduction: conclusions of Parts I and II p. 153
- 11.1 Background and concept of VLS-PV (Part I) p. 153
- 11.1.1 Energy and environmental issues p. 153
- 11.1.2 Overview of PV technology and relative information p. 154
- 11.1.3 Concept of VLS-PV p. 155
- 11.2 Lessons learned from VLS-PV case studies (Part II) p. 155
- 11.2.1 Indicative electricity cost of VLS-PV p. 156
- 11.2.2 Energy payback time and CO₂ emission from VLS-PV p. 157
- 11.2.3 Network concept and socio-economic effects of VLS-PV p. 158
- 11.2.4 Technology options for VLS-PV p. 158
- 11.3 General conclusions p. 159
- 12. Scenario studies p. 160
- 12.1 Sustainable growth of the VLS-PV system concept p. 160
- 12.1.1 Concept of the sustainable development scheme of VLS-PV p. 160
- 12.1.2 A preliminary economic analysis of the VLS-PV development scheme p. 164
- 12.1.3 Expected approaches for the sustainable growth of VLS-PV p. 170
- 12.1.4 Conclusions p. 172
- 12.2 Possible approaches for the future p. 172
- 12.2.1 Basic concept and issues for VLS-PV development p. 173
- 12.2.2 VLS-PV development scenario p. 176
- 12.2.3 A promising project proposal for 'S-0: R&D stage' in Mongolia p. 180
- 12.2.4 Conclusions p. 183
- 12.3 Financial and organizational sustainability p. 184
- 12.3.1 General assumptions p. 184
- 12.3.2 Funding in a phased approach p. 185
- 12.3.3 Costs of a 100 MW demonstration plant in Egypt p. 186

- 12.3.4 Conclusions and recommendations p. 189
- References p. 189
- 12.4 Appendix p. 190
- A Investment and cashflow for a 100 MW plant in Egypt, Scenario I (1 000 EUR) p. 190
- B Investment and cashflow for a 100 MW plant in Egypt, Scenario II (1 000 EUR) p. 191
- 13. Recommendations p. 192
- 13.1 Introduction p. 192
- 13.2 General understandings p. 192
- 13.3 Recommendations on a policy level p. 193
- 13.4 Checklist for specific stakeholders p. 193
