

- Foreword p. vii
- 1. Steady State Problems of Elliptic Type Manuel Pastor and Pablo Mira p. 1
- 2. Transient Problems of Parabolic Type Manuel Pastor and Jose Antonio Fernandez Merodo p. 23
- 3. Constitutive Modelling for Rate-independent Soils: A Review Claudio Tamagnini and Gioacchino Viggiani p. 41
- 4. Coupling Equations for Water Saturated and Partially Saturated Geomaterials Bernhard A. Schrefler and Lorenzo Sanavia p. 83
- 5. Continuum Damage Modelling and Some Computational Issues Gilles Pijaudier-Cabot and Ludovic Jason p. 99
- 6. Non Linear Problems: An Introduction Pablo Mira and Manuel Pastor p. 127
- 7. Small Strain vs Large Strain Formulation in Computational Mechanics Rene Chambon p. 145
- 8. Implicit Integration of Constitutive Equations in Computational Plasticity Claudio Tamagnini and Riccardo Castellanza and Roberto Nova p. 159
- 9. Non Linear Problems: Advanced Techniques Pablo Mira and Manuel Pastor p. 177
- 10. A Finite Element Model for Water Saturated and Partially Saturated Geomaterials Lorenzo Sanavia and Bernhard A. Schrefler p. 191
- 11. Alternative Formulations in Soil Dynamics Manuel Pastor and Mokhtar Mabssout p. 207
- 12. Objective Modelling of Strain Localization Milan Jirasek p. 227
- 13. Numerical Modelling of Strong Discontinuities Milan Jirasek p. 241
- 14. Practical Aspects of the Finite Element Method Manuel Pastor and Pablo Mira and Jose Antonio Fernandez Merodo p. 255
- 15. Mechanical Effects of Chemical Degradation of Bonded Geomaterials in Boundary Value Problems Riccardo Castellanza and Roberto Nova and Claudio Tamagnini p. 277
- 16. Finite Element Modelling of Landslides Jose Antonio Fernandez Merodo and Manuel Pastor p. 301
- 17. Modelling of Debris Flows and Flow Slides Manuel Pastor and Jose Antonio Fernandez Merodo and Maria Isabel Herreros and Elena Gonzalez and Pablo Mira and Manuel Quecedo p. 321
- Index p. 341
