

Table of contents

- **Preface** (p. 15)
- **Foreword** (p. 17)
- **Chapter 1 Analysis of the Metrological Requirements Needed to Ensure Quality** (p. 19)
 - **1.1 Introduction** (p. 19)
 - **1.2 Definition of the objectives** (p. 21)
 - **1.3 Choice of the method of measurement** (p. 22)
 - **1.3.1 Accounting for the selection of the method** (p. 22)
 - **1.3.2 Defining the method and the principle to implement** (p. 23)
 - **1.4 Choice of the means of measurement** (p. 24)
 - **1.4.1 Introduction** (p. 24)
 - **1.4.2 Analysis of what is already available** (p. 25)
 - **1.4.3 Assessment and acquisition of material** (p. 26)
 - **1.4.4 Technical criteria** (p. 27)
 - **1.4.4.1 Basic characteristics** (p. 27)
 - **1.4.4.2 Comportment towards influence quantities** (p. 27)
 - **1.4.4.3 Durability of the instruments used** (p. 27)
 - **1.4.4.4 Homogeneity of the supply of instruments** (p. 28)
 - **1.4.4.5 Quality of the supplier's service** (p. 28)
 - **1.4.4.6 Adaptation of the instrument** (p. 28)
 - **1.4.4.7 Possibility of traceability** (p. 29)
 - **1.4.4.8 Computerization and the speed of taking measurements** (p. 29)
 - **1.4.4.9 Ergonomics** (p. 29)
 - **1.4.4.10 Capability of measuring instruments** (p. 29)
 - **1.4.5 Economic criteria** (p. 30)
 - **1.4.6 Grid of the analysis of the choice** (p. 31)
 - **1.4.6.1 Stage 1: primary technical requirements (unavoidably necessary)** (p. 31)
 - **1.4.6.2 Stage 2: secondary technical requirements (desirable)** (p. 31)
 - **1.4.7 Technical assistance for users of measuring instruments** (p. 33)
 - **1.4.7.1 The EXERA (France)** (p. 33)
 - **1.4.7.2 VDI/VDE-GMA (Germany)** (p. 34)
 - **1.5 The traceability of the measurements** (p. 36)
 - **1.5.1 The necessity of traceability of the measurements** (p. 36)
 - **1.5.2 Calibration requirements** (p. 38)
 - **1.5.3 The selection of standards** (p. 39)
 - **1.6 Conclusion** (p. 42)
- **Chapter 2 Organization of Metrology: Industrial, Scientific, Legal** (p. 43)
 - **2.1 A metrological organization: why?** (p. 43)
 - **2.2 Metrology: how?** (p. 45)
 - **2.3 Scientific and technical metrology** (p. 47)
 - **2.3.1 The BIPM** (p. 48)
 - **2.3.2 Results of the international activities** (p. 50)
 - **2.3.3 Regional organizations** (p. 51)

- **2.3.3.1 Euromet** (p. 51)
- **2.3.3.2 European Cooperation for Accreditation (EA)** (p. 54)
- **2.3.3.3 Accreditation procedure** (p. 58)
- **2.3.4 Organization at the national level** (p. 59)
 - **2.3.4.1 The Laboratoire National de Metrologie et d'Essais (LNE)** (p. 59)
 - **2.3.4.2 The Italian national calibration system (SNT)** (p. 63)
 - **2.3.4.3 The Swiss national calibration system** (p. 65)
- **2.4 Legal Metrology** (p. 67)
 - **2.4.1 Scope of legal metrology** (p. 67)
 - **2.4.2 The International Organization of Legal Metrology (OIML)** (p. 68)
 - **2.4.3 The European level** (p. 71)
 - **2.4.3.1 European Union harmonization** (p. 71)
 - **2.4.3.2 WELMEC** (p. 71)
 - **2.4.3.3 Other regional bodies** (p. 73)
 - **2.4.4 At national level** (p. 73)
 - **2.4.4.1 Legal metrology in Italy** (p. 73)
 - **2.4.4.2 Legal metrology in Switzerland** (p. 74)
 - **2.4.4.3 Legal metrology in France** (p. 76)
- **Chapter 3 Mastering Measurement Processes Approach to the Setting up of a Metrology Function** (p. 79)
 - **3.1 What to do at the beginning?** (p. 79)
 - **3.2 Goals and role of the measurement management system - metrological function** (p. 80)
 - **3.3 The measurement processes** (p. 86)
 - **3.3.1 Conception and development of a new measurement process** (p. 86)
 - **3.3.1.1 Analysis of the requirements** (p. 86)
 - **3.3.1.2 Transcription of the characteristics of the product in "measurand" form or "characteristics to be measured" form** (p. 87)
 - **3.3.1.3 The development of a measurement process can be managed as a project** (p. 87)
 - **3.3.2 Exploitation of a valid process** (p. 88)
 - **3.3.3 Continuous improvement of measurement processes** (p. 88)
 - **3.4 Management of the measuring equipment (metrological confirmation)** (p. 89)
 - **3.4.1 Analysis of the requirement and selection of the measuring equipments** (p. 91)
 - **3.4.1.1 Technical requirements** (p. 91)
 - **3.4.1.2 Economic and commercial conditions** (p. 93)
 - **3.4.1.3 Assessment of the measuring equipment** (p. 93)
 - **3.4.2 Receiving the measuring equipment and putting it into service** (p. 93)
 - **3.4.2.1 Compliance with the order** (p. 94)
 - **3.4.2.2 Identification of the measuring equipment** (p. 94)
 - **3.4.2.3 Inventory (description)** (p. 94)
 - **3.4.2.4 Technical dossier of the equipment** (p. 94)
 - **3.4.2.5 Technical documentation** (p. 94)
 - **3.4.2.6 Basic definitions** (p. 94)

- **3.4.3 Calibration and verification operations** (p. 97)
- **3.4.3.1 Calibration or verification program** (p. 99)
- **3.4.3.2 Calibration or verification intervals** (p. 99)
- **3.4.3.3 Supervision of the measuring equipment** (p. 100)
- **3.4.4 Fitness for use of measuring equipment** (p. 100)
- **3.4.4.1 Freedom from bias, repeatability, stability** (p. 100)
- **3.4.4.2 Maximum permissible errors** (p. 101)
- **3.4.4.3 Demands for an assurance of the quality** (p. 101)
- **3.5 Setting up a metrological structure within the firm** (p. 102)
- **3.5.1 Analysis of the metrological requirements and setting up standards** (p. 102)
- **3.5.2 Traceability of the measuring instrument(s) to the firm's reference standards** (p. 104)
- **3.5.3 Traceability of the firm's reference standards to the SI** (p. 104)
- **3.6 Suggested approach for setting up a metrology function** (p. 105)
- **3.7 Bibliography** (p. 106)
- **Chapter 4 Handling of a Bank of Measuring Instruments** (p. 109)
- **4.1 Acquaintance with the bank** (p. 110)
- **4.1.1 Inventory** (p. 110)
- **4.1.2 Identification** (p. 110)
- **4.2 Metrological policy of the firm** (p. 113)
- **4.2.1 Objective and commitment of the firm's management** (p. 113)
- **4.2.2 Plan of actions to launch** (p. 113)
- **4.2.3 Awareness, training and vocabulary** (p. 113)
- **4.2.4 Selection of the material to be followed periodically** (p. 114)
- **4.3 Drafting of the documents** (p. 115)
- **4.3.1 Codification of the documents** (p. 115)
- **4.3.2 Work instructions** (p. 116)
- **4.3.3 Result-recording documents** (p. 117)
- **4.3.4 Other documents** (p. 118)
- **4.4 Physical handling of the measuring instruments** (p. 119)
- **4.4.1 Receipt** (p. 119)
- **4.4.2 Transfer** (p. 120)
- **4.4.2.1 Traceability** (p. 120)
- **4.4.2.2 Transfer** (p. 120)
- **4.4.2.3 Precautions** (p. 121)
- **4.4.3 Storing and environment** (p. 121)
- **4.4.4 Maintenance** (p. 122)
- **4.5 Follow-up of the measuring instruments over time** (p. 123)
- **4.5.1 Periodicity of the follow-up** (p. 123)
- **4.5.2 Campaign of recall** (p. 124)
- **4.5.3 Follow-up of the results** (p. 125)
- **4.6 Software for the handling of the means of measurements** (p. 125)
- **Chapter 5 Traceability to National Standards** (p. 127)
- **5.1 Introduction** (p. 127)
- **5.2 Definitions** (p. 127)

- **5.2.1 Traceability** (p. 127)
- **5.2.2 Calibration** (p. 128)
- **5.2.3 Verification** (p. 129)
- **5.3 Traceability chains** (p. 129)
- **5.4 Traceability** (p. 131)
- **5.5 Calibration** (p. 132)
- **5.5.1 Calibration in an accredited laboratory** (p. 132)
- **5.5.2 Calibration in a non-accredited laboratory** (p. 132)
- **5.6 Verification** (p. 133)
- **5.6.1 Verification in an accredited laboratory and in its accreditation scope** (p. 133)
- **5.6.2 Verification in a non-accredited laboratory or out of the accreditation scope** (p. 133)
- **5.7 Use of calibration and verification results** (p. 133)
- **5.7.1 Use of the results of a calibration** (p. 134)
- **5.7.2 Use of the results of a verification** (p. 134)
- **5.8 Particular cases** (p. 135)
- **5.8.1 "Self-calibrating" or "self-gauging" measuring instruments** (p. 135)
- **5.8.2 Complex instruments in which components/equipments and software are narrowly combined and large measurement ranges are covered for complex quantities** (p. 136)
- **5.9 Metrology in chemistry and physical methods of chemical analysis** (p. 136)
- **5.9.1 Traceability in metrology in chemistry** (p. 137)
- **5.9.2 Influence of the principle of the method** (p. 139)
- **5.9.2.1 Absolute methods** (p. 139)
- **5.9.2.2 Relative method** (p. 140)
- **5.9.2.3 Comparative method** (p. 140)
- **5.9.3 "Documentary" traceability** (p. 141)
- **5.9.4 Control of the reference materials** (p. 143)
- **5.9.5 Conclusion** (p. 145)
- **5.10 Assessment of traceability** (p. 145)
- **5.11 Bibliography** (p. 146)
- **Chapter 6 Calibration Intervals and Methods for Monitoring the Measurement Processes** (p. 149)
- **6.1 Normative requirements** (p. 149)
- **6.2 Methods for monitoring the instruments in use - general criteria** (p. 150)
- **6.2.1 First method: metrological redundancies** (p. 150)
- **6.2.2 Second method: checking the coherence of the results** (p. 151)
- **6.2.3 Third method: "monitoring standards" and statistical supervision of the measurement processes** (p. 152)
- **6.2.3.1 Statistical control of the measurement processes** (p. 152)
- **6.2.3.2 Control charts** (p. 154)
- **6.2.3.3 Use of the monitoring methods** (p. 157)
- **6.3 The determination of the calibration intervals** (p. 158)
- **6.4 Bibliography** (p. 161)

- **Chapter 7 Measurements and Uncertainties** (p. 163)
- **7.1 Introduction** (p. 163)
- **7.2 Measurement of physical quantity** (p. 164)
- **7.3 Analysis of the measurement process** (p. 166)
 - **7.3.1 The cause and effect diagram method** (p. 166)
 - **7.3.2 Using the list published in the GUM (section 3.3.2)** (p. 167)
 - **7.3.3 Errors** (p. 168)
 - **7.3.4 Cutting down the errors** (p. 169)
 - **7.3.4.1 Cutting down random errors by repeating measurements** (p. 170)
 - **7.3.4.2 Cutting down systematic errors by applying corrections** (p. 171)
- **7.4 Modeling of the measurement process** (p. 172)
 - **7.4.1 Measurement procedure and model of the measurement process** (p. 172)
 - **7.4.2 An essential stage for the assessment of uncertainty: modeling the measurement** (p. 173)
- **7.5 Assessment of the uncertainty of the input quantities** (p. 174)
 - **7.5.1 Type A methods** (p. 175)
 - **7.5.2 Type B methods** (p. 176)
 - **7.5.3 Comparing the Type A and Type B methods** (p. 179)
- **7.6 Calculating the combined uncertainty on the result** (p. 180)
 - **7.6.1 Situation when all the input quantities are independent** (p. 180)
 - **7.6.1.1 Situation when the input quantities are independent and the model is a sum** (p. 180)
 - **7.6.1.2 Situation when the model is a product** (p. 181)
 - **7.6.2 Situation when the input quantities are dependent** (p. 181)
 - **7.6.2.1 Assessment of the covariances by assessing a coefficient of correlation $r(x_{[subscript i]}, x_{[subscript j]})$** (p. 181)
 - **7.6.2.2 Assessment of the covariances by calculating the terms of covariance** (p. 181)
 - **7.6.2.3 Assessment of the covariances by considering the terms common to two input quantities** (p. 181)
- **7.7 Use of the performances of the method (repeatability and freedom of bias) to assess the uncertainty of the measurement result** (p. 183)
 - **7.7.1 Intra- or interlaboratory approaches** (p. 184)
 - **7.7.2 Intra-laboratory approach** (p. 185)
 - **7.7.3 Interlaboratory approach** (p. 186)
 - **7.7.4 Data processing for intra- and interlaboratory approaches** (p. 187)
 - **7.7.4.1 Assessment of the repeatability and the reproducibility** (p. 187)
 - **7.7.4.2 Assessment of the freedom of bias (trueness)** (p. 188)
 - **7.7.4.3 Evaluation of the linearity** (p. 189)
 - **7.7.4.4 The terms [characters not reproducible]** (p. 189)
- **7.8 Reporting of the measurement result** (p. 189)
- **7.9 Example** (p. 190)
- **7.10 Bibliography** (p. 193)
- **Chapter 8 The Environment of Measuring** (p. 195)
 - **8.1 The premises** (p. 196)

- **8.1.1 Ambient temperature** (p. 197)
- **8.1.2 Relative humidity** (p. 198)
- **8.1.3 Handling of the air conditioning systems** (p. 199)
- **8.1.4 Power network** (p. 199)
- **8.1.5 Radioelectric disturbances** (p. 199)
- **8.1.6 Measurements on-site** (p. 200)
- **8.2 The personnel** (p. 200)
 - **8.2.1 The connection of metrology function** (p. 200)
 - **8.2.2 Staff involved in the metrology function** (p. 201)
 - **8.2.3 The qualification of the personnel** (p. 202)
- **8.3 The documentation** (p. 202)
 - **8.3.1 Filing of the documents** (p. 202)
 - **8.3.1.1 Documents dealing with the quality system** (p. 202)
 - **8.3.1.2 Records regarding quality** (p. 203)
 - **8.3.2 Management of the documents** (p. 204)
- **8.4 Bibliography** (p. 205)
- **8.5 Appendix** (p. 206)
- **Chapter 9 About Measuring** (p. 209)
 - **9.1 Preliminary information** (p. 209)
 - **9.1.1 Physical quantity** (p. 209)
 - **9.1.2 The object to be measured** (p. 210)
 - **9.1.3 Field of measurement** (p. 210)
 - **9.1.4 Four types of uses of measuring instruments** (p. 211)
 - **9.1.5 Influencing quantities** (p. 212)
 - **9.2 Choice of a measuring principle** (p. 213)
 - **9.2.1 Differential measurement** (p. 214)
 - **9.2.2 Direct measurement** (p. 214)
 - **9.2.3 Indirect measurement** (p. 214)
 - **9.3 Practicing in metrology** (p. 215)
 - **9.3.1 Implementing the instruments** (p. 216)
 - **9.3.2 Precautions before measuring** (p. 216)
 - **9.3.3 Measurements** (p. 216)
 - **9.3.4 Variations and their sign** (p. 217)
 - **9.3.5 The time factor** (p. 218)
 - **9.4 Expression of the results** (p. 218)
 - **9.4.1 Graphs** (p. 220)
 - **9.4.2 Histograms** (p. 220)
 - **9.5 What qualities does a metrologist require?** (p. 221)
 - **9.5.1 Be inquisitive** (p. 222)
 - **9.5.2 Be tidy and methodical** (p. 222)
 - **9.5.3 Be open to doubt** (p. 222)
 - **9.5.4 Be observant** (p. 222)
 - **9.5.5 Be honest** (p. 223)
- **Chapter 10 Organization of Metrology at Solvay Research and Technology** (p. 225)
 - **10.1 Presentation of the company** (p. 225)

- **10.2 Organization of the metrology sector** (p. 226)
- **10.2.1 Creation** (p. 226)
- **10.2.2 Missions** (p. 226)
- **10.2.3 Organization** (p. 226)
- **10.2.4 Geographic localization of the activities** (p. 227)
- **10.2.5 Composition of the bank of measuring equipment** (p. 227)
- **10.3 Metrology** (p. 228)
- **10.3.1 Identification** (p. 228)
- **10.3.2 Connection of the standards** (p. 228)
- **10.3.3 Periodicity of the calibrations** (p. 229)
- **10.3.4 Calibration operations** (p. 229)
- **10.3.5 Documentation of the calibration results** (p. 230)
- **10.3.6 Verdict of the metrological confirmation** (p. 231)
- **10.3.7 Indication of the state of the calibrations** (p. 231)
- **10.3.8 Personnel and subcontracting** (p. 232)
- **Chapter 11 Metrology within the Scope of the ISO 9001 Standard** (p. 233)
- **11.1 Introduction** (p. 233)
- **11.2 Introduction to the evolution of the standard** (p. 234)
- **11.2.1 The concept of continuous improvement** (p. 234)
- **11.2.2 The process approach** (p. 235)
- **11.3 Measurement control process** (p. 236)
- **11.4 The ISO 9001 (2000) standard step-by-step** (p. 238)
- **11.5 Conclusion** (p. 245)
- **Chapter 12 Training for the Metrology Professions in France** (p. 247)
- **12.1 The metrology function in a firm's strategy** (p. 247)
- **12.2 Metrology profession** (p. 248)
- **12.2.1 Metrological engineer** (p. 249)
- **12.2.2 Metrological technician** (p. 249)
- **12.2.3 Metrological operator** (p. 250)
- **12.3 Initial training** (p. 250)
- **12.3.1 Schools for engineers** (p. 250)
- **12.3.2 Courses for higher level technicians** (p. 251)
- **12.3.3 Vocational high schools** (p. 251)
- **12.4 Continuing education** (p. 251)
- **12.5 Long-lasting training courses** (p. 253)
- **12.6 The teaching of metrology in secondary schools** (p. 265)
- **12.7 Prospects for the development of long-lasting training courses** (p. 265)
- **12.8 Bibliography** (p. 266)
- **The Authors** (p. 267)
- **Index** (p. 269)
