

- **Preface** (p. XI)
- **1 Introduction** (p. 1)
- **1.1 Learning from the Experiences of Microelectronics** (p. 1)
- **1.2 The Advantages of Miniaturizing Systems for Chemical Analysis** (p. 2)
- **1.3 From Concept to [mu]TAS** (p. 4)
- **1.4 References** (p. 7)
- **2 Clean Rooms** (p. 9)
- **3 Microfluidics--Theoretical Aspects** (p. 13)
- **3.1 Fluids and Flows** (p. 14)
- **3.2 Transport Processes** (p. 20)
- **3.2.1 Types of Transport** (p. 20)
- **3.2.1.1 Convection** (p. 21)
- **3.2.1.2 Migration** (p. 22)
- **3.2.1.3 Diffusion** (p. 22)
- **3.2.1.4 Dispersion** (p. 26)
- **3.3 System Design** (p. 27)
- **3.3.1 Laminar Flow and Diffusion in Action** (p. 27)
- **3.4 An Application: Biological Fluids** (p. 35)
- **3.5 References** (p. 36)
- **4 Microfluidics--Components** (p. 39)
- **4.1 Valves and Pumps** (p. 39)
- **4.1.1 Moving Liquids by Electroosmosis** (p. 46)
- **4.1.2 Mixers** (p. 50)
- **4.2 Injecting, Dosing, and Metering** (p. 54)
- **4.3 Temperature Measurement in Microfluidic Systems** (p. 58)
- **4.3.1 Microreactors** (p. 59)
- **4.3.2 Temperature Sensors for Microsystems** (p. 60)
- **4.3.3 Resistance Temperature Detectors** (p. 60)
- **4.3.3.1 Metals** (p. 60)
- **4.3.3.2 Nonmetals** (p. 61)
- **4.3.4 Thermocouples** (p. 63)
- **4.3.5 Semiconductor Junction Sensors** (p. 63)
- **4.3.6 Temperature Sensors Built on Other Principles** (p. 64)
- **4.3.7 Conclusion** (p. 65)
- **4.4 Optical Sensors** (p. 65)
- **4.4.1 Instrumentation** (p. 66)
- **4.4.2 Absorption Detection** (p. 67)
- **4.4.3 Evanescent-wave Sensing** (p. 70)
- **4.4.4 Fluorescence Detection** (p. 71)
- **4.5 Electrochemical Sensors** (p. 73)
- **4.6 References** (p. 76)
- **5 Simulations in Microfluidics** (p. 79)
- **5.1 Physical Aspects and Design** (p. 80)
- **5.2 Choosing Software and Hardware** (p. 83)
- **5.2.1 CFD-ACE+ Version 6.6** (p. 83)
- **5.2.2 CoventorWare Version 2001.3** (p. 84)

- **5.2.3 Hardware** (p. 85)
- **5.2.4 The Core Elements of Typical CFD Software** (p. 85)
- **5.2.5 Pre-processors** (p. 85)
- **5.2.6 Solvers** (p. 89)
- **5.2.7 Post-processors** (p. 89)
- **5.3 Important Numerical Settings** (p. 90)
- **5.3.1 Boundary Conditions** (p. 90)
- **5.3.2 Solver Settings** (p. 91)
- **5.4 Errors and Uncertainties** (p. 95)
- **5.5 Interpretation and Evaluation of Simulations** (p. 95)
- **5.6 Example Simulations** (p. 96)
- **5.6.1 Fully-developed Flow in a Circular Capillary** (p. 96)
- **5.6.2 Movement of a Chemical Plug by Electroosmotic Flow in a Detection Cell** (p. 100)
- **5.6.3 Conclusions** (p. 113)
- **5.7 References** (p. 115)
- **6 Silicon and Cleanroom Processing** (p. 117)
- **6.1 Substrate Fabrication** (p. 118)
- **6.2 Optical Lithography** (p. 122)
- **6.2.1 Photolithography** (p. 122)
- **6.2.2 Mask Design** (p. 125)
- **6.2.3 Hints in Planning Fabrication Runs** (p. 129)
- **6.3 Deposition** (p. 129)
- **6.3.1 Fundamentals of Coatings** (p. 129)
- **6.3.2 Deposition Methods** (p. 131)
- **6.3.3 Materials** (p. 135)
- **6.3.4 Lift-off** (p. 140)
- **6.3.5 Silicides** (p. 141)
- **6.4 Etching Removal** (p. 141)
- **6.4.1 Wet-etching Fundamentals** (p. 142)
- **6.4.2 Etching with HF** (p. 142)
- **6.4.3 Isotropic Silicon Etch** (p. 143)
- **6.4.4 Orientation-dependent Silicon Etching** (p. 144)
- **6.4.5 Common Orientation-dependent Etchants** (p. 145)
- **6.4.6 Other Etchants** (p. 145)
- **6.4.7 Effects of Not Stirring a Transport-limited Etch** (p. 146)
- **6.5 Dry Etching** (p. 147)
- **6.5.1 Plasma Etching Fundamentals** (p. 147)
- **6.5.2 Plasma Etching Setups** (p. 150)
- **6.5.3 Etch Gases** (p. 152)
- **6.5.4 Laser-assisted Etching** (p. 153)
- **6.6 Heat Treatment** (p. 153)
- **6.6.1 Thermal Oxidation** (p. 153)
- **6.6.2 Diffusion** (p. 156)
- **6.6.3 Annealing** (p. 157)
- **6.6.4 Wafer Bonding** (p. 158)

- **6.7 References** (p. 160)
- **7 Glass Micromachining** (p. 161)
  - **7.1 Wet Chemical Etching** (p. 162)
  - **7.2 Reactive Ion Etching (RIE) of Glass** (p. 163)
  - **7.3 Laser Patterning** (p. 163)
  - **7.4 Powder Blasting** (p. 164)
  - **7.5 Glass Bonding** (p. 164)
  - **7.6 A Microfabrication Example** (p. 166)
  - **7.7 References** (p. 168)
- **8 Polymer Micromachining** (p. 169)
  - **8.1 Hot Embossing** (p. 170)
  - **8.2 Injection Molding** (p. 172)
  - **8.3 Casting** (p. 172)
  - **8.4 Laser Micromachining** (p. 173)
  - **8.5 Milling** (p. 175)
  - **8.6 X-ray and Ultraviolet Polymer Lithography** (p. 175)
  - **8.7 Sealing of Polymer Microstructures** (p. 176)
  - **8.8 Adding Functionalities** (p. 177)
  - **8.9 Examples of Polymer Microstructures** (p. 179)
  - **8.10 References** (p. 180)
- **9 Packaging of Microsystems** (p. 183)
  - **9.1 Levels of Packaging** (p. 185)
    - **9.1.1 Wafer Level Packaging** (p. 185)
    - **9.1.2 Multichip Packages** (p. 186)
    - **9.1.3 Nonstandard Packages** (p. 188)
  - **9.2 Design Process in Packaging** (p. 188)
    - **9.2.1 Phases of Design** (p. 188)
    - **9.2.2 Recognition and Identification** (p. 189)
    - **9.2.3 Synthesis** (p. 189)
    - **9.2.4 Evaluation and Testing** (p. 191)
      - **9.2.4.1 Bond Strength Test** (p. 192)
      - **9.2.4.2 Package Hermeticity Tests** (p. 193)
      - **9.2.4.3 Other Tests** (p. 194)
  - **9.3 Influencing Factors in Packaging Design** (p. 194)
  - **9.4 Factors Influencing Package Reliability** (p. 195)
    - **9.4.1 Residual Stress** (p. 195)
    - **9.4.2 Mechanical Protection and Stress Relief Structures** (p. 196)
    - **9.4.3 Electrical Protection and Passivation** (p. 197)
    - **9.4.4 Alignment During Bonding** (p. 198)
    - **9.4.5 Thermal Performance** (p. 198)
    - **9.4.6 Chemical Resistance** (p. 200)
    - **9.4.7 Protection During Packaging** (p. 201)
  - **9.5 Interconnections** (p. 201)
    - **9.5.1 Fluidic Interconnections** (p. 201)
    - **9.5.2 Electrical Interconnections** (p. 205)
    - **9.5.3 Optical Interconnections** (p. 206)

- **9.6 Comparison of Important Micromachining Materials** (p. 207)
- **9.7 References** (p. 211)
- **10 Analytical Chemistry on Microsystems** (p. 213)
- **10.1 Sensors and Sensor Systems** (p. 216)
- **10.2 Biosensors** (p. 219)
- **10.3 Flow Injection Analysis** (p. 221)
- **10.4 Separation Techniques** (p. 224)
- **10.4.1 Free-zone Electrophoresis** (p. 226)
- **10.4.2 Gel Electrophoresis** (p. 228)
- **10.4.3 Micellar Electrokinetic Chromatography (MEKC)** (p. 229)
- **10.4.4 Open-channel Electrochromatography (OCEC)** (p. 232)
- **10.4.5 Packed-bed Chromatography** (p. 233)
- **10.4.6 Microfabricated Stationary-phase Support Structures** (p. 233)
- **10.4.7 In-situ-polymerized Stationary Phases** (p. 236)
- **10.4.8 Synchronous Cyclic Capillary Electrophoresis (SCCE)** (p. 237)
- **10.4.9 Two-dimensional Separations** (p. 238)
- **10.4.10 Hydrodynamic Chromatography** (p. 240)
- **10.4.11 Shear-driven Chromatography** (p. 241)
- **10.5 Other Analytical Techniques** (p. 242)
- **10.5.1 Solid-phase Extraction (SPE)** (p. 242)
- **10.5.2 Electrokinetic Enrichment of DNA** (p. 244)
- **10.5.3 Electrostacking** (p. 244)
- **10.6 References** (p. 247)
- **Subject Index** (p. 251)
