

- **Preface** (p. XV)
- **List of Authors** (p. XIX)
- **1 Nanotechnology and Tissue Engineering: The Scaffold Based Approach** (p. 1)
- **1.1 Overview** (p. 1)
- **1.2 Introduction** (p. 1)
- **1.3 The Importance of Scaffolds in Tissue Engineering** (p. 4)
- **1.4 Structure and Functions of Natural Extracellular Matrix** (p. 12)
- **1.5 Applications of Nanotechnology in Developing Scaffolds for Tissue Engineering** (p. 21)
- **1.5.1 Polymeric Nanofiber Scaffolds** (p. 23)
- **1.5.1.1 Top-down Approaches in Developing Scaffolds for Nano-based Tissue Engineering** (p. 24)
- **1.5.1.2 Bottom-up Approaches in Developing Scaffolds for Nano-based Tissue Engineering** (p. 33)
- **1.6 Cell Behavior Towards Nano-based Matrices** (p. 39)
- **1.7 Applications of Nano-based Matrices as Scaffolds for Tissue Engineering** (p. 43)
- **1.7.1 Stem Cell Adhesion and Differentiation** (p. 43)
- **1.7.2 Neural Tissue Engineering** (p. 47)
- **1.7.3 Cardiac and Blood Vessel Tissue Engineering** (p. 49)
- **1.7.4 Bone, Ligament and Cartilage Tissue Engineering** (p. 54)
- **1.8 Conclusions** (p. 55)
- **References** (p. 56)
- **2 Polymeric Nanofibers in Tissue Engineering** (p. 66)
- **2.1 Overview** (p. 66)
- **2.2 Introduction** (p. 67)
- **2.2.1 History of Tissue Engineering and Nanofibers** (p. 67)
- **2.3 Classification of Nanofibers** (p. 69)
- **2.3.1 Synthetic Polymers** (p. 69)
- **2.3.2 Biopolymers** (p. 69)
- **2.3.3 Copolymers** (p. 70)
- **2.3.4 Composite Polymers** (p. 70)
- **2.4 Nanofiber Fabrication** (p. 70)
- **2.4.1 Drawing** (p. 71)
- **2.4.2 Template Synthesis** (p. 71)
- **2.4.3 Phase Separation** (p. 72)
- **2.4.4 Self-assembly** (p. 73)
- **2.4.5 Electrospinning** (p. 73)
- **2.5 Degradation and Absorption Kinetics of Nanofiber Scaffolds Compared with Conventional Scaffolds** (p. 74)
- **2.6 Advantages and Disadvantages of Nanofiber Scaffolds Compared with Other Conventional Scaffolds** (p. 76)
- **2.7 Biocompatibility of Nano-structured Tissue Engineered Implants** (p. 82)
- **2.8 Applications of Polymeric Nanofibers in Tissue Engineering** (p. 87)
- **2.8.1 Ophthalmology** (p. 89)
- **2.8.2 Liver** (p. 93)
- **2.8.3 Nerve** (p. 93)

- **2.8.4 Skin** (p. 99)
- **2.8.5 Bone and Cartilage** (p. 102)
- **2.8.6 Heart and Vascular Grafts** (p. 105)
- **2.8.7 Stem Cells** (p. 109)
- **2.9 Innovations in Nanofiber Scaffolds** (p. 111)
- **2.10 Conclusion** (p. 115)
- **References** (p. 316)
- **3 Electrospinning Technology for Nanofibrous Scaffolds in Tissue Engineering** (p. 335)
 - **3.1 Introduction** (p. 135)
 - **3.2 Nanofibrous Scaffolds** (p. 138)
 - **3.2.1 Fabrication Methods for Nanofibrous Scaffolds** (p. 138)
 - **3.2.1.1 Phase Separation** (p. 138)
 - **3.2.1.2 Self-assembly** (p. 138)
 - **3.2.1.3 Electrospinning** (p. 139)
 - **3.2.2 The Electrospinning Process** (p. 140)
 - **3.2.2.1 History** (p. 140)
 - **3.2.2.2 Setup** (p. 141)
 - **3.2.2.3 Mechanism and Working Parameters** (p. 142)
 - **3.2.3 Properties of Electrospun Nanofibrous Scaffolds** (p. 144)
 - **3.2.3.1 Architecture** (p. 144)
 - **3.2.3.2 Porosity** (p. 145)
 - **3.2.3.3 Mechanical Properties** (p. 146)
 - **3.3 Current Development of Electrospun Nanofibrous Scaffolds in Tissue Engineering** (p. 146)
 - **3.3.1 Evidence Supporting the Use of Nanofibrous Scaffolds in Tissue Engineering** (p. 146)
 - **3.3.1.1 Nanofibrous Scaffolds Enhance Adsorption of Cell Adhesion Molecules** (p. 146)
 - **3.3.1.2 Nanofibrous Scaffolds Induce Favorable Cell-ECM Interaction** (p. 147)
 - **3.3.1.3 Nanofibrous Scaffolds Maintain Cell Phenotype** (p. 148)
 - **3.3.1.4 Nanofibrous Scaffolds Support Differentiation of Stem Cells** (p. 149)
 - **3.3.1.5 Nanofibrous Scaffolds Promote in vivo-like 3D Matrix Adhesion and Activate Cell Signaling Pathway** (p. 150)
 - **3.3.2 Biomaterials Electrospun into Nanofibrous Scaffolds** (p. 151)
 - **3.3.2.1 Natural Polymeric Nanofibrous Scaffolds** (p. 151)
 - **3.3.2.2 Synthetic Polymeric Nanofibrous Scaffolds** (p. 162)
 - **3.3.2.3 Composite Polymeric Nanofibrous Scaffolds** (p. 166)
 - **3.3.2.4 Nanofibrous Scaffolds Coated with Bioactive Molecules** (p. 168)
 - **3.3.3 Engineered Tissues using Electrospun Nanofibrous Scaffolds** (p. 169)
 - **3.3.3.1 Skin** (p. 169)
 - **3.3.3.2 Blood Vessel** (p. 170)
 - **3.3.3.3 Cartilage** (p. 171)
 - **3.3.3.4 Bone** (p. 172)
 - **3.3.3.5 Muscle** (p. 173)
 - **3.3.3.6 Ligament** (p. 175)

- **3.3.3.7 Nerve** (p. 175)
- **3.4 Current Challenges and Future Directions** (p. 176)
- **3.5 Conclusion** (p. 177)
- **References** (p. 177)
- **4 Nanofibrous Scaffolds and their Biological Effects** (p. 188)
 - **4.1 Overview** (p. 188)
 - **4.2 Introduction** (p. 188)
 - **4.3 Methods of Formation** (p. 190)
 - **4.3.1 Electrospinning** (p. 190)
 - **4.3.2 Self-assembly** (p. 193)
 - **4.3.3 Phase Separation** (p. 194)
 - **4.4 Nanofibrous Composite Scaffolds** (p. 198)
 - **4.4.1 Inorganic Composites** (p. 199)
 - **4.4.2 Surface Modification** (p. 200)
 - **4.4.3 Factor Delivery Scaffolds** (p. 201)
 - **4.5 Biological Effects of Nanofibers** (p. 202)
 - **4.5.1 Attachment** (p. 202)
 - **4.5.2 Proliferation** (p. 203)
 - **4.5.3 Differentiation** (p. 203)
 - **4.5.4 Migration** (p. 204)
 - **4.6 Tissue Formation** (p. 205)
 - **4.6.1 Connective Tissue** (p. 205)
 - **4.6.1.1 Ligaments** (p. 205)
 - **4.6.1.2 Cartilage** (p. 205)
 - **4.6.1.3 Bone** (p. 206)
 - **4.6.2 Neural Tissue** (p. 207)
 - **4.6.3 Cardiovascular Tissue** (p. 208)
 - **4.6.3.1 Cardiac Muscle** (p. 208)
 - **4.6.3.2 Blood Vessel** (p. 208)
 - **4.6.4 Liver Tissue** (p. 208)
 - **4.7 Conclusion** (p. 209)
 - **References** (p. 210)
- **5.3 Stem Cells: The Essentials** (p. 220)
- **5 Nanophase Biomaterials for Tissue Engineering** (p. 216)
 - **5.1 Introduction: Problems with Current Therapies** (p. 216)
 - **5.2 Tissue Engineering: A Potential Solution** (p. 219)
 - **5.4 Nanobiomaterials: A New Generation Scaffolding Material** (p. 223)
 - **5.4.1 Characteristics of Scaffold** (p. 225)
 - **5.4.2 Types of Scaffolding Materials** (p. 227)
 - **5.4.2.1 Ceramic Nanobiomaterials** (p. 227)
 - **5.4.2.2 Polymeric Nanobiomaterials** (p. 234)
 - **5.5 Nanofibrous Scaffold Processing: Current Scenarios** (p. 237)
 - **5.5.1 Self-assembly** (p. 237)
 - **5.5.2 Phase Separation** (p. 239)
 - **5.5.3 Electrospinning - A New Approach** (p. 240)
 - **5.5.3.1 Experimental System** (p. 240)

- **5.5.3.2 Spinning Mechanism** (p. 241)
- **5.5.3.3 Electrospun Nanofibrous Scaffolds** (p. 243)
- **5.6 Cell-Matrix (Scaffold) Interactions** (p. 244)
- **5.6.1 Cell-Ceramic Scaffold Interactions** (p. 244)
- **5.6.2 Cell-Polymer Scaffold Interactions** (p. 247)
- **5.7 Concluding Remarks** (p. 248)
- **Acknowledgments** (p. 249)
- **Abbreviations** (p. 249)
- **Glossary** (p. 250)
- **References** (p. 252)
- **6 Orthopedic Tissue Engineering Using Nanomaterials** (p. 257)
- **6.1 Preface** (p. 257)
- **6.2 Introduction: Problems with Current Implants** (p. 258)
- **6.3 A Potential Solution: Nanotechnology** (p. 259)
- **6.3.1 Current Research Efforts to Improve Implant Performance Targeted at the Nanoscale** (p. 260)
- **6.3.1.1 Ceramic Nanomaterials** (p. 262)
- **6.3.1.2 Metal Nanomaterials** (p. 270)
- **6.3.1.3 Polymeric Nanomaterials** (p. 270)
- **6.3.1.4 Composite Nanomaterials** (p. 274)
- **6.3.2 In Vivo Compared with In Vitro Studies** (p. 276)
- **6.4 Considerations and Future Directions** (p. 278)
- **Acknowledgments** (p. 279)
- **References** (p. 279)
- **7 Hydroxyapatite Nanocrystals as Bone Tissue Substitute** (p. 283)
- **7.1 Overview** (p. 283)
- **7.2 Introduction** (p. 284)
- **7.3 Biogenic Hydroxyapatite: Bone and Teeth** (p. 284)
- **7.4 Biomimetic Hydroxyapatite: Porous and Substituted Apatites** (p. 288)
- **Acknowledgments** (p. 301)
- **7.5 Biologically Inspired Hydroxyapatite: HA-Collagen Composites and Coatings** (p. 292)
- **7.6 Functionalized Hydroxyapatite: HA Nanocrystals - Bioactive Molecules** (p. 296)
- **7.7 Conclusion and Future Challenges** (p. 301)
- **References** (p. 302)
- **8 Magnetic Nanoparticles for Tissue Engineering** (p. 308)
- **8.1 Introduction** (p. 308)
- **8.2 Mesenchymal Stem Cell Isolation and Expansion** (p. 310)
- **8.2.1 MSC Expansion using MCLs** (p. 310)
- **8.2.2 MSC Isolation and Expansion using AMLs** (p. 313)
- **8.3 Mag-seeding** (p. 316)
- **8.4 Construction of 3D Tissue-like Structure** (p. 318)
- **8.4.1 Cell Sheet Engineering using RGD-MCLs** (p. 318)
- **8.4.2 Construction of a Keratinocyte Sheet using MCLs** (p. 321)
- **8.4.3 Delivery of Mag-tissue Engineered RPE Sheet** (p. 323)
- **8.4.4 Construction of a Liver-like Structure using MCLs** (p. 326)

- **8.4.5 Construction of Tubular Structures using MCLs** (p. 328)
- **8.5 Conclusion** (p. 330)
- **References** (p. 331)
- **9 Applications and Implications of Single-walled Carbon Nanotubes in Tissue Engineering** (p. 338)
 - **9.1 Introduction** (p. 338)
 - **9.2 Electromagnetic Fields for Tissue Regeneration** (p. 339)
 - **9.3 Tissue Engineering** (p. 340)
 - **9.4 SWNT Preparation: Purification and Functionalization** (p. 342)
 - **9.5 Specific Applications of Carbon Nanotubes in Tissue Engineering** (p. 352)
 - **9.6 Conclusions** (p. 355)
 - **References** (p. 355)
