

- **List of Contributors** (p. XIX)
- **List of Abbreviations** (p. XXVII)
- **1.2 Areas of the RR Application** (p. 5)
- **1.2.3 Robots for Physical Rehabilitation** (p. 7)
- **1.2.4 Vocational RR** (p. 8)
- **1.3 Specialized Human-Machine Interface** (p. 10)
- **1.4 Rehabilitation Robots in the Smart House Design** (p. 10)
- **1.5 Functional Integration of the Robotic Environment** (p. 12)
- **2.2 Earliest Work** (p. 26)
- **Part I Introduction**
- **1 Advances in Human-Friendly Robotic Technologies for Movement Assistance/Movement Restoration for People with Disabilities** (p. 3)
- **1.6 Commercialization of RR** (p. 13)
- **1.7 Some Issues for Futuristic Intelligent Robotic House Model** (p. 16)
- **1.8 Concluding Remarks** (p. 18)
- **2 Rehabilitation Robotics from Past to Present - A Historical Perspective** (p. 25)
- **1.1 Introduction** (p. 3)
- **1.2.1 Robotic Systems for Movement Assistance** (p. 5)
- **1.2.2 Robots for Physical Support and Indoor Navigation** (p. 7)
- **2.1 Introduction** (p. 25)
- **1.2.5 Emotional Interactive Entertainment Robots** (p. 9)
- **2.3.1 Fixed Site** (p. 28)
- **2.3.2 Mobile Robots** (p. 31)
- **2.3.4 Human Machine Interface** (p. 35)
- **2.4 Mobility** (p. 35)
- **2.5 Prosthetics and Orthotics** (p. 36)
- **2.6 Robot Mediated Therapy** (p. 37)
- **2.7 Robotics in Special Needs Education** (p. 38)
- **2.9 Historical Perspective** (p. 40)
- **2.10 Commercialisation** (p. 40)
- **2.11 Alternatives to Robotics in Rehabilitation** (p. 41)
- **2.12 Conclusions** (p. 42)
- **Part II Rehabilitation Robots for Assistance of Human Movements II.1 Conceptions and Experimental Design**
- **3 Toward a Human-Friendly User Interface to Control an Assistive Robot in the Context of Smart Homes** (p. 47)
- **3.1 Introduction** (p. 47)
- **3.2 MANUS Assistive Robot** (p. 48)
- **3.3 Networking Technologies and Developments** (p. 49)
- **3.4 General Software Architecture** (p. 50)
- **3.5 User Interface Adaptation** (p. 51)
- **3.6 Implementation of a Path Planner** (p. 52)
- **3.6.1 Gesture Library** (p. 52)
- **3.6.2 Obstacles Avoidance** (p. 53)
- **3.7 Towards the Co-autonomy Concept** (p. 54)
- **2.3 Assistive Robotics** (p. 27)

- **2.3.3 Wheelchair Mounted Manipulators** (p. 33)
- **2.8 Robotics in Communications** (p. 39)
- **3.8 Conclusion** (p. 55)
- **4 Welfare-Oriented Service Robotic Systems: Intelligent Sweet Home & KARES II** (p. 57)
 - **4.1 Introduction** (p. 57)
 - **4.2 Intelligent Sweet Home** (p. 59)
 - **4.2.1 Questionnaire Survey** (p. 59)
 - **4.2.2 Assistive Systems** (p. 62)
 - **4.2.3 Intelligent Man-Machine Interfaces** (p. 67)
 - **4.3 KARES II System** (p. 72)
 - **4.3.1 Questionnaire Survey** (p. 73)
 - **4.3.2 Overall Structure** (p. 74)
 - **4.3.3 Soft Robotic Arm with Visual Servoing** (p. 77)
 - **4.3.4 Intelligent Human-Robot Interfaces** (p. 79)
 - **4.3.5 User Trials** (p. 82)
 - **4.4 Concluding Remarks** (p. 89)
- **5 "FRIEND" - An Intelligent Assistant in Daily Life** (p. 95)
 - **5.1 Basic Concepts and Hardware** (p. 95)
 - **5.1.1 The FRIEND Project** (p. 95)
 - **5.1.2 Hardware Structure of FRIEND** (p. 96)
 - **5.2.1 The "Beverage Serving" Task** (p. 101)
 - **5.2.2 Obstacle Avoidance** (p. 109)
 - **5.2.3 Task Planning** (p. 111)
 - **5.3 Summary** (p. 124)
- **6 GIVING-A-HAND System: The Development of a Task-Specific Robot Appliance** (p. 127)
 - **6.1 Introduction** (p. 127)
 - **6.2 Background** (p. 128)
 - **6.2.2 Localized System of Appliances** (p. 130)
 - **6.3 Design Concept for the Giving-A-Hand System** (p. 132)
 - **6.4 Domotic/Telematic and Robotic Assistance** (p. 133)
 - **6.5 The Fetch and Carry Robot Appliance Development** (p. 133)
 - **6.6 User-Centered Development** (p. 135)
 - **6.7 Prototype of a Local Network with the Robot Appliance** (p. 138)
 - **6.8 Summary and Conclusions** (p. 140)
- **7 Cooperative Welfare Robot System Using Hand Gesture Instructions** (p. 143)
 - **7.1 Introduction** (p. 143)
 - **7.3 Measurement of Distance Using Stereo Images** (p. 145)
 - **7.4 Detection of the Hand and the Target Object** (p. 146)
 - **5.1.3 Multi-layered Control Architecture of FRIEND** (p. 97)
 - **7.2 Cooperative Robot System** (p. 144)
 - **5.2 Application and Control** (p. 100)
 - **5.2.4 Demonstration-Based Programming** (p. 119)
 - **6.2.1 Domotic-Robotic Integrated System** (p. 129)
 - **7.4.1 Detection of the Hand Area Using Color Image** (p. 146)

- **7.4.2 Tracking of the Hand Using CP** (p. 147)
- **7.4.3 Detection of the Object Using Gesture Instruction** (p. 148)
- **7.5 Recognition of the Hand Gesture** (p. 149)
- **7.6 Experimental Results** (p. 150)
- **7.7 Conclusions** (p. 152)
- **8 Selectable Operating Interfaces of the Meal-Assistance Device "My Spoon"** (p. 155)
 - **8.1 Introduction** (p. 155)
 - **8.2 Meal-Assistance Device "My Spoon"** (p. 155)
 - **8.3 Operating Interface** (p. 156)
 - **8.4 Basic Operation** (p. 156)
 - **8.4.1 Setup** (p. 157)
 - **8.4.2 Compartment Selection Command Set** (p. 158)
 - **8.4.3 Position Adjustment Command Set** (p. 158)
 - **8.5 Control Modes** (p. 159)
 - **8.5.1 Manual Mode** (p. 159)
 - **8.5.2 Semi-automatic Mode** (p. 159)
 - **8.5.3 Automatic Mode** (p. 160)
 - **8.6 Future Tasks** (p. 161)
 - **8.6.1 Food Recognition by Using Color Image Processing** (p. 161)
 - **8.6.2 Improvements in Operation** (p. 162)
 - **8.7 Conclusion** (p. 163)
- **9 Enhancing the Usability of the MANUS Manipulator by Using Visual Servoing** (p. 165)
 - **9.1 Introduction** (p. 165)
 - **9.2 Visual Servoing** (p. 167)
 - **9.2.1 Vision Aspects of the Visual Servoing** (p. 168)
 - **9.3 Control Architecture** (p. 168)
 - **9.4 Vision System** (p. 169)
 - **9.4.1 Theory** (p. 169)
 - **9.4.2 Implementation** (p. 170)
 - **9.5 Stability** (p. 171)
 - **9.6 Experiments** (p. 171)
 - **9.7 Conclusions and Future Work** (p. 174)
- **Part II Rehabilitation Robots for Assistance of Human Movements II.2 Safety Issues of the Rehabilitation Robots**
 - **10 A Safety Strategy for Rehabilitation Robots** (p. 177)
 - **10.1 Introduction** (p. 177)
 - **10.2 Principles of Safety Standards for Robots** (p. 177)
 - **10.2.1 Framework of New Safety Standards for Robots** (p. 177)
 - **10.2.2 Safety Standard for Machinery** (p. 178)
 - **10.2.3 Risk Assessment Process and Risk Reduction** (p. 179)
 - **10.2.4 Tolerable Risks for Robots** (p. 180)
 - **10.3 Case Study on Safety of Rehabilitation Robots** (p. 181)
 - **10.3.1 Risk Estimation** (p. 182)
 - **10.3.2 Safety Measures of Risk Reduction** (p. 183)

- **10.3.3 Benefit Estimation** (p. 183)
- **10.4 Proposal of Risk Assessment Guideline for Rehabilitation Robots** (p. 184)
- **10.5 Conclusion** (p. 185)
- **11 Safety Evaluation Method of Rehabilitation Robots** (p. 187)
- **11.1 Introduction** (p. 187)
- **11.2 Safety Strategy for Human-Care Robots** (p. 187)
- **11.2.1 Injury to Humans from Human-Care Robots** (p. 187)
- **11.2.2 Classification of Safety Strategies** (p. 188)
- **11.3 Proposing Evaluation Measures of Safety** (p. 189)
- **11.3.1 Necessity of Safe Quantitative Evaluation** (p. 189)
- **11.3.2 Selection of Evaluation Measures** (p. 189)
- **11.4 General Evaluation Method Using Evaluation Measures** (p. 190)
- **11.5 Deriving Danger-Indexes of Safety Strategy** (p. 192)
- **11.5.1 Safety Design Strategy** (p. 192)
- **11.5.2 Safety Control Strategy** (p. 193)
- **11.6 Proposal of Design Optimization and Practical Examples** (p. 194)
- **11.6.1 Formulating the Design Optimization Method** (p. 194)
- **11.6.2 Maximizing Safety Under Fixed Cost** (p. 195)
- **11.6.3 A New Method of Calculate a Safe Approach Motion** (p. 196)
- **11.7 Conclusions** (p. 197)
- **12 Risk Reduction Mechanisms for Safe Rehabilitation Robots** (p. 199)
- **12.1 Introduction** (p. 199)
- **12.2 Tolerable Risk and Surface Injury** (p. 199)
- **12.3 Force Limitation Methods** (p. 201)
- **12.4 A Straight Movement-Type Force Limitation Mechanism** (p. 202)
- **12.5 A Three-Dimensional Force Limitation Mechanism** (p. 204)
- **12.6 Reflex Mechanism** (p. 206)
- **12.7 Conclusions** (p. 207)
- **Part II Rehabilitation Robots for Assistance of Human Movements II.3 Rehabilitation-Robot Evaluation**
- **13 Usability of an Assistive Robot Manipulator: Toward a Quantitative User Evaluation** (p. 211)
- **13.1 Introduction** (p. 211)
- **13.2 Users Needs Analysis** (p. 212)
- **13.3 Hardware and Software Organization** (p. 212)
- **13.3.1 Hardware Architecture** (p. 213)
- **13.3.2 Software Command Architecture** (p. 214)
- **13.4 Quantitative Evaluation Method** (p. 215)
- **13.5 Preliminary Results** (p. 215)
- **13.5.1 Modes and Time of Use** (p. 216)
- **13.5.2 Actions Number** (p. 217)
- **13.6 Discussion** (p. 219)
- **13.7 Conclusion** (p. 219)
- **14.1 Introduction** (p. 221)
- **14.2 Wheelchair Mounted Service Manipulator ARM** (p. 221)
- **14.3.2 Indication Criteria** (p. 224)

- **14.3.3 Stand-Alone Test** (p. 224)
- **14.3.4 Formal Application and Funding of an ARM** (p. 226)
- **14.3.5 Mounting the ARM on the Wheelchair** (p. 226)
- **14.3.6 Training** (p. 226)
- **14 Processes for Obtaining a "Manus" (ARM) Robot within The Netherlands** (p. 221)
- **14.3 The Current Process of Providing an ARM to a User** (p. 223)
- **14.3.1 Informing Users about the Benefits of the ARM** (p. 224)
- **14.3.7 Service and Maintenance** (p. 227)
- **14.4 The Future Process of Prescribing the ARM** (p. 227)
- **14.5 Summary of Two Recent Dutch ARM-User Evaluations** (p. 228)
- **14.5.1 User Study Conducted by iRV** (p. 228)
- **14.5.2 User Study Conducted by hetDorp** (p. 229)
- **Part III Prostheses and Orthoses**
- **15 Experimental Analysis of the Proprioceptive and Exteroceptive Sensors of an Underactuated Prosthetic Hand** (p. 233)
- **15.1 Introduction** (p. 233)
- **15.2 Mechanical Structure** (p. 234)
- **15.3 Sensory System** (p. 235)
- **15.4 Materials and Methods** (p. 236)
- **15.4.1 Slider Position Sensor** (p. 236)
- **17.2.2 Initial Assumptions** (p. 258)
- **15.4.2 Tendon Tensiometer** (p. 237)
- **16.4 Clinical Testing** (p. 248)
- **17.2.1 Problem Statement** (p. 258)
- **15.4.3 Thumb Position Sensor** (p. 239)
- **15.5 Conclusions** (p. 241)
- **15.4.4 Force Sensor** (p. 240)
- **16 Design and Testing of WREX** (p. 243)
- **16.5 Results** (p. 248)
- **17 A Concept for Control of Indoor-Operated Autonomous Wheelchair** (p. 253)
- **16.1 Introduction** (p. 243)
- **16.2 Design of WREX** (p. 244)
- **16.3 Gravity Balancing With $x \neq 0$** (p. 245)
- **17.1.1 Methods for Navigation** (p. 254)
- **17.2 Conception of Wheelchair Navigation** (p. 258)
- **Part IV Intelligent Wheelchairs**
- **17.1 Introduction and Related Works** (p. 253)
- **17.1.2 Path Planning and Navigation to the Goal** (p. 256)
- **17.3 Localization of the Wheelchair Position** (p. 260)
- **17.4 Scenario of the Wheelchair Control** (p. 262)
- **17.5 Navigation System** (p. 264)
- **17.6 Computer Simulation of the Control Algorithm** (p. 267)
- **17.6.1 Wheelchair Kinematics** (p. 267)
- **17.6.2 Modeling of the Sensors and Their Arrangement on the Wheelchair Platform** (p. 269)

- **17.6.3 Navigation Algorithm of the Simulator** (p. 272)
 - **17.7 Evaluation of the Control Algorithm** (p. 283)
 - **17.7.1 Navigation to Multiple Goals** (p. 283)
 - **17.7.2 Obstacle Avoidance** (p. 284)
 - **17.7.3 Avoiding a "Trap"** (p. 286)
 - **17.7.4 Navigation in a Complex Environment** (p. 288)
 - **17.7.5 Route Generation in Partially Known Environment** (p. 292)
 - **17.8 Future Plans and Concluding Remark** (p. 294)
 - **18 Design of an Intelligent Wheelchair for the Motor Disabled** (p. 299)
 - **18.1 Introduction** (p. 299)
 - **18.2 Related Works** (p. 300)
 - **18.4.1 Hardware Configuration** (p. 302)
 - **18.5 Navigation** (p. 304)
 - **18.5.1 Localization** (p. 304)
 - **18.5.2 Hierarchical Control Architecture** (p. 306)
 - **18.3 Requirements** (p. 301)
 - **18.4 System Architecture** (p. 302)
 - **18.4.2 Software Design for Real-Time System** (p. 303)
 - **18.6 Experiments** (p. 307)
 - **18.7 Conclusion** (p. 309)
 - **Part V Mechatronics Devices for Assistance in Walking**
 - **19 Electrically Assisted Walker with Supporter-Embedded Force-Sensing Device** (p. 313)
 - **19.1 Introduction** (p. 313)
 - **19.3 Supporter-Embedded Force Sensor** (p. 315)
 - **19.3.2 Sensor Structure** (p. 316)
 - **19.3.3 Sensing Method** (p. 317)
 - **19.3.4 Advantages** (p. 318)
 - **19.4 Experiments** (p. 319)
 - **19.5 Discussion** (p. 321)
 - **19.6 Summary** (p. 321)
 - **20 Human-Friendly Care Robot System for the Elderly** (p. 323)
 - **20.1 Introduction** (p. 323)
 - **20.1.1 The Functions of Do-u-mi Robot** (p. 323)
 - **20.3 Sound Localization** (p. 326)
 - **20.4 Face Tracking** (p. 327)
 - **20.4.1 Face Candidate Extraction** (p. 328)
 - **19.2 Electrically Assisted Walker** (p. 314)
 - **19.3.1 Requirements for the Force Sensor** (p. 315)
 - **20.2 Overall System of Do-u-mi Robot** (p. 325)
 - **20.5 Autonomous Navigation** (p. 330)
 - **20.6 Conclusion** (p. 331)
- **21 Newly Designed Rehabilitation Robot System for Walking-Aid** (p. 333)
 - **21.1 Introduction** (p. 333)
 - **21.2 Electric Motor Based Gait Rehabilitation System** (p. 334)
 - **21.2.1 System Description** (p. 334)

- **21.2.2 Experiments** (p. 336)
- **21.3 Newly Developed Gait Rehabilitation System** (p. 338)
- **21.3.1 System Description** (p. 338)
- **21.3.2 Control Method** (p. 340)
- **21.4 Conclusion** (p. 342)
- **Part VI Robot-Assisted Neurorehabilitation**
- **22 A Gentle/S Approach to Robot Assisted Neuro-Rehabilitation** (p. 347)
- **22.1 Abstract** (p. 347)
- **22.2 Background to Stroke** (p. 348)
- **22.3 Gentle/S** (p. 349)
- **22.3.1 Assumptions** (p. 350)
- **22.4 Clinical Prototype for Machine Mediated Neurorehabilitation** (p. 351)
- **22.4.1 Antigravity Mechanism for the Shoulder and Elbow** (p. 353)
- **22.4.2 Exercises & Movement Guidance** (p. 354)
- **22.4.3 Different Therapy Modes** (p. 357)
- **22.5 Clinical Trials** (p. 357)
- **22.5.1 Outcome Measures** (p. 358)
- **22.5.2 Data Analysis and Statistical Methodology** (p. 359)
- **22.5.3 Results** (p. 360)
- **22.6 Conclusions** (p. 361)
- **23 Wire Driven Robots for Rehabilitation** (p. 365)
- **23.1 Introduction** (p. 365)
- **23.1.1 Advantages of Wire Driven Robots** (p. 366)
- **23.1.2 Problems Related to Wire Driven Robots** (p. 367)
- **23.2 Manipulability and Wire Tension Computation** (p. 367)
- **23.3 NeRebot: An Example of Wire Driven Robot for Rehabilitation** (p. 369)
- **23.3.1 Software and Control** (p. 372)
- **23.3.2 Treatment Protocol** (p. 373)
- **23.4 Conclusions and Future Research** (p. 374)
- **24 A Wrist Extension for MIT-MANUS** (p. 377)
- **24.1 Introduction** (p. 377)
- **24.2 Specification for a New Wrist Device** (p. 380)
- **24.2.1 Kinematic Selection** (p. 381)
- **24.2.2 Actuator Placement and Transmission Selection** (p. 382)
- **24.2.3 Actuator Selection** (p. 382)
- **24.2.4 Sensor Selection** (p. 383)
- **24.3 Alpha-Prototype Overview** (p. 383)
- **24.4 Robotic Therapy** (p. 386)
- **24.5 Conclusions** (p. 388)
