

- 1 Introduction p. 1
- 1.1 Control Systems for IC Engines p. 1
- 1.1.1 Relevance of Engine Control Systems p. 1
- 1.1.2 Electronic Engine Control Hardware and Software p. 2
- 1.2 Overview of SI Engine Control Problems p. 3
- 1.2.1 General Remarks p. 3
- 1.2.2 Main Control Loops in SI Engines p. 5
- 1.2.3 Future Developments p. 7
- 1.3 Overview of CI Engine Control Problems p. 9
- 1.3.1 General Remarks p. 9
- 1.3.2 Main Control Loops in Diesel Engines p. 11
- 1.3.3 Future Developments p. 15
- 1.4 Structure of the Text p. 16
- 1.5 Notation p. 17
- 2 Mean-Value Models p. 21
- 2.1 Introduction p. 22
- 2.2 Cause and Effect Diagrams p. 24
- 2.2.1 Spark-Ignited Engines p. 25
- 2.2.2 Diesel Engines p. 28
- 2.3 Air System p. 30
- 2.3.1 Receivers p. 30
- 2.3.2 Valve Mass Flows p. 31
- 2.3.3 Engine Mass Flows p. 35
- 2.3.4 Exhaust Gas Recirculation p. 37
- 2.3.5 Superchargers p. 40
- 2.4 Fuel System p. 52
- 2.4.1 Introduction p. 52
- 2.4.2 Wall-Wetting Dynamics p. 53
- 2.4.3 Gas Mixing and Transport Delays p. 63
- 2.5 Mechanical System p. 64
- 2.5.1 Torque Generation p. 64
- 2.5.2 Engine Speed p. 74
- 2.6 Thermal Systems p. 79
- 2.6.1 Introduction p. 79
- 2.6.2 Engine Exhaust Gas Enthalpy p. 80
- 2.6.3 Thermal Model of the Exhaust Manifold p. 82
- 2.6.4 Simplified Thermal Model p. 83
- 2.6.5 Detailed Thermal Model p. 84
- 2.7 Pollutant Formation p. 91
- 2.7.1 Introduction p. 91
- 2.7.2 Stoichiometric Combustion p. 92
- 2.7.3 Pollutant Formation in SI Engines p. 93
- 2.7.4 Pollutant Formation in Diesel Engines p. 99
- 2.7.5 Control-Oriented NO Model p. 101
- 2.8 Pollutant Abatement Systems p. 105
- 2.8.1 Introduction p. 105

- 2.8.2 Pollution Abatement Systems for SI Engines p. 105
- 2.8.3 Pollution Abatement Systems for Diesel Engines p. 118
- 3 Discrete-Event Models p. 129
- 3.1 Introduction to DEM p. 130
- 3.1.1 When are DEM Required? p. 130
- 3.1.2 Discrete-Time Effects of the Combustion p. 130
- 3.1.3 Discrete Action of the ECU p. 132
- 3.1.4 DEM for Injection and Ignition p. 135
- 3.2 The Most Important DEM in Engine Systems p. 138
- 3.2.1 DEM of the Mean Torque Production p. 138
- 3.2.2 DEM of the Air Flow Dynamics p. 143
- 3.2.3 DEM of the Fuel-Flow Dynamics p. 146
- 3.2.4 DEM of the Back-Flow Dynamics of CNG Engines p. 155
- 3.2.5 DEM of the Residual Gas Dynamics p. 157
- 3.2.6 DEM of the Exhaust System p. 160
- 3.3 DEM Based on Cylinder Pressure Information p. 162
- 3.3.1 General Remarks p. 162
- 3.3.2 Estimation of Burned-Mass Fraction p. 163
- 3.3.3 Cylinder Charge Estimation p. 165
- 3.3.4 Torque Variations Due to Pressure Pulsations p. 170
- 4 Control of Engine Systems p. 173
- 4.1 Introduction p. 174
- 4.1.1 General Remarks p. 174
- 4.1.2 Software Structure p. 175
- 4.1.3 Engine Operating Point p. 178
- 4.1.4 Engine Calibration p. 179
- 4.2 Air/Fuel Ratio Control System p. 181
- 4.2.1 Feedforward Control System p. 181
- 4.2.2 Feedback Control System p. 186
- 4.3 Control of an SCR System p. 206
- 4.4 Engine Thermomanagement p. 211
- 4.4.1 Introduction p. 211
- 4.4.2 Control Problem Formulation p. 212
- 4.4.3 Feedforward Control System p. 214
- 4.4.4 Experimental Results p. 216
- A Appendix A p. 223
- A.1 Modeling of Dynamic Systems p. 223
- A.2 System Description and System Properties p. 232
- A.3 Model Uncertainty p. 238
- A.4 Control System Design for Nominal Plants p. 241
- A.5 Control System Design for Uncertain Plants p. 250
- A.6 Controller Discretization p. 253
- A.7 Controller Realization p. 262
- A.7.1 Gain Scheduling p. 263
- A.7.2 Anti Reset Windup p. 264
- A.8 Further Reading p. 264

- B Appendix B p. 267
- B.1 Modeling of the Idle Speed System p. 268
- B.1.1 Introduction p. 268
- B.1.2 System Structure p. 269
- B.1.3 Description of Subsystems p. 270
- B.2 Parameter Identification and Model Validation p. 277
- B.2.1 Static Behavior p. 277
- B.2.2 Dynamic Behavior p. 281
- B.2.3 Numerical Values of the Model Parameters p. 283
- B.3 Description of Linear System p. 285
- B.4 Control System Design and Implementation p. 287
- References p. 291
