

- Preface p. 15
- Acknowledgments p. 17
- 1 Asymptotic Approximations p. 19
 - 1.1 Asymptotic series p. 19
 - 1.2 Fundamental concepts of asymptotics [129] p. 21
 - 1.3 Transformations of asymptotical series [129] p. 23
 - 1.4 Nonuniform expansions [129] p. 25
 - 1.5 Non-dimensionalization p. 27
 - 1.6 Asymptotics of integrals [129] p. 29
- 2 Regular Perturbations Of Parameters p. 47
 - 2.1 Eigenvalue problems p. 47
 - 2.2 Stability of oval cylindrical shell uniformly loaded by external pressure p. 58
 - 2.3 Stability of the cantilever beam p. 60
 - 2.4 Adjoint operators method p. 62
 - 2.5 Transformation of coordinates and variables p. 65
 - 2.6 Asymptotic and real error p. 71
 - 2.7 Numerical verification of asymptotic solution p. 75
 - 2.8 Removal of nonuniformities p. 77
 - 2.9 Nonlinear vibrations of a stringer shell p. 81
 - 2.10 Non-quasilinear asymptotics of nonlinear system p. 84
 - 2.11 Artificial small parameters p. 88
 - 2.12 Method of small ζ p. 91
 - 2.13 Method of large ζ p. 94
 - 2.14 Choice of zero approximation p. 98
 - 2.15 Lyapunov-Schmidt procedure p. 101
 - 2.16 Nonlinear periodical vibrations of continuous structures p. 103
- 3 Singular Perturbation Problems p. 117
 - 3.1 The method of Gol'denveizer-Vishik-Lyusternik [313,645,672,673,674] p. 117
 - 3.2 Multiscale method p. 122
 - 3.3 Newton polygon and asymptotic integration parameters p. 125
 - 3.4 Stretched plate bending p. 131
 - 3.5 Simplification of the static equations of a cylindrical shell p. 133
 - 3.6 Boundary layer: Papkovitch approach p. 136
 - 3.7 Edge boundary layer p. 138
 - 3.8 Incorporating of the singular part of solution p. 140
 - 3.9 Plane theory of elasticity p. 140
 - 3.10 Asymptotic foundation model p. 144
 - 3.11 Vibrations of reinforced conical shells p. 149
- 4 Boundary Value Problems Of Isotropic Cylindrical Shells p. 157
 - 4.1 Governing relations p. 157
 - 4.2 Operator method p. 159
 - 4.3 Simplified boundary value problems p. 160
- 5 Boundary Value Problems - Orthotropic Shells p. 169
 - 5.1 Governing relations p. 169

- 5.2 Statical problems p. 173
- 5.3 Non-linear dynamical problems p. 182
- 5.4 Stability problems p. 189
- 5.5 Error estimation using Newton's method p. 197
- 6 Composite Boundary Value Problems - Isotropic Shells p. 201
- 6.1 Statical problems p. 202
- 6.2 Equations of higher order approximations p. 206
- 6.3 Error estimation p. 208
- 6.4 Dynamical problems p. 211
- 6.5 Non-linear dynamical problems p. 217
- 7 Composite Boundary Value Problems -Orthotropic Shells p. 223
- 7.1 Statical problems p. 223
- 7.2 Dynamical problems p. 234
- 7.3 Non-linear dynamical problems p. 235
- 7.4 Stability problems p. 239
- 8 Averaging p. 241
- 8.1 Two-scales approach p. 241
- 8.2 Visco-elastic problems and 'freezing' method p. 244
- 8.3 The successive change of variables p. 246
- 8.4 Application of the Lie groups p. 249
- 8.5 Whitham method (non-linear WKB approach) p. 256
- 9 Continualization p. 259
- 10 Honogenization p. 267
- 10.1 ODEs with rapidly oscillating coefficients p. 267
- 10.2 Axisymmetric bending of corrugated circle plate p. 272
- 10.3 Deformation of reinforced membrane p. 276
- 10.4 Ribbed strip - two-scale and Fourier homogenization p. 280
- 10.5 Ribbed plate - direct homogenization p. 284
- 10.6 Perforated membrane p. 292
- 10.7 Composite with periodic cubic inclusions p. 302
- 10.8 Torsion of bar with periodic parallelepiped inclusions p. 307
- 10.9 Solution of cell problem: perturbation of boundary form p. 313
- 10.10 Linear vibrations of a beam with concentrated masses and discrete supports p. 319
- 11 Intermediate Asymptotics - Dynamical Edge Effect Method p. 333
- 11.1 Linear preliminaries p. 333
- 11.2 Nonlinear beam vibrations p. 336
- 11.3 Nonlinear rectangular plate vibrations p. 340
- 11.4 Nonlinear shallow shell vibrations p. 345
- 11.5 Rayleigh-Ritz-Bolotin approach p. 353
- 11.6 Parallelogram plate vibrations p. 357
- 11.7 Sectorial plate nonlinear vibrations p. 360
- 12 Localization p. 363
- 12.1 Localization in linear chains p. 363
- 12.2 Localization in nonlinear chain p. 370

- 12.3 Localization of shell buckling p. 372
- 12.4 Localization of vibration in plates and shells p. 373
- 13 Improvement Of Perturbation Series p. 377
- 13.1 Padé approximants (PA) p. 377
- 13.2 The effect of autocorrection p. 379
- 13.3 Extending of perturbation series p. 381
- 13.4 Improvement iterational procedures convergence p. 384
- 13.5 Nonuniformities elimination p. 387
- 13.6 Error estimation of asymptotic approaches p. 388
- 13.7 Localized solutions and blow-up phenomenon p. 388
- 13.8 Gibbs phenomena p. 389
- 13.9 Boundary conditions perturbation method p. 392
- 13.10 Bifurcation problem p. 401
- 13.11 Borel summation and superasymptotics p. 402
- 13.12 Domb-Sykes plot [340, 659] p. 404
- 13.13 Extraction of singularities from perturbation series [340, 659] p. 406
- 13.14 Analytical continuation [407] p. 409
- 14 Matching Of Limiting Asymptotic Expansions p. 417
- 14.1 Two-point Padé approximants p. 417
- 14.2 Quasifractional approximants p. 424
- 14.3 Post-buckling behaviour of shallow convex shell p. 429
- 15 Complex Variables In Nonlinear Dynamics p. 435
- 15.1 Nonlinear oscillator with cubic anharmonicity p. 436
- 15.2 System of two weakly coupled nonlinear oscillators p. 447
- 15.3 Nonlinear dynamics of an infinite chain of coupled oscillators p. 453
- 15.4 Nonlinear dynamics of an infinite chain of coupled particles p. 460
- 16 Other Asymptotical Approaches p. 463
- 16.1 Matched asymptotic procedure p. 463
- 16.2 Hilbert transform p. 465
- 16.3 Normal forms in non-linear problems p. 467
- 16.4 WKB - approach p. 470
- 16.5 The WKB method and turning points p. 473
- 16.6 A distributional approach p. 478
- Afterword p. 483
- Asymptotics and Computers p. 483
- Are Asymptotic Methods a Panacea? p. 485
- References p. 489
- Subject index p. 529
